    - Dialplan Variables
    - Queue changes
    - mISDN channel driver (chan\_misdn) changes
    - thirdparty mISDN enhancements
    - libpri channel driver (chan\_dahdi) DAHDI changes
    - Asterisk Manager Interface
    - Channel Event Logging
    - CDR
    - Calendaring for Asterisk
    - Call Completion Supplementary Services for Asterisk
    - Multicast RTP Support
    - Security Events Framework
    - Fax
    - Miscellaneous
    - CLI Changes

## Overview

A listing of new capabilities in Asterisk 1.8

## In Brief

Asterisk 1.8 introduces a number of new features since the previous 1.6.2 release. Highlights include:

- Secure RTP (SRTP)
- IPv6 Support for SIP
- Connected Party Identification Support COLP and CONP.
- · Calendaring Integration for CalDAV, iCal, Exchange or EWS calendars
- A new call logging system, Channel Event Logging (CEL)
- Distributed Device State, including Message Waiting Indicator using Jabber/XMPP PubSub
- Call Completion Supplementary Services (CCSS) Support, including Call Completion on Busy Subscriber (CCBS) and Call Completion on No Response (CCNR)
- Advice of Charge, including AOC-S, AOC-D, and AOC-E Support
- Multicast RTP
- ISDN Q.SIG Call Rerouting and Call Deflection
- · Google Talk and Google Voice integration
- Audio Pitch Shifting (for fun and profit)

## **Detailed Listing**

#### **SIP Changes**

- Added preferred\_codec\_only option in sip.conf. This feature limits the joint codecs sent in response to an INVITE to the single most preferred codec.
- Added SIP\_CODEC\_OUTBOUND dialplan variable which can be used to set the codec

- to be used for the outgoing call. It must be one of the codecs configured for the device.
- Added tlsprivatekey option to sip.conf. This allows a separate .pem file
  to be used for holding a private key. If tlsprivatekey is not specified,
  tlscertfile is searched for both public and private key.
- Added tlsclientmethod option to sip.conf. This allows the protocol for outbound client connections to be specified.
- The sendrpid parameter has been expanded to include the options 'rpid' and 'pai'. Setting sendrpid to 'rpid' will cause Remote-Party-ID header to be sent (equivalent to setting sendrpid=yes) and setting sendrpid to 'pai' will cause P-Asserted-Identity header to be sent.
- The 'ignoresdpversion' behavior has been made automatic when the SDP received is in response to a T.38 re-INVITE that Asterisk initiated. In this situation, since the call will fail if Asterisk does not process the incoming SDP, Asterisk will accept the SDP even if the SDP version number is not properly incremented, but will generate a warning in the log indicating that the SIP peer that sent the SDP should have the 'ignoresdpversion' option set.
- The 'nat' option has now been been changed to have yes, no, force\_rport, and comedia as valid values. Setting it to yes forces RFC 3581 behavior and enables symmetric RTP support. Setting it to no only enables RFC 3581 behavior if the remote side requests it and disables symmetric RTP support. Setting it to force\_rport forces RFC 3581 behavior and disables symmetric RTP support. Setting it to comedia enables RFC 3581 behavior if the remote side requests it and enables symmetric RTP support.
- Slave SIP channels now set HASH(SIP\_CAUSE,<slave-channel-name>) on each response. This permits the master channel to know how each channel dialled in a multi-channel setup resolved in an individual way.
- Added 'externtcpport' and 'externtlsport' options to allow custom port configuration for the externip and externhost options when tcp or tls is used.
- Added support for message body (stored in content variable) to SIP NOTIFY message accessible via AMI and CLI.
- Added 'media\_address' configuration option which can be used to explicitly specify the IP address to use in the SDP for media (audio, video, and text) streams.
- Added 'unsolicited\_mailbox' configuration option which specifies the virtual mailbox that the new/old count should be stored on if an unsolicited MWI NOTIFY message is received.
- Added 'use\_q850\_reason' configuration option for generating and parsing
  if available Reason: Q.850;cause=<cause code> header. It is implemented
  in some gateways for better passing PRI/SS7 cause codes via SIP.
- When dialing SIP peers, a new component may be added to the end of the dialstring to indicate that a specific remote IP address or host should be used when dialing the particular peer. The dialstring format is SIP/peer/exten/host\_or\_IP.
- SRTP SDES support for encrypting calls to/from Asterisk over SIP. The
  ability to selectively force bridged channels to also be encrypted is also
  implemented. Branching in the dialplan can be done based on whether or not
  a channel has secure media and/or signaling.
- Added directmediapermit/directmediadeny to limit which peers can send direct media to each other
- Added the 'snom\_aoc\_enabled' option to turn on support for sending Advice of Charge messages to snom phones.
- Added support for G.719 media streams.
- Added support for 16khz signed linear media streams.
- SIP is now able to bind to and communicate with IPv6 addresses. In addition, RTP has been outfitted with the same abilities.
- Added support for setting the Max-Forwards: header in SIP requests. Setting is available in device configurations as well as in the dial plan.
- Addition of the 'subscribe\_network\_change' option for turning on and off res\_stun\_monitor module support in chan\_sip.
- Addition of the 'auth\_options\_requests' option for turning on and off authentication for OPTIONS requests in chan sip.

#### **IAX2 Changes**

- Added rtsavesysname option into iax.conf to allow the systname to be saved on realtime updates.
- Added the ability for chan\_iax2 to inform the dialplan whether or not encryption is being used. This interoperates with the SIP SRTP implementation so that a secure SIP call can be bridged to a secure IAX call when the dialplan requires bridged channels to be "secure".
- Addition of the 'subscribe\_network\_change' option for turning on and off res\_stun\_monitor module support in chan\_iax.

## **MGCP Changes**

- Added ability to preset channel variables on indicated lines with the setvar configuration option. Also, clearvars=all resets the list of variables back to none.
- PacketCable NCS 1.0 support has been added for Docsis/Eurodocsis Networks.
   See configs/res\_pktccops.conf for more information.

## XMPP Google Talk/Jingle changes

- · Added the externip option to gtalk.conf.
- Added the stunaddr option to gtalk.conf which allows for the automatic retrieval of the external ip from a stun server.

## **Applications**

- Added 'p' option to PickupChan() to allow for picking up channel by the first match to a partial channel name.
- Added .m3u support for Mp3Player application.
- Added progress option to the app\_dial D() option. When progress DTMF is
  present, those values are sent immediately upon receiving a PROGRESS message
  regardless if the call has been answered or not.
- Added functionality to the app\_dial F() option to continue with execution at the current location when no parameters are provided.
- Added the 'a' option to app\_dial to answer the calling channel before any announcements or macros are executed.
- Modified app\_dial to set answertime when the called channel answers even if the called channel hangs up during playback of an announcement.
- Modified app\_dial 'r' option to support an additional parameter to play an indication tone from indications.conf
- Added c() option to app\_chanspy. This option allows custom DTMF to be set to cycle through the next available channel. By default this is still 1\*\*.
- Added x() option to app\_chanspy. This option allows DTMF to be set to exit the application.
- The Voicemail application has been improved to automatically ignore messages that only contain silence.
- If you set maxmsg to 0 in voicemail.conf, Voicemail will consider the associated mailbox(es) to be greetings-only.
- The ChanSpy application now has the 'S' option, which makes the application automatically exit once it hits a point where no more channels are available to spy on.
- The ChanSpy application also now has the 'E' option, which spies on a single channel and exits when that channel hangs up.
- The MeetMe application now turns on the DENOISE() function by default, for each participant. In our tests, this has significantly decreased background noise (especially noisy data centers).
- Voicemail now permits storage of secrets in a separate file, located in the spool directory of each individual user. The control for this is located in the "passwordlocation" option in voicemail.conf. Please see the sample configuration for more information.
- The ChanlsAvail application now exposes the returned cause code using a separate variable, AVAILCAUSECODE, instead of overwriting the device state in AVAILSTATUS.
- Added 'd' option to app\_followme. This option disables the "Please hold" announcement.
- Added 'y' option to app\_record. This option enables a mode where any DTMF digit received will terminate recording.
- Voicemail now supports per mailbox settings for folders when using IMAP storage.
   Previously the folder could only be set per context, but has now been extended using the imapfolder option.
- Voicemail now supports per mailbox settings for nextaftercmd and minsecs.
- Voicemail now allows the pager date format to be specified separately from the email date format.
- New applications JabberJoin, JabberLeave, and JabberSendGroup have been added to allow joining, leaving, and sending text to group chats.
- MeetMe has a new option 'G' to play an announcement before joining a conference.
- Page has a new option 'A(x)' which will playback an announcement simultaneously to all paged phones (and optionally excluding the caller's one using the new option 'n') before the call is bridged.
- The 'f' option to Dial has been augmented to take an optional argument. If no argument is provided, the 'f' option works as it always has. If an argument is provided, then the connected party information of all outgoing channels created

- during the Dial will be set to the argument passed to the 'f' option.
- Dial now inherits the GOSUB\_RETVAL from the peer, when the U() option runs a
  Gosub on the peer.
- The OSP lookup application adds in/outbound network ID, optional security, number portability, QoS reporting, destination IP port, custom info and service type features.
- Added new application VMSayName that will play the recorded name of the voicemail user if it exists, otherwise will play the mailbox number.
- Added custom device states to ConfBridge bridges. Use 'confbridge:<name>' to retrieve state for a particular bridge, where <name> is the conference name
- app\_directory now allows exiting at any time using the operator or pound key.
- Voicemail now supports setting a locale per-mailbox.
- Two new applications are provided for declining counting phrases in multiple languages. See the application notes for SayCountedNoun and SayCountedAdj for more information.
- Voicemail now runs the externnotify script when pollmailboxes is activated and notices a change.
- Voicemail now includes rdnis within msgXXXX.txt file.
- Added 'D' command to ExternalIVR full details in http://wiki.asterisk.org

#### **Dialplan Functions**

- SRVQUERY and SRVRESULT functions added. This can be used to query and iterate
  over SRV records associated with a specific service. From the CLI, type
  'core show function SRVQUERY' and 'core show function SRVRESULT' for more
  details on how these may be used.
- PITCH\_SHIFT dialplan function added. This function can be used to modify the pitch of a channel's tx and rx audio streams.
- Added new dialplan functions CONNECTEDLINE and REDIRECTING which permits setting various connected line and redirecting party information.
- CALLERID and CONNECTEDLINE dialplan functions have been extended to support ISDN subaddressing.
- The CHANNEL() function now supports the "name" and "checkhangup" options.
- For DAHDI channels, the CHANNEL() dialplan function now allows the dialplan to request changes in the configuration of the active echo canceller on the channel (if any), for the current call only. The syntax is:

exten => s,n,Set(CHANNEL(echocan mode)=off)

The possible values are:

on - normal mode (the echo canceller is actually reinitialized) off - disabled

fax - FAX/data mode (NLP disabled if possible, otherwise completely disabled)

voice - voice mode (returns from FAX mode, reverting the changes that were made when FAX mode was requested)

- Added new dialplan function MASTER\_CHANNEL(), which permits retrieving
  and setting variables on the channel which created the current channel.
  Administrators should take care to avoid naming conflicts, when multiple
  channels are dialled at once, especially when used with the Local channel
  construct (which all could set variables on the master channel). Usage
  of the HASH() dialplan function, with the key set to the name of the slave
  channel, is one approach that will avoid conflicts.
- Added new dialplan function MUTEAUDIO() for muting inbound and/or outbound audio in a channel.
- func\_odbc now allows multiple row results to be retrieved without using mode=multirow. If rowlimit is set, then additional rows may be retrieved from the same query by using the name of the function which retrieved the first row as an argument to ODBC FETCH().
- Added JABBER\_RECEIVE, which permits receiving XMPP messages from the dialplan. This function returns the content of the received message.
- Added REPLACE, which searches a given variable name for a set of characters, then either replaces them with a single character or deletes them.
- Added PASSTHRU, which literally passes the same argument back as its return value. The intent is to be able to use a literal string argument to

- functions that currently require a variable name as an argument.
- HASH-associated variables now can be inherited across channel creation, by prefixing the name of the hash at assignment with the appropriate number of underscores, just like variables.
- GROUP\_MATCH\_COUNT has been improved to allow regex matching on category
- CHANNEL(secure\_bridge\_signaling) and CHANNEL(secure\_bridge\_media) to set/get
  whether or not channels that are bridged to the current channel will be
  required to have secure signaling and/or media.
- CHANNEL(secure\_signaling) and CHANNEL(secure\_media) to get whether or not the current channel has secure signaling and/or media.
- For DAHDI/ISDN channels, the CHANNEL() dialplan function now supports the "no\_media\_path" option.

Returns "0" if there is a B channel associated with the call.

- Returns "1" if no B channel is associated with the call. The call is either on hold or is a call waiting call.
- Added option to dialplan function CDR(), the 'f' option allows for high resolution times for billsec and duration fields.
- FILE() now supports line-mode and writing.
- Added FIELDNUM(), which returns the 1-based offset of a field in a list.
- FRAME\_TRACE(), for tracking internal ast\_frames on a channel.

## **Dialplan Variables**

- Added DYNAMIC\_FEATURENAME which holds the last triggered dynamic feature.
- Added DYNAMIC\_PEERNAME which holds the unique channel name on the other side and is set when a dynamic feature is triggered.
- Added PARKINGLOT which can be used with parkeddynamic feature.conf option to dynamically create a new parking lot matching the value this varible is set to.
- Added PARKINGDYNAMIC which represents the template parkinglot defined in features.conf that should be the base for dynamic parkinglots.
- Added PARKINGDYNCONTEXT which tells what context a newly created dynamic parkinglot should have.
- Added PARKINGDYNPOS which holds what parking positions a dynamic parkinglot should have.

## **Queue changes**

- Added "ready" option to QUEUE\_MEMBER counting to count free agents whose wrap-up timeout has expired.
- Added 'R' option to app\_queue. This option stops moh and indicates ringing
  to the caller when an Agent's phone is ringing. This can be used to indicate
  to the caller that their call is about to be picked up, which is nice when
  one has been on hold for an extened period of time.
- A new config option, penaltymemberslimit, has been added to queues.conf.
   When set this option will disregard penalty settings when a queue has too few members.
- A new option, 'I' has been added to both app\_queue and app\_dial.
   By setting this option, Asterisk will not update the caller with connected line changes or redirecting party changes when they occur.
- A 'relative-peroidic-announce' option has been added to queues.conf. When
  enabled, this option will cause periodic announce times to be calculated
  from the end of announcements rather than from the beginning.
- The autopause option in queues.conf can be passed a new value, "all." The
  result is that if a member becomes auto-paused, he will be paused in all
  queues for which he is a member, not just the queue that failed to reach
  the member.
- Added dialplan function QUEUE\_EXISTS to check if a queue exists
- The queue logger now allows events to optionally propagate to a file, even when realtime logging is turned on. Additionally, realtime logging supports sending the event arguments to 5 individual fields, although it will fallback to the previous data definition, if the new table layout is not found.

#### mISDN channel driver (chan\_misdn) changes

- Added display\_connected parameter to misdn.conf to put a display string in the CONNECT message containing the connected name and/or number if the presentation setting permits it.
- Added display\_setup parameter to misdn.conf to put a display string

- in the SETUP message containing the caller name and/or number if the presentation setting permits it.
- Made misdn.conf parameters localdialplan and cpndialplan take a -1 to indicate the dialplan settings are to be obtained from the asterisk channel
- Made misdn.conf parameter callerid accept the "name" <number> format used by the rest of the system.
- Made use the nationalprefix and internationalprefix misdn.conf parameters to prefix any received number from the ISDN link if that number has the corresponding Type-Of-Number. NOTE: This includes comparing the incoming call's dialed number against the MSN list.
- Added the following new parameters: unknownprefix, netspecificprefix, subscriberprefix, and abbreviatedprefix in misdn.conf to prefix any received number from the ISDN link if that number has the corresponding Type-Of-Number.
- Added new dialplan application misdn\_command which permits controlling the CCBS/CCNR functionality.
- Added new dialplan function mISDN\_CC which permits retrieval of various values from an active call completion record.
- For PTP, you should manually send the COLR of the redirected-to party
  for an incomming redirected call if the incoming call could experience
  further redirects. Just set the REDIRECTING(to-num,i) = \${EXTEN} and
  set the REDIRECTING(to-pres) to the COLR. A call has been redirected
  if the REDIRECTING(from-num) is not empty.
- For outgoing PTP redirected calls, you now need to use the inhibit(i) option on all of the REDIRECTING statements before dialing the redirected-to party. You still have to set the REDIRECTING(to-xxx,i) and the REDIRECTING(from-xxx,i) values. The PTP call will update the redirecting-to presentation (COLR) when it becomes available.
- Added outgoing\_colp parameter to misdn.conf to filter outgoing COLP information.

## thirdparty mISDN enhancements

mISDN has been modified by Digium, Inc. to greatly expand facility message support to allow:

- Enhanced COLP support for call diversion and transfer.
- CCBS/CCNR support.

The latest modified mISDN v1.1.x based version is available at: http://svn.digium.com/svn/thirdparty/mISDN/trunk

http://svn.digium.com/svn/thirdparty/mISDN/trunk

Tagged versions of the modified mISDN code are available under:

http://svn.digium.com/svn/thirdparty/mISDN/tags http://svn.digium.com/svn/thirdparty/mISDNuser/tags

#### libpri channel driver (chan dahdi) DAHDI changes

- The channel variable PRIREDIRECTREASON is now just a status variable and it is also deprecated. Use the REDIRECTING(reason) dialplan function to read and alter the reason.
- For Q.SIG and ETSI PRI/BRI-PTP, you should manually send the COLR of the redirected-to party for an incomming redirected call if the incoming call could experience further redirects. Just set the REDIRECTING(to-num,i) = CALLERID(dnid) and set the REDIRECTING(to-pres) to the COLR. A call has been redirected if the REDIRECTING(count) is not zero.
- For outgoing Q.SIG and ETSI PRI/BRI-PTP redirected calls, you need to
  use the inhibit(i) option on all of the REDIRECTING statements before
  dialing the redirected-to party. You still have to set the
  REDIRECTING(to-xxx,i) and the REDIRECTING(from-xxx,i) values. The call
  will update the redirecting-to presentation (COLR) when it becomes available.
- Added the ability to ignore calls that are not in a Multiple Subscriber Number (MSN) list for PTMP CPE interfaces.

- Added dynamic range compression support for dahdi channels. It is configured via the rxdrc and txdrc parameters in chan\_dahdi.conf.
- Added support for ISDN calling and called subaddress with partial support for connected line subaddress.
- Added support for BRI PTMP NT mode. (Requires latest LibPRI.)
- Added handling of received HOLD/RETRIEVE messages and the optional ability to transfer a held call on disconnect similar to an analog phone.
- Added CallRerouting/CallDeflection support for Q.SIG, ETSI PTP, ETSI PTMP. Will reroute/deflect an outgoing call when receive the message. Can use the DAHDISendCallreroutingFacility to send the message for the supported switches.
- Added standard location to add options to chan\_dahdi dialing: Dial(DAHDI/g1[/extension[/options]])

Current options:

K(<keypad\_digits>)

R Reverse charging indication

- Added Reverse Charging Indication (Collect calls) send/receive option. Send reverse charging in SETUP message with the chan\_dahdi R dialing option. Dial(DAHDI/g1/extension/R) Access received reverse charge in SETUP message by: \${CHANNEL(reversecharge)} (requires latest LibPRI)
- Added ability to send/receive keypad digits in the SETUP message. Send keypad digits in SETUP message with the chan\_dahdi K(<keypad\_digits>) dialing option. Dial(DAHDI/g1/[~mdavenport:extension]/K(<keypad\_digits>)) Access any received keypad digits in SETUP message by: \${CHANNEL(keypad\_digits)} (requires latest LibPRI)
- Added ability to send and receive ETSI Explicit Call Transfer (ECT) messages to eliminate tromboned calls. A tromboned call goes out an interface and comes back into the same interface. Tromboned calls happen because of call routing, call deflection, call forwarding, and call transfer.
- Added the ability to send and receive ETSI Advice-Of-Charge messages.
- Added the ability to support call waiting calls. (The SETUP has no B channel
- Added Malicious Call ID (MCID) event to the AMI call event class.
- Added Message Waiting Indication (MWI) support for ISDN PTMP endpoints (phones).

## **Asterisk Manager Interface**

- The Hangup action now accepts a Cause header which may be used to set the channel's hangup cause.
- sslprivatekey option added to manager.conf and http.conf. Adds the ability to specify a separate .pem file to hold a private key. By default sslcert is used to hold both the public and private key.
- Options in manager.conf and http.conf with the 'ssl' prefix have been replaced for options containing the 'tls' prefix. For example, 'sslenable' is now 'tlsenable'. This has been done in effort to keep ssl and tls options consistent across all .conf files. All affected sample.conf files have been modified to reflect this change. Previous options such as 'sslenable' still work, but options with the 'tls' prefix are preferred.
- Added a MuteAudio AMI action for muting inbound and/or outbound audio in a channel. (res mutestream.so)
- The configuration file manager.conf now supports a channelvars option, which specifies a list of channel variables to include in each channel-oriented event.
- The redirect command now has new parameters ExtraContext, ExtraExtension, and ExtraPriority to allow redirecting the second channel to a different location than the first.
- Added new event "JabberStatus" in the Jabber module to monitor buddies status.
- Added a "MixMonitorMute" AMI action for muting inbound and/or outbound audio in a MixMonitor recording.
- The 'iax2 show peers' output is now similar to the expected output of 'sip show peers'.
- Added Advice-Of-Charge events (AOC-S, AOC-D, and AOC-E) in the new aoc event class.
- Added Advice-Of-Charge manager action, AOCMessage, for generating AOC-D and AOC-E messages on a channel.
- A DBGetComplete event now follows a DBGetResponse, to make the DBGet action conform more closely to similar events.
- Added a new eventfilter option per user to allow whitelisting and blacklisting
- Added optional parkinglot variable for park command.

#### **Channel Event Logging**

 A new interface, CEL, is introduced here. CEL logs single events, much like the AMI, but it differs from the AMI in that it logs to db backends much like CDR does; is based on the event subsystem introduced by Russell, and can share in all its benefits; allows multiple backends to operate like CDR; is specialized to event data that would be of concern to billing sytems, like CDR. Backends for logging and accounting calls have been produced, but a new CDR backend is still in development.

#### **CDR**

- 'linkedid' and 'peeraccount' are new CDR fields available to CDR aficionados.
   linkedid is based on uniqueID, but spreads to other channels as transfers, dials,
   etc are performed. Thus the pieces of CDR can be grouped into multilegged sets.
- Multiple files and formats can now be specified in cdr\_custom.conf.
- cdr\_syslog has been added which allows CDRs to be written directly to syslog.
   See configs/cdr\_syslog.conf.sample for more information.
- A 'sequence' field has been added to CDRs which can be combined with linkedid or uniqueid to uniquely identify a CDR.
- Handling of billsec and duration field has changed. If your table definition specifies those fields as float, double or similar they will now be logged with microsecond accuracy instead of a whole integer.

## **Calendaring for Asterisk**

A new set of modules were added supporing calendar integration with Asterisk.
 Dialplan functions for reading from and writing to calendars are included,
 as well as the ability to execute dialplan logic upon calendar event notifications.
 iCalendar, CalDAV, and Exchange Server calendars (via res\_calendar\_exchange for
 Exchange Server 2003 with no write or attendee support, and res\_calendar\_ews for
 Exchange Server 2007+ with full write and attendee support) are supported (Exchange
 2003 support does not support forms-based authentication).

## **Call Completion Supplementary Services for Asterisk**

 Call completion support has been added for SIP, DAHDI/ISDN, and DAHDI/analog. DAHDI/ISDN supports call completion for the following switch types: Eurolsdn(ETSI) for PTP and PTMP modes, and Qsig. See http://wiki.asterisk.org for details.

## **Multicast RTP Support**

A new RTP engine and channel driver have been added which supports Multicast RTP.
 The channel driver can be used with the Page application to perform multicast RTP paging. The dial string format is: MulticastRTP/<type>/<destination>/<control address> Type can be either basic or linksys.
 Destination is the IP address and port for the RTP packets.
 Control address is specific to the linksys type and is used for sending the control packets unique to them.

## **Security Events Framework**

 Asterisk has a new C API for reporting security events. The module res\_security\_log sends these events to the "security" logger level. Currently, AMI is the only Asterisk component that reports security events. However, SIP support will be coming soon. For more information on the security events framework, see the "Security Events" chapter of the included documentation - doc/AST.pdf.

#### **Fax**

- A technology independent fax frontend (res\_fax) has been added to Asterisk.
- A spandsp based fax backend (res\_fax\_spandsp) has been added.
- The app\_fax module has been deprecated in favor of the res\_fax module and

- the new res\_fax\_spandsp backend.
- The SendFAX and ReceiveFAX applications now send their log messages to a 'fax' logger level, instead of to the generic logger levels. To see these messages, the system's logger.conf file will need to direct the 'fax' logger level to one or more destinations; the logger.conf.sample file includes an example of how to do this. Note that if the 'fax' logger level is not directed to at least one destination, log messages generated by these applications will be lost, and that if the 'fax' logger level is directed to the console, the 'core set verbose' and 'core set debug' CLI commands will have no effect on whether the messages appear on the console or not.

#### Miscellaneous

- The transmit\_silence\_during\_record option in asterisk.conf.sample has been removed.
   Now, in order to enable transmitting silence during record the transmit\_silence option should be used. transmit\_silence\_during\_record remains a valid option, but defaults to the behavior of the transmit\_silence option.
- Addition of the Unit Test Framework API for managing registration and execution
  of unit tests with the purpose of verifying the operation of C functions.
- SendText is now implemented in chan\_gtalk and chan\_jingle. It will simply send XMPP text messages to the remote JID.
- Modules.conf has a new option "require" that marks a module as critical for the execution of Asterisk.
  - If one of the required modules fail to load, Asterisk will exit with a return code set to 2.
- An 'X' option has been added to the asterisk application which enables #exec support.
   This allows #exec to be used in asterisk.conf.
- jabber.conf supports a new option auth\_policy that toggles auto user registration.
- A new lockconfdir option has been added to asterisk.conf to protect the configuration directory (/etc/asterisk by default) during reloads.
- The parkeddynamic option has been added to features.conf to enable the creation of dynamic parkinglots.
- chan\_dahdi now supports reporting alarms over AMI either by channel or span via the reportalarms config option.
- chan\_dahdi supports dialing configuring and dialing by device file name.
   DAHDI/span-name!local!1 will use /dev/dahdi/span-name/local/1. Likewise it may appear in chan dahdi.conf as 'channel => span-name!local!1'.
- A new options for chan\_dahdi.conf: 'ignore\_failed\_channels'. Boolean.
   False by default. If set, chan\_dahdi will ignore failed 'channel' entries.
   Handy for the above name-based syntax as it does not depend on initialization order.
- The Realtime dialplan switch now caches entries for 1 second. This provides a significant increase in performance (about 3X) for installations using this switchtype.
- Distributed devicestate now supports the use of the XMPP protocol, in addition to AIS. For more information, please see http://wiki.asterisk.org
- The addition of G.719 pass-through support.
- Added support for 16khz Speex audio. This can be enabled by using 'allow=speex16' during device configuration.
- The UNISTIM channel driver (chan\_unistim) has been updated to support devices that have less than 3 lines on the LCD.
- Realtime now supports database failover. See the sample extconfig.conf for details.
- The addition of improved translation path building for wideband codecs. Sample rate changes during translation are now avoided unless absolutely necessary.
- The addition of the res\_stun\_monitor module for monitoring and reacting to network changes while behind a NAT.

#### **CLI Changes**

- The 'core set debug' and 'core set verbose' commands, in previous versions, could optionally accept a filename, to apply the setting only to the code generated from that source file when Asterisk was built. However, there are some modules in Asterisk that are composed of multiple source files, so this did not result in the behavior that users expected. In this version, 'core set debug' and 'core set verbose' can optionally accept module names instead (with or without the .so extension), which applies the setting to the entire module specified, regardless of which source files it was built from.
- New 'manager show settings' command showing the current settings loaded from manager.conf.
- Added 'all' keyword to the CLI command "channel request hangup" so that you can send the channel hangup request to all channels.
- Added a "core reload" CLI command that executes a global reload of Asterisk.

# **Asterisk Command Reference**

This page is the top level page for all of the Asterisk applications, functions, manager actions, and AGI commands that are kept in the XML based documentation that is included with Asterisk.

AGI Commands
AGICommand_ANSWER
ANSWER
Synopsis
Answer channel
Description
Answers channel if not already in answer state. Returns -1 on channel failure, or 0 if successful.
Syntax
ANSWER
Arguments
See Also
AGICommand_HANGUP
Import Version
This documentation was imported from Asterisk version SVN-branch-1.8-r311874.
AGICommand_ASYNCAGI BREAK
ASYNCAGI BREAK
Synopsis
Interrupts Async AGI
Description
Interrupts expected flow of Async AGI commands and returns control to previous source

Syntax

(typically, the PBX dialplan).

	ASYNCAGI BREAK
Arg	uments
See	e Also
AG	ICommand_HANGUP
lmp	port Version
Thi	s documentation was imported from Asterisk version SVN-branch-1.8-r311874.
ΑG	GICommand_CHANNEL STATUS
СН	ANNEL STATUS
Syr	nopsis
Re	turns status of the connected channel.
Des	scription
	turns the status of the specified <i>channelname</i> . If no channel name is given then returns the tus of the current channel.
Re	turn values:
Ch	annel is down and available.
Ch	annel is down, but reserved.
Ch	annel is off hook.
Dig	its (or equivalent) have been dialed.
Lin	e is ringing.
Re	mote end is ringing.
Lin	e is up.

Syntax

Line is busy.

CHANNEL STATUS [CHANNELNAME]

Arguments

CHANNELNAME

#### See Also

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_CONTROL STREAM FILE

#### **CONTROL STREAM FILE**

## Synopsis

Sends audio file on channel and allows the listener to control the stream.

#### Description

Send the given file, allowing playback to be controlled by the given digits, if any. Use double quotes for the digits if you wish none to be permitted. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed, or -1 on error or if the channel was disconnected.

## **Syntax**

CONTROL STREAM FILE FILENAME ESCAPE\_DIGITS [SKIPMS] [FFCHAR] [REWCHR] [PAUSECHR]

#### Arguments

- FILENAME The file extension must not be included in the filename.
- ESCAPE\_DIGITS
- SKIPMS
- FFCHAR Defaults to \*
- REWCHR Defaults to #
- PAUSECHR

## See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_DATABASE DEL

## **DATABASE DEL**

## Synopsis

Removes database key/value

#### Description

Deletes an entry in the Asterisk database for a given family and key.

Returns 1 if successful, 0 otherwise.

#### Syntax

DATABASE DEL FAMILY KEY

#### Arguments

- FAMILY
- KEY

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_DATABASE DELTREE

#### **DATABASE DELTREE**

## Synopsis

Removes database keytree/value

#### Description

Deletes a family or specific keytree within a family in the Asterisk database.

Returns 1 if successful, 0 otherwise.

## **Syntax**

DATABASE DELTREE FAMILY [KEYTREE]

#### Arguments

- FAMILY
- KEYTREE

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_DATABASE GET

#### **DATABASE GET**

#### Synopsis

Gets database value

## Description

Retrieves an entry in the Asterisk database for a given *family* and *key*.

Returns 0 if key is not set. Returns 1 if key is set and returns the variable in parenthesis.

Example return code: 200 result=1 (testvariable)

## Syntax

DATABASE GET FAMILY KEY

#### Arguments

- FAMILY
- KEY

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_DATABASE PUT

## **DATABASE PUT**

## Synopsis

Adds/updates database value

## Description

Adds or updates an entry in the Asterisk database for a given family, key, and value.

Returns 1 if successful, 0 otherwise.

#### Syntax

DATABASE PUT FAMILY KEY VALUE

#### Arguments

- FAMILY
- KEY
- VALUE

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_EXEC

## **EXEC**

#### Synopsis

**Executes a given Application** 

#### Description

Executes application with given options.

Returns whatever the application returns, or -2 on failure to find application.

#### Syntax

EXEC APPLICATION OPTIONS

## Arguments

- APPLICATION
- OPTIONS

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_GET DATA

## **GET DATA**

#### Synopsis

Prompts for DTMF on a channel

## Description

Stream the given file, and receive DTMF data.

Returns the digits received from the channel at the other end.

#### Syntax

## GET DATA FILE [TIMEOUT] [MAXDIGITS]

#### Arguments

- FILE
- TIMEOUT
- MAXDIGITS

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_GET FULL VARIABLE

#### **GET FULL VARIABLE**

#### Synopsis

Evaluates a channel expression

## Description

Returns 0 if *variablename* is not set or channel does not exist. Returns 1 if *variablename* is set and returns the variable in parenthesis. Understands complex variable names and builtin variables, unlike GET VARIABLE.

Example return code: 200 result=1 (testvariable)

## **Syntax**

GET FULL VARIABLE VARIABLENAME [CHANNEL\_NAME]

#### Arguments

- VARIABLENAME
- CHANNEL\_NAME

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_GET OPTION

## **GET OPTION**

#### Synopsis

Stream file, prompt for DTMF, with timeout.

## Description

Behaves similar to STREAM FILE but used with a timeout option.

## **Syntax**

GET OPTION FILENAME ESCAPE\_DIGITS [TIMEOUT]

## Arguments

- FILENAME
- ESCAPE\_DIGITS
- TIMEOUT

#### See Also

## AGICommand\_STREAM FILE

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_GET VARIABLE

#### **GET VARIABLE**

## Synopsis

Gets a channel variable.

## Description

Returns 0 if *variablename* is not set. Returns 1 if *variablename* is set and returns the variable in parentheses.

Example return code: 200 result=1 (testvariable)

#### Syntax

GET VARIABLE VARIABLENAME

#### Arguments

• VARIABLENAME

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_GOSUB

#### **GOSUB**

#### Synopsis

Cause the channel to execute the specified dialplan subroutine.

#### Description

Cause the channel to execute the specified dialplan subroutine, returning to the dialplan with execution of a Return().

## **Syntax**

GOSUB CONTEXT EXTENSION PRIORITY [OPTIONAL-ARGUMENT]

#### Arguments

- CONTEXT
- EXTENSION
- PRIORITY
- OPTIONAL-ARGUMENT

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_HANGUP

#### **HANGUP**

#### Synopsis

Hangup a channel.

## Description

Hangs up the specified channel. If no channel name is given, hangs up the current channel

## **Syntax**

HANGUP [CHANNELNAME]

#### Arguments

• CHANNELNAME

# See Also Import Version This documentation was imported from Asterisk version SVN-branch-1.8-r323234. AGICommand\_NOOP **NOOP** Synopsis Does nothing. Description Does nothing. Syntax NOOP Arguments See Also Import Version This documentation was imported from Asterisk version SVN-branch-1.8-r311874. AGICommand\_RECEIVE CHAR RECEIVE CHAR Synopsis Receives one character from channels supporting it. Description Receives a character of text on a channel. Most channels do not support the reception of text. Returns the decimal value of the character if one is received, or 0 if the channel does not support text reception. Returns -1 only on error/hangup.

Syntax

RECEIVE CHAR TIMEOUT

## Arguments

• TIMEOUT - The maximum time to wait for input in milliseconds, or 0 for infinite. Most channels

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **AGICommand RECEIVE TEXT**

#### **RECEIVE TEXT**

#### Synopsis

Receives text from channels supporting it.

#### Description

Receives a string of text on a channel. Most channels do not support the reception of text. Returns -1 for failure or 1 for success, and the string in parenthesis.

#### Syntax

RECEIVE TEXT TIMEOUT

#### Arguments

• TIMEOUT - The timeout to be the maximum time to wait for input in milliseconds, or 0 for infinite.

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_RECORD FILE

#### **RECORD FILE**

#### Synopsis

Records to a given file.

## Description

Record to a file until a given dtmf digit in the sequence is received. Returns -1 on hangup or error. The format will specify what kind of file will be recorded. The *timeout* is the maximum record time in milliseconds, or -1 for no *timeout*. *offset samples* is optional, and, if provided, will seek to the offset without exceeding the end of the file. *silence* is the number of seconds of silence allowed before the function returns despite the lack of dtmf digits or reaching *timeout*. *silence* value must be preceded by s= and is also optional.

#### **Syntax**

RECORD FILE FILENAME FORMAT ESCAPE\_DIGITS TIMEOUT [OFFSET\_SAMPLES]
[BEEP] [S=SILENCE]

## Arguments

- FILENAME
- FORMAT
- ESCAPE\_DIGITS
- TIMEOUT
- OFFSET\_SAMPLES
- BEEP
- S=SILENCE

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY ALPHA

## **SAY ALPHA**

#### Synopsis

Says a given character string.

#### Description

Say a given character string, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

## **Syntax**

SAY ALPHA NUMBER ESCAPE\_DIGITS

#### Arguments

- NUMBER
- ESCAPE\_DIGITS

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY DATE

## **SAY DATE**

#### Synopsis

Says a given date.

#### Description

Say a given date, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

#### Syntax

SAY DATE DATE ESCAPE\_DIGITS

#### Arguments

- DATE Is number of seconds elapsed since 00:00:00 on January 1, 1970. Coordinated Universal Time (UTC).
- ESCAPE\_DIGITS

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY DATETIME

#### SAY DATETIME

#### Synopsis

Says a given time as specified by the format given.

#### Description

Say a given time, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

#### **Syntax**

SAY DATETIME TIME ESCAPE\_DIGITS [FORMAT] [TIMEZONE]

#### Arguments

- TIME Is number of seconds elapsed since 00:00:00 on January 1, 1970, Coordinated Universal Time (UTC)
- ESCAPE\_DIGITS
- FORMAT Is the format the time should be said in. See voicemail.conf (defaults to ABdY 'digits/at' IMp).
- TIMEZONE Acceptable values can be found in /usr/share/zoneinfo Defaults to machine default.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **AGICommand SAY DIGITS**

#### **SAY DIGITS**

#### Synopsis

Says a given digit string.

#### Description

Say a given digit string, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

#### **Syntax**

SAY DIGITS NUMBER ESCAPE\_DIGITS

#### Arguments

- NUMBER
- ESCAPE\_DIGITS

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY NUMBER

#### **SAY NUMBER**

#### Synopsis

Says a given number.

## Description

Say a given number, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

## **Syntax**

SAY NUMBER NUMBER ESCAPE\_DIGITS [GENDER]

#### Arguments

- NUMBER
- ESCAPE\_DIGITS
- GENDER

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY PHONETIC

#### **SAY PHONETIC**

#### Synopsis

Says a given character string with phonetics.

#### Description

Say a given character string with phonetics, returning early if any of the given DTMF digits are received on the channel. Returns 0 if playback completes without a digit pressed, the ASCII numerical value of the digit if one was pressed, or -1 on error/hangup.

#### Syntax

SAY PHONETIC STRING ESCAPE\_DIGITS

#### Arguments

- STRING
- ESCAPE\_DIGITS

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SAY TIME

## **SAY TIME**

## Synopsis

Says a given time.

#### Description

Say a given time, returning early if any of the given DTMF digits are received on the channel.

Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed or -1 on error/hangup.

#### Syntax

SAY TIME TIME ESCAPE\_DIGITS

#### Arguments

- TIME Is number of seconds elapsed since 00:00:00 on January 1, 1970. Coordinated Universal Time (UTC).
- ESCAPE\_DIGITS

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SEND IMAGE

### **SEND IMAGE**

#### Synopsis

Sends images to channels supporting it.

#### Description

Sends the given image on a channel. Most channels do not support the transmission of images. Returns 0 if image is sent, or if the channel does not support image transmission. Returns -1 only on error/hangup. Image names should not include extensions.

#### Syntax

SEND IMAGE IMAGE

## Arguments

• IMAGE

## See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SEND TEXT

#### **SEND TEXT**

#### Synopsis

Sends text to channels supporting it.

## Description

Sends the given text on a channel. Most channels do not support the transmission of text. Returns 0 if text is sent, or if the channel does not support text transmission. Returns -1 only on error/hangup.

## **Syntax**

SEND TEXT TEXT\_TO\_SEND

#### Arguments

TEXT\_TO\_SEND - Text consisting of greater than one word should be placed in quotes since the command only accepts a single
argument.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **AGICommand SET AUTOHANGUP**

#### **SET AUTOHANGUP**

#### Synopsis

Autohangup channel in some time.

#### Description

Cause the channel to automatically hangup at *time* seconds in the future. Of course it can be hungup before then as well. Setting to 0 will cause the autohangup feature to be disabled on this channel.

#### **Syntax**

SET AUTOHANGUP TIME

#### Arguments

• TIME

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SET CALLERID

#### **SET CALLERID**

## Synopsis

Sets callerid for the current channel.

## Description

Changes the callerid of the current channel.

## Syntax

SET CALLERID NUMBER

#### Arguments

NUMBER

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SET CONTEXT

## **SET CONTEXT**

## **Synopsis**

Sets channel context.

## Description

Sets the context for continuation upon exiting the application.

## **Syntax**

SET CONTEXT DESIRED\_CONTEXT

#### Arguments

• DESIRED\_CONTEXT

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **AGICommand\_SET EXTENSION**

## **SET EXTENSION**

## Synopsis

Changes channel extension.

#### Description

Changes the extension for continuation upon exiting the application.

#### Syntax

SET EXTENSION NEW\_EXTENSION

#### Arguments

• NEW\_EXTENSION

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_SET MUSIC

## **SET MUSIC**

## **Synopsis**

Enable/Disable Music on hold generator

## Description

Enables/Disables the music on hold generator. If *class* is not specified, then the default music on hold class will be used.

Always returns 0.

## Syntax

SET MUSIC UNNAMED\_PARAMETER CLASS

#### Arguments

- UNNAMED\_PARAMETER
  - Unnamed Option
  - Unnamed Option
- CLASS

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## AGICommand\_SET PRIORITY

## **SET PRIORITY**

## Synopsis

Set channel dialplan priority.

## Description

Changes the priority for continuation upon exiting the application. The priority must be a valid priority or label.

#### Syntax

SET PRIORITY PRIORITY

#### Arguments

• PRIORITY

#### See Also

# AGICommand\_SPEECH CREATE

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_SPEECH LOAD GRAMMAR

# **SPEECH LOAD GRAMMAR**

Synopsis

Loads a grammar.

Description

Loads the specified grammar as the specified name.

### **Syntax**

SPEECH LOAD GRAMMAR GRAMMAR\_NAME PATH\_TO\_GRAMMAR

# Arguments

- GRAMMAR\_NAME
- PATH\_TO\_GRAMMAR

See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_SPEECH RECOGNIZE

#### **SPEECH RECOGNIZE**

Synopsis

Recognizes speech.

Description

Plays back given *prompt* while listening for speech and dtmf.

# Syntax

SPEECH RECOGNIZE PROMPT TIMEOUT [OFFSET]

#### Arguments

- PROMPT
- TIMEOUT
- OFFSET

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_SPEECH SET

#### **SPEECH SET**

Synopsis

Sets a speech engine setting.

# Description

Set an engine-specific setting.

# Syntax

SPEECH SET NAME VALUE

### Arguments

- SPEECH SET
- VALUE

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_SPEECH UNLOAD GRAMMAR

#### SPEECH UNLOAD GRAMMAR

# Synopsis

Unloads a grammar.

#### Description

Unloads the specified grammar.

#### Syntax

SPEECH UNLOAD GRAMMAR GRAMMAR\_NAME

#### Arguments

• GRAMMAR\_NAME

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **AGICommand STREAM FILE**

#### STREAM FILE

#### Synopsis

Sends audio file on channel.

#### Description

Send the given file, allowing playback to be interrupted by the given digits, if any. Returns 0 if playback completes without a digit being pressed, or the ASCII numerical value of the digit if one was pressed, or -1 on error or if the channel was disconnected.

#### Syntax

STREAM FILE FILENAME ESCAPE\_DIGITS [SAMPLE\_OFFSET]

#### Arguments

- FILENAME File name to play. The file extension must not be included in the filename.
- ESCAPE\_DIGITS Use double quotes for the digits if you wish none to be permitted.
- SAMPLE\_OFFSET If sample offset is provided then the audio will seek to sample offset before play starts.

#### See Also

# AGICommand\_CONTROL STREAM FILE

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_TDD MODE

#### **TDD MODE**

### Synopsis

Toggles TDD mode (for the deaf).

#### Description

Enable/Disable TDD transmission/reception on a channel. Returns 1 if successful, or 0 if channel is not TDD-capable.

# Syntax

```
TDD MODE BOOLEAN
```

#### Arguments

• BOOLEAN
• on

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_VERBOSE

#### **VERBOSE**

# **Synopsis**

Logs a message to the asterisk verbose log.

# Description

Sends  $\it message$  to the console via verbose message system.  $\it level$  is the verbose level (1-4). Always returns 1

### Syntax

```
VERBOSE MESSAGE LEVEL
```

#### Arguments

- MESSAGE
- LEVEL

# See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# AGICommand\_WAIT FOR DIGIT

#### **WAIT FOR DIGIT**

# Synopsis

Waits for a digit to be pressed.

### Description

Waits up to *timeout* milliseconds for channel to receive a DTMF digit. Returns -1 on channel failure, 0 if no digit is received in the timeout, or the numerical value of the ascii of the digit if one is received. Use -1 for the *timeout* value if you desire the call to block indefinitely.

#### Syntax

WAIT FOR DIGIT TIMEOUT

#### Arguments

• TIMEOUT

# ManagerAction\_AbsoluteTimeout

# **AbsoluteTimeout**

Synopsis

Set absolute timeout.

### Description

Hangup a channel after a certain time. Acknowledges set time with Timeout Set message.

#### Syntax

Action: AbsoluteTimeout
[ActionID:] <value>
Channel: <value>
Timeout: <value>

# Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel name to hangup.
- Timeout Maximum duration of the call (sec).

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_AgentLogoff

# AgentLogoff

# Synopsis

Sets an agent as no longer logged in.

#### Description

Sets an agent as no longer logged in.

#### Syntax

Action: AgentLogoff
[ActionID:] <value>

Agent: <value>
[Soft:] <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Agent Agent ID of the agent to log off.
- Soft Set to true to not hangup existing calls.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_Agents

# **Agents**

# Synopsis

Lists agents and their status.

#### Description

Will list info about all possible agents.

#### Syntax

```
Action: Agents
[ActionID:] <value>
```

### Arguments

• ActionID - ActionID for this transaction. Will be returned.

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_AGI

#### AGI

# **Synopsis**

Add an AGI command to execute by Async AGI.

# Description

Add an AGI command to the execute queue of the channel in Async AGI.

### **Syntax**

Action: AGI

[ActionID:] <value>
Channel: <value>
Command: <value>
[CommandID:] <value>

# Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel that is currently in Async AGI.
- Command Application to execute.
- CommandID This will be sent back in CommandID header of AsyncAGI exec event notification.

# ManagerAction\_AOCMessage

# **AOCMessage**

# Synopsis

Generate an Advice of Charge message on a channel.

# Description

Generates an AOC-D or AOC-E message on a channel.

# Syntax

Action: AOCMessage [ActionID:] <value> Channel: <value> [ChannelPrefix:] <value> MsgType: <value> ChargeType: <value> [UnitAmount(0):] <value> [UnitType(0):] <value> [CurrencyName:] <value> [CurrencyAmount:] <value> [CurrencyMultiplier:] <value> [TotalType:] <value> [AOCBillingId:] <value> [ChargingAssociationId:] <value> [ChargingAssociationNumber:] <value> [ChargingAssociationPlan:] <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel name to generate the AOC message on.
- ChannelPrefix Partial channel prefix. By using this option one can match the beginning part of a channel name without having to put the entire name in. For example if a channel name is SIP/snom-00000001 and this value is set to SIP/snom, then that channel matches and the message will be sent. Note however that only the first matched channel has the message sent on it.
- MsgType Defines what type of AOC message to create, AOC-D or AOC-E
  - D • E
- ChargeType Defines what kind of charge this message represents.
  - NA
  - FREE
  - Currency
  - Unit
- UnitAmount(0) This represents the amount of units charged. The ETSI AOC standard specifies that this value along with the optional UnitType value are entries in a list. To accommodate this these values take an index value starting at 0 which can be used to generate this list of unit entries. For Example, If two unit entires were required this could be achieved by setting the parametr UnitAmount(0)=1234 and UnitAmount(1)=5678. Note that UnitAmount at index 0 is required when ChargeType=Unit, all other entries in the list are optional.
- UnitType(0) Defines the type of unit. ETSI AOC standard specifies this as an integer value between 1 and 16, but this value is left open to accept any positive integer. Like the UnitAmount parameter, this value represents a list entry and has an index parameter that
- CurrencyName Specifies the currency's name. Note that this value is truncated after 10 characters.
- CurrencyAmount Specifies the charge unit amount as a positive integer. This value is required when ChargeType==Currency.
- CurrencyMultiplier Specifies the currency multiplier. This value is required when ChargeType==Currency.
  - OneThousandth
  - OneHundredth
  - OneTenth
  - One
  - Ten
  - Hundred
  - Thousand
- TotalType Defines what kind of AOC-D total is represented.
  - Total
  - SubTotal
- AOCBillingId Represents a billing ID associated with an AOC-D or AOC-E message. Note that only the first 3 items of the enum are valid AOC-D billing IDs
  - Normal
  - ReverseCharge
  - CreditCard
  - CallFwdUnconditional
  - CallFwdBusy
  - CallFwdNoReply
  - CallDeflection

- CallTransfer
- ChargingAssociationId Charging association identifier. This is optional for AOC-E and can be set to any value between -32768 and 32767
- ChargingAssociationNumber Represents the charging association party number. This value is optional for AOC-E.
- ChargingAssociationPlan Integer representing the charging plan associated with the ChargingAssociationNumber. The value is bits 7 through 1 of the Q.931 octet containing the type-of-number and numbering-plan-identification fields.

# ManagerAction\_Atxfer

#### **Atxfer**

Synopsis

Attended transfer.

Description

Attended transfer.

#### Syntax

Action: Atxfer

[ActionID:] <value>
Channel: <value>
Exten: <value>
Context: <value>
Priority: <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Transferer's channel.
- Exten Extension to transfer to.
- Context Context to transfer to.
- Priority Priority to transfer to.

# ManagerAction\_ChangeMonitor

# ChangeMonitor

# Synopsis

Change monitoring filename of a channel.

#### Description

This action may be used to change the file started by a previous 'Monitor' action.

# Syntax

```
Action: ChangeMonitor
[ActionID:] <value>
Channel: <value>
File: <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Used to specify the channel to record.
- File Is the new name of the file created in the monitor spool directory.

# ManagerAction\_CoreSettings

# **CoreSettings**

# Synopsis

Show PBX core settings (version etc).

# Description

Query for Core PBX settings.

#### Syntax

```
Action: CoreSettings
[ActionID:] <value>
```

### Arguments

• ActionID - ActionID for this transaction. Will be returned.

# See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_CoreShowChannels

# CoreShowChannels

# **Synopsis**

List currently active channels.

#### Description

List currently defined channels and some information about them.

# Syntax

```
Action: CoreShowChannels
[ActionID:] <value>
```

#### Arguments

• ActionID - ActionID for this transaction. Will be returned.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_CoreStatus

# **CoreStatus**

#### Synopsis

Show PBX core status variables.

#### Description

Query for Core PBX status.

# **Syntax**

```
Action: CoreStatus
[ActionID:] <value>
```

# Arguments

• ActionID - ActionID for this transaction. Will be returned.

# ManagerAction\_GetConfig

# **GetConfig**

#### Synopsis

Retrieve configuration.

### Description

This action will dump the contents of a configuration file by category and contents or optionally by specified category only.

### Syntax

```
Action: GetConfig
[ActionID:] <value>
Filename: <value>
[Category:] <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Filename Configuration filename (e.g. foo.conf).
- Category Category in configuration file.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_GetConfigJSON

# **GetConfigJSON**

# **Synopsis**

Retrieve configuration (JSON format).

# Description

This action will dump the contents of a configuration file by category and contents in JSON format. This only makes sense to be used using rawman over the HTTP interface.

#### Syntax

```
Action: GetConfigJSON
[ActionID:] <value>
Filename: <value>
```

# Arguments

- ActionID ActionID for this transaction. Will be returned.
- Filename Configuration filename (e.g. foo.conf).

# ManagerAction\_ListCategories

# ListCategories

# Synopsis

List categories in configuration file.

#### Description

This action will dump the categories in a given file.

# Syntax

```
Action: ListCategories
[ActionID:] <value>
Filename: <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Filename Configuration filename (e.g. foo.conf).

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_ListCommands

### ListCommands

# Synopsis

List available manager commands.

#### Description

Returns the action name and synopsis for every action that is available to the user.

### Syntax

```
Action: ListCommands
[ActionID:] <value>
```

### Arguments

• ActionID - ActionID for this transaction. Will be returned.

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_LocalOptimizeAway

# LocalOptimizeAway

#### Synopsis

Optimize away a local channel when possible.

# Description

A local channel created with "/n" will not automatically optimize away. Calling this command on the local channel will clear that flag and allow it to optimize away if it's bridged or when it becomes bridged.

# **Syntax**

Action: LocalOptimizeAway

[ActionID:] <value>
Channel: <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel The channel name to optimize away.

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_Login

Login

**Synopsis** 

Login Manager.

Description

Login Manager.

Syntax

Action: Login

[ActionID:] <value>
Username: <value>
[Secret:] <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Username Username to login with as specified in manager.conf.
- Secret Secret to login with as specified in manager.conf.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r324178.

# ManagerAction\_Logoff

# Logoff

# Synopsis

Logoff Manager.

#### Description

Logoff the current manager session.

#### Syntax

```
Action: Logoff
[ActionID:] <value>
```

### Arguments

• ActionID - ActionID for this transaction. Will be returned.

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_MailboxCount

#### MailboxCount

# **Synopsis**

Check Mailbox Message Count.

# Description

Checks a voicemail account for new messages.

Returns number of urgent, new and old messages.

Message: Mailbox Message Count

Mailbox: mailboxid

UrgentMessages: count

NewMessages: count

OldMessages: count

#### Syntax

Action: MailboxCount
[ActionID:] <value>
Mailbox: <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Mailbox Full mailbox ID mailbox @ vm-context.

# See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_MailboxStatus

# **MailboxStatus**

# Synopsis

Check mailbox.

# Description

Checks a voicemail account for status.

Returns number of messages.

Message: Mailbox Status.

Mailbox: mailboxid.

Waiting: count.

### **Syntax**

```
Action: MailboxStatus
[ActionID:] <value>
Mailbox: <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Mailbox Full mailbox ID mailbox @ vm-context.

# ManagerAction\_MeetmeMute

## **MeetmeMute**

Synopsis

Mute a Meetme user.

## Description

### Syntax

Action: MeetmeMute
[ActionID:] <value>
Meetme: <value>
Usernum: <value>

### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Meetme
- Usernum

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_MeetmeUnmute

## MeetmeUnmute

Synopsis

Unmute a Meetme user.

## Description

## Syntax

Action: MeetmeUnmute
[ActionID:] <value>
Meetme: <value>
Usernum: <value>

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Meetme
- Usernum

#### See Also

## Import Version

# ManagerAction\_ModuleCheck

## **ModuleCheck**

## **Synopsis**

Check if module is loaded.

### Description

Checks if Asterisk module is loaded. Will return Success/Failure. For success returns, the module revision number is included.

### Syntax

Action: ModuleCheck Module: <value>

### Arguments

• Module - Asterisk module name (not including extension).

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_ModuleLoad

### **ModuleLoad**

## Synopsis

Module management.

#### Description

Loads, unloads or reloads an Asterisk module in a running system.

### Syntax

```
Action: ModuleLoad
[ActionID:] <value>
[Module:] <value>
LoadType: <value>
```

## Arguments

- ActionID ActionID for this transaction. Will be returned.
- Module Asterisk module name (including.so extension) or subsystem identifier:

  - cdr enum
  - dnsmgr
  - extconfig managerrtp

  - http
- LoadType The operation to be done on module. If no module is specified for a reload loadtype, all modules are reloaded.

  - load unload
  - reload

# ManagerAction\_Originate

## **Originate**

Synopsis

Originate a call.

## Description

Generates an outgoing call to a Extension / Context / Priority or Application / Data

## **Syntax**

```
Action: Originate
[ActionID:] <value>
Channel: <value>
[Exten:] <value>
[Context:] <value>
[Priority:] <value>
[Application:] <value>
[Data:] <value>
[Timeout:] <value>
[CallerID:] <value>
[Variable:] <value>
[Account:] <value>
[Account:] <value>
[Async:] <value>
[Codecs:] <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel name to call.
- Exten Extension to use (requires Context and Priority)
- Context Context to use (requires Exten and Priority)
- Priority Priority to use (requires Exten and Context)
- Application Application to execute.
- Data Data to use (requires Application ).
- Timeout How long to wait for call to be answered (in ms.).
- CallerID Caller ID to be set on the outgoing channel.
- Variable Channel variable to set, multiple Variable: headers are allowed.
- Account Account code.
- Async Set to true for fast origination.
- Codecs Comma-separated list of codecs to use for this call.

# ManagerAction\_Park

### **Park**

Synopsis

Park a channel.

Description

Park a channel.

**Syntax** 

Action: Park

[ActionID:] <value>
Channel: <value>
Channel2: <value>
[Timeout:] <value>
[Parkinglot:] <value>

### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel name to park.
- Channel 2 Channel to return to if timeout.
- Timeout Number of milliseconds to wait before callback.
- Parkinglot Specify in which parking lot to park the channel.

# ManagerAction\_Redirect

### Redirect

#### Synopsis

Redirect (transfer) a call.

### Description

Redirect (transfer) a call.

## **Syntax**

```
Action: Redirect
[ActionID:] <value>
Channel: <value>
[ExtraChannel:] <value>
Exten: <value>
[ExtraExten:] <value>
Context: <value>
[ExtraContext:] <value>
Priority: <value>
[ExtraPriority:] <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- Channel Channel to redirect.
- ExtraChannel Second call leg to transfer (optional).
- Exten Extension to transfer to.
- ExtraExten Extension to transfer extrachannel to (optional).
- Context Context to transfer to.
- ExtraContext Context to transfer extrachannel to (optional).
- Priority Priority to transfer to.
- ExtraPriority Priority to transfer extrachannel to (optional).

# ManagerAction\_UpdateConfig

# **UpdateConfig**

## **Synopsis**

Update basic configuration.

## Description

This action will modify, create, or delete configuration elements in Asterisk configuration files.

#### Syntax

```
Action: UpdateConfig
[ActionID:] <value>
SrcFilename: <value>
DstFilename: <value>
[Reload:] <value>
[Action-XXXXXX:] <value>
[Cat-XXXXXX:] <value>
[Var-XXXXXX:] <value>
[Value-XXXXXX:] <value>
[Value-XXXXXX:] <value>
[Line-XXXXXX:] <value>
```

#### Arguments

- ActionID ActionID for this transaction. Will be returned.
- SrcFilename Configuration filename to read (e.g. foo.conf).
- DstFilename Configuration filename to write (e.g. foo.conf)
- Reload Whether or not a reload should take place (or name of specific module).
- Action-XXXXXX Action to take. X's represent 6 digit number beginning with 000000.
  - NewCat
  - RenameCat
  - DelCat

- EmptyCat
- Update
- Delete
- Append
- Insert
- Cat-XXXXXX Category to operate on. X's represent 6 digit number beginning with 000000.
- Var-XXXXXX Variable to work on. X's represent 6 digit number beginning with 000000.
- Value-XXXXXX Value to work on. X's represent 6 digit number beginning with 000000.
- Match-XXXXXX Extra match required to match line. X's represent 6 digit number beginning with 000000.
- Line-XXXXXX Line in category to operate on (used with delete and insert actions). X's represent 6 digit number beginning with 000000.

# ManagerAction\_UserEvent

### **UserEvent**

### Synopsis

Send an arbitrary event.

## Description

Send an event to manager sessions.

## **Syntax**

```
Action: UserEvent
[ActionID:] <value>
UserEvent: <value>
[Header1:] <value>
[HeaderN:] <value>
```

### Arguments

- ActionID ActionID for this transaction. Will be returned.
- UserEvent Event string to send.
- Header1 Content1.
- HeaderN ContentN.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_VoicemailUsersList

## VoicemailUsersList

## Synopsis

List All Voicemail User Information.

## Description

#### Syntax

```
Action: VoicemailUsersList
[ActionID:] <value>
```

#### Arguments

• ActionID - ActionID for this transaction. Will be returned.

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# ManagerAction\_WaitEvent

## WaitEvent

## Synopsis

Wait for an event to occur.

# Description

This action will ellicit a Success response. Whenever a manager event is queued. Once WaitEvent has been called on an HTTP manager session, events will be generated and queued.

### **Syntax**

```
Action: WaitEvent
[ActionID:] <value>
Timeout: <value>
```

## Arguments

- ActionID ActionID for this transaction. Will be returned.
- Timeout Maximum time (in seconds) to wait for events, -1 means forever.

#### See Also

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Dialplan Applications**

# Application\_AddQueueMember

## AddQueueMember()

### Synopsis

Dynamically adds queue members.

### Description

Dynamically adds interface to an existing queue. If the interface is already in the queue it will return an error.

This application sets the following channel variable upon completion:

- AQMSTATUS The status of the attempt to add a queue member as a text string.
  - ADDED
  - MEMBERALREADY
  - NOSUCHQUEUE

### Syntax

AddQueueMember(queuename[,interface[,penalty[,options[,membername[,sta

#### Arguments

- queuename
- interface
- penaltyoptions
- membername
- stateinterface

# Application\_ADSIProg

# ADSIProg()

Synopsis

Load Asterisk ADSI Scripts into phone

### Description

This application programs an ADSI Phone with the given script

### Syntax

```
ADSIProg([script])
```

#### Arguments

• script - adsi script to use. If not given uses the default script asterisk.adsi

#### See Also

# Application\_GetCPEID

adsi.conf

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_AELSub

# AELSub()

Synopsis

Launch subroutine built with AEL

## Description

Execute the named subroutine, defined in AEL, from another dialplan language, such as extensions.conf, Realtime extensions, or Lua.

The purpose of this application is to provide a sane entry point into AEL subroutines, the implementation of which may change from time to time.

### Syntax

```
AELSub(routine[,args])
```

### Arguments

- routine Named subroutine to execute.
- args

### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_AgentLogin

## AgentLogin()

#### Synopsis

Call agent login.

### Description

Asks the agent to login to the system. Always returns -1. While logged in, the agent can receive calls and will hear a beep when a new call comes in. The agent can dump the call by pressing the star key.

### Syntax

```
AgentLogin([AgentNo[,options]])
```

## Arguments

- AgentNo
- options
  - s silent login do not announce the login ok segment after agent logged on/off

## See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_AgentMonitorOutgoing

# AgentMonitorOutgoing()

#### Synopsis

Record agent's outgoing call.

# Description

Tries to figure out the id of the agent who is placing outgoing call based on comparison of the callerid of the current interface and the global variable placed by the AgentCallbackLogin application. That's why it should be used only with the AgentCallbackLogin app. Uses the monitoring functions in chan\_agent instead of Monitor application. That has to be configured in the agents.conf file.

Normally the app returns 0 unless the options are passed.

#### Syntax

AgentMonitorOutgoing([options])

#### Arguments

- options
  - d make the app return -1 if there is an error condition.
  - c change the CDR so that the source of the call is Agent/agent\_id
  - n don't generate the warnings when there is no callerid or the agentid is not known. It's handy if you want to have one context for agent and non-agent calls.

agents.conf

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_AGI

### AGI()

#### Synopsis

Executes an AGI compliant application.

#### Description

Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on **stdin** and **stdout**. As of 1.6.0, this channel will not stop dialplan execution on hangup inside of this application. Dialplan execution will continue normally, even upon hangup until the AGI application signals a desire to stop (either by exiting or, in the case of a net script, by closing the connection). A locally executed AGI script will receive SIGHUP on hangup from the channel except when using

DeadAGI. A fast AGI server will correspondingly receive a HANGUP inline with the command dialog. Both of theses signals may be disabled by setting the Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on None - AGISIGHUP channel variable to no before executing the AGI application.

Use the CLI command agi show commands to list available agi commands.

This application sets the following channel variable upon completion:

- AGISTATUS The status of the attempt to the run the AGI script text string, one of:
  - SUCCESS
  - FAILURE
  - NOTFOUND
  - HANGUP

#### Syntax

```
AGI(command[,arg1[,arg2]])
```

#### Arguments

- command
- args
  - arg1
  - arg2

#### See Also

Application\_EAGI
Application DeadAGI

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_AlarmReceiver

## AlarmReceiver()

## Synopsis

Provide support for receiving alarm reports from a burglar or fire alarm panel.

## Description

This application should be called whenever there is an alarm panel calling in to dump its events. The application will handshake with the alarm panel, and receive events, validate them, handshake them, and store them until the panel hangs up. Once the panel hangs up, the application will run the system command specified by the eventcmd setting in

alarmreceiver.conf and pipe the events to the standard input of the application. The configuration file also contains settings for DTMF timing, and for the loudness of the acknowledgement tones.

Only 1 signalling format is supported at this time: Ademco Contact ID.Only 1 signalling format is supported at this time: Ademco Contact ID.

## **Syntax**

AlarmReceiver()

#### Arguments

#### See Also

alarmreceiver.conf

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_AMD

# AMD()

#### Synopsis

Attempt to detect answering machines.

### Description

This application attempts to detect answering machines at the beginning of outbound calls. Simply call this application after the call has been answered (outbound only, of course).

When loaded, AMD reads amd conf and uses the parameters specified as default values. Those default values get overwritten when the calling AMD with parameters.

This application sets the following channel variables:

- AMDSTATUS This is the status of the answering machine detection
  - MACHINE
  - HUMAN
  - NOTSURE
  - HANGUP
- AMDCAUSE Indicates the cause that led to the conclusion
  - TOOLONG Total Time.
  - INITIALSILENCE Silence Duration Initial Silence.
  - HUMAN Silence Duration afterGreetingSilence.
  - LONGGREETING Voice Duration Greeting.
  - MAXWORDLENGTH Word Count maximum number of words.

#### Syntax

AMD([initialSilence[,greeting[,afterGreetingSilence[,totalAnalysis Time[,miniumWordLength[,betweenWordSilence[,maximumNumberOfWords[,silence[]]])

#### Arguments

- initialSilence Is maximum initial silence duration before greeting. If this is exceeded set as MACHINE
- greeting is the maximum length of a greeting. If this is exceeded set as MACHINE
- afterGreetingSilence Is the silence after detecting a greeting. If this is exceeded set as HUMAN
- totalAnalysis Time Is the maximum time allowed for the algorithm to decide HUMAN or MACHINE
- miniumWordLength Is the minimum duration of Voice considered to be a word
- betweenWordSilence Is the minimum duration of silence after a word to consider the audio that follows to be a new word
- maximumNumberOfWords Is the maximum number of words in a greeting If this is exceeded set as MACHINE
- silenceThreshold How long do we consider silence
- maximumWordLength Is the maximum duration of a word to accept. If exceeded set as MACHINE

#### See Also

# Application\_Answer

### Answer()

#### Synopsis

Answer a channel if ringing.

## Description

If the call has not been answered, this application will answer it. Otherwise, it has no effect on the call.

## **Syntax**

Answer([delay[,nocdr]])

#### Arguments

- delay Asterisk will wait this number of milliseconds before returning to the dialplan after answering the call.
- nocdr Asterisk will send an answer signal to the calling phone, but will not set the disposition or answer time in the CDR for this call.

#### See Also

# Application\_Hangup

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Application\_Authenticate**

Authenticate()

Synopsis

Authenticate a user

## Description

This application asks the caller to enter a given password in order to continue dialplan execution.

If the password begins with the / character, it is interpreted as a file which contains a list of valid passwords, listed 1 password per line in the file.

When using a database key, the value associated with the key can be anything.

Users have three attempts to authenticate before the channel is hung up.

## **Syntax**

Authenticate(password[,options[,maxdigits[,prompt]]])

#### Arguments

- password Password the user should know
- options
  - a Set the channels' account code to the password that is entered
  - d Interpret the given path as database key, not a literal file
  - m Interpret the given path as a file which contains a list of account codes and password hashes delimited with:, listed one per line in the file. When one of the passwords is matched, the channel will have its account code set to the corresponding account code in the file.
  - $\bullet~$   $\tt r$  Remove the database key upon successful entry (valid with <code>d</code> only)
- maxdigits maximum acceptable number of digits. Stops reading after maxdigits have been entered (without requiring the user to press the # key). Defaults to 0 no limit wait for the user press the # key.
- prompt Override the agent-pass prompt file.

#### See Also

Application\_VMAuthenticate Application\_DISA

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_BackGround

#### BackGround()

### Synopsis

Play an audio file while waiting for digits of an extension to go to.

## Description

This application will play the given list of files (do not put extension) while waiting for an extension to be dialed by the calling channel. To continue waiting for digits after this application has finished playing files, the WaitExten application should be used.

If one of the requested sound files does not exist, call processing will be terminated.

This application sets the following channel variable upon completion:

- BACKGROUNDSTATUS The status of the background attempt as a text string.
  - SUCCESS
  - FAILED

## Syntax

 ${\tt BackGround(filename1[\&filename2[\&...]][,options[,langoverride[,context]]]} \label{eq:backGround} \\$ 

#### Arguments

- filenames
  - filename1
  - filename2
- options
  - s Causes the playback of the message to be skipped if the channel is not in the up state (i.e. it hasn't been answered yet). If this happens, the application will return immediately.
  - n Don't answer the channel before playing the files.
  - m Only break if a digit hit matches a one digit extension in the destination context.
- langoverride Explicitly specifies which language to attempt to use for the requested sound files.
- context This is the dialplan context that this application will use when exiting to a dialed extension.

#### See Also

Application\_ControlPlayback

Application\_BackgroundDetect
Function\_TIMEOUT

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_BackgroundDetect

# **BackgroundDetect()**

### Synopsis

Background a file with talk detect.

#### Description

Plays back *filename*, waiting for interruption from a given digit (the digit must start the beginning of a valid extension, or it will be ignored). During the playback of the file, audio is monitored in the receive direction, and if a period of non-silence which is greater than *min* ms yet less than *max* ms is followed by silence for at least *sil* ms, which occurs during the first *analysistime* ms, then the audio playback is aborted and processing jumps to the *talk* extension, if available.

#### Syntax

```
BackgroundDetect(filename[,sil[,min[,max[,analysistime]]]])
```

#### Arguments

- filename
- sil If not specified, defaults to 1000.
- min If not specified, defaults to 100.
- max If not specified, defaults to infinity.
- analysistime If not specified, defaults to infinity.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Bridge

## Bridge()

Synopsis

Bridge two channels.

#### Description

Allows the ability to bridge two channels via the dialplan.

This application sets the following channel variable upon completion:

- BRIDGERESULT The result of the bridge attempt as a text string.
  - SUCCESS
  - FAILURE
  - LOOP
  - NONEXISTENT
  - INCOMPATIBLE

#### Syntax

```
Bridge(channel[,options])
```

#### Arguments

- channel The current channel is bridged to the specified channel.
- options
  - p Play a courtesy tone to channel.

- h Allow the called party to hang up by sending the \*DTMF digit.
- H Allow the calling party to hang up by pressing the \*DTMF digit.
- k Allow the called party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
- K Allow the calling party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
- L(x:y:z) Limit the call to x ms. Play a warning when y ms are left. Repeat the warning every z ms. The following special variables can be used with this option: Play sounds to the caller. yes|no (default yes) Play sounds to the callee. yes|no File to play when time is up. File to play when call begins. File to play as warning if y is defined. The default is to say the time remaining.
- s Hang up the call after x seconds **after** the called party has answered the call.
- t Allow the called party to transfer the calling party by sending the DTMF sequence defined in features.conf.
- T Allow the calling party to transfer the called party by sending the DTMF sequence defined in features.conf.
- w Allow the called party to enable recording of the call by sending the DTMF sequence defined for one-touch recording in features.conf.
- W Allow the calling party to enable recording of the call by sending the DTMF sequence defined for one-touch recording in features.conf.
- x Cause the called party to be hung up after the bridge, instead of being restarted in the dialplan.

## **Application Busy**

## Busy()

## Synopsis

Indicate the Busy condition.

#### Description

This application will indicate the busy condition to the calling channel.

#### Syntax

Busy([timeout])

#### Arguments

timeout - If specified, the calling channel will be hung up after the specified number of seconds. Otherwise, this application will wait until
the calling channel hangs up.

# Application\_CallCompletionCancel

# CallCompletionCancel()

Synopsis

Cancel call completion service

Description

Cancel a Call Completion Request.

This application sets the following channel variables:

- CC\_CANCEL\_RESULT This is the returned status of the cancel.
  - SUCCESS
  - FAIL
- CC\_CANCEL\_REASON This is the reason the cancel failed.
  - NO\_CORE\_INSTANCE
  - NOT\_GENERIC
  - UNSPECIFIED

#### Syntax

CallCompletionCancel()

Arguments

See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

# Application\_CallCompletionRequest

## CallCompletionRequest()

**Synopsis** 

Request call completion service for previous call

# Description

Request call completion service for a previously failed call attempt.

This application sets the following channel variables:

- CC\_REQUEST\_RESULT This is the returned status of the request.
  - SUCCESS
  - FAIL
- CC\_REQUEST\_REASON This is the reason the request failed.
  - NO\_CORE\_INSTANCE
  - NOT\_GENERIC
  - TOO\_MANY\_REQUESTS
  - UNSPECIFIED

#### Syntax

CallCompletionRequest()

Arguments

See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

# Application\_CELGenUserEvent

# CELGenUserEvent()

Synopsis

Generates a CEL User Defined Event.

## Description

A CEL event will be immediately generated by this channel, with the supplied name for a type.

## Syntax

CELGenUserEvent(event-name[,extra])

## Arguments

- event-name
  - event-name
  - extra Extra text to be included with the event.

#### See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ChangeMonitor

ChangeMonitor()

Synopsis

Change monitoring filename of a channel.

Description

Changes monitoring filename of a channel. Has no effect if the channel is not monitored.

## **Syntax**

ChangeMonitor(filename\_base)

#### Arguments

• filename\_base - The new filename base to use for monitoring this channel.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ChanlsAvail

## ChanIsAvail()

Synopsis

Check channel availability

#### Description

This application will check to see if any of the specified channels are available.

This application sets the following channel variables:

- AVAILCHAN The name of the available channel, if one exists
- AVAILORIGCHAN The canonical channel name that was used to create the channel
- AVAILSTATUS The device state for the device
- AVAILCAUSECODE The cause code returned when requesting the channel

#### Syntax

ChanIsAvail([Technology2/Resource2[&...]][,options])

#### Arguments

- Technology/Resource Specification of the device(s) to check. These must be in the format of Technology/Resource, where
   Technology represents a particular channel driver, and Resource represents a resource available to that particular channel driver.
  - Technology2/Resource2 Optional extra devices to check If you need more then one enter them as Technology2/Resource2&Technology3/Resourse3&.....
- options
  - a Check for all available channels, not only the first one
  - s Consider the channel unavailable if the channel is in use at all
  - $\bullet\ \ t$  Simply checks if specified channels exist in the channel list

# See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ChannelRedirect

## ChannelRedirect()

#### Synopsis

Redirects given channel to a dialplan target

## Description

Sends the specified channel to the specified extension priority

This application sets the following channel variables upon completion

- CHANNELREDIRECT\_STATUS -
  - NOCHANNEL
  - SUCCESS Are set to the result of the redirection

#### Syntax

ChannelRedirect(channel[,context[,extension,priority]])

#### Arguments

- channel
- context
- extension
- priority

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ChanSpy

# ChanSpy()

#### Synopsis

Listen to a channel, and optionally whisper into it.

## Description

This application is used to listen to the audio from an Asterisk channel. This includes the audio coming in and out of the channel being spied on. If the chanprefix parameter is specified, only channels beginning with this string will be spied upon.

While spying, the following actions may be performed:

- Dialing # cycles the volume level.
- Dialing \* will stop spying and look for another channel to spy on.
- Dialing a series of digits followed by # builds a channel name to append to 'chanprefix'. For example, executing ChanSpy(Agent) and
  then dialing the digits '1234#' while spying will begin spying on the channel 'Agent/1234'. Note that this feature will be overridden if the 'd'
  option is used

The The X option supersedes the three features above in that if a valid single digit extension exists in the correct context ChanSpy will exit to it. This also disables choosing a channel based on chanprefix and a digit sequence.

#### Syntax

ChanSpy([chanprefix[,options]])

#### Arguments

- $^{ullet}$  chanprefix
- options
  - b Only spy on channels involved in a bridged call.
    - B Instead of whispering on a single channel barge in on both channels involved in the call.
    - 0
- digit Specify a DTMF digit that can be used to spy on the next available channel.
- d Override the typical numeric DTMF functionality and instead use DTMF to switch between spy modes.
  - 4 spy mode
  - 5 whisper mode
  - 6 barge mode
- e Enable enforced mode, so the spying channel can only monitor extensions whose name is in the ext: delimited list.
  - ext
- E Exit when the spied-on channel hangs up.
- g both both grp and SPYGROUP can contain either a single group or a colon-delimited list of groups, such as sales:support:accounting.
  - grp Only spy on channels in which one or more of the groups listed in grp matches one or more groups from the SPYGROUP variable set on the channel to be spied upon.
- n Say the name of the person being spied on if that person has recorded his/her name. If a context is specified, then that voicemail context will be searched when retrieving the name, otherwise the default context be used when searching for the name (i.e. if SIP/1000 is the channel being spied on and no mailbox is specified, then 1000 will be used when searching for the name).
  - mailbox
  - context
- o Only listen to audio coming from this channel.
- q Don't play a beep when beginning to spy on a channel, or speak the selected channel name.
- r Record the session to the monitor spool directory. An optional base for the filename may be specified. The default is chanspy.
  - basename
- s Skip the playback of the channel type (i.e. SIP, IAX, etc) when speaking the selected channel name.
- S Stop when no more channels are left to spy on.
- v Adjust the initial volume in the range from -4 to 4. A negative value refers to a quieter setting.
  - value
- w Enable whisper mode, so the spying channel can talk to the spied-on channel.
- W Enable private whisper mode, so the spying channel can talk to the spied-on channel but cannot listen to that channel.
- x
- digit Specify a DTMF digit that can be used to exit the application.
- X Allow the user to exit ChanSpy to a valid single digit numeric extension in the current context or the context specified by the SPY\_EXIT\_CONTEXT channel variable. The name of the last channel that was spied on will be stored in the SPY\_CHANNEL variable.
- 4 spy mode
- 5 whisper mode
- 6 barge mode

# Application\_ClearHash

# ClearHash()

Synopsis

Clear the keys from a specified hashname.

### Description

Clears all keys out of the specified hashname.

## Syntax

ClearHash(hashname)

#### Arguments

• hashname

#### See Also

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ConfBridge

# ConfBridge()

Synopsis

Conference bridge application.

# Description

Enters the user into a specified conference bridge. The user can exit the conference by hangup only.

The join sound can be set using the CONFBRIDGE\_JOIN\_SOUND variable and the leave sound can be set using the CONFBRIDGE\_LEAVE\_SOUND variable. These can be unique to the caller.

This application will not automatically answer the channel. This application will not automatically answer the channel.

## Syntax

ConfBridge([confno[,options]])

## Arguments

- confno The conference number
- options
  - a Set admin mode.
  - A Set marked mode.
  - c Announce user(s) count on joining a conference.
  - m Set initially muted.
  - M Enable music on hold when the conference has a single caller. Optionally, specify a musiconhold class to use. If one is not provided, it will use the channel's currently set music class, or default.
    - class
  - 1 Do not play message when first person enters
  - s Present menu (user or admin) when \* is received (send to menu).
  - w Wait until the marked user enters the conference.
  - q Quiet mode (don't play enter/leave sounds).

# ContinueWhile()

**Synopsis** 

Restart a While loop.

#### Description

Returns to the top of the while loop and re-evaluates the conditional.

#### Syntax

ContinueWhile()

Arguments

See Also

Application\_While Application\_EndWhile Application\_ExitWhile

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ControlPlayback

## ControlPlayback()

Synopsis

Play a file with fast forward and rewind.

# Description

This application will play back the given *filename*.

It sets the following channel variables upon completion:

- CPLAYBACKSTATUS Contains the status of the attempt as a text string
  - SUCCESS
  - USERSTOPPED
  - ERROR
- CPLAYBACKOFFSET Contains the offset in ms into the file where playback was at when it stopped. -1 is end of file.
- CPLAYBACKSTOPKEY If the playback is stopped by the user this variable contains the key that was pressed.

## Syntax

ControlPlayback(filename[,skipms[,ff[,rew[,stop[,pause[,restart[,option

#### Arguments

- filename
- skipms This is number of milliseconds to skip when rewinding or fast-forwarding.
- ff Fast-forward when this DTMF digit is received. (defaults to #)
- rew Rewind when this DTMF digit is received. (defaults to \* )
- stop Stop playback when this DTMF digit is received.
- pause Pause playback when this DTMF digit is received.
- restart Restart playback when this DTMF digit is received.
- options

• 0

• time - Start at time ms from the beginning of the file.

# Application\_DAHDIRAS

# DAHDIRAS()

## Synopsis

Executes DAHDI ISDN RAS application.

# Description

Executes a RAS server using pppd on the given channel. The channel must be a clear channel (i.e. PRI source) and a DAHDI channel to be able to use this function (No modem emulation is included).

Your pppd must be patched to be DAHDI aware.

## Syntax

DAHDIRAS(args)

## Arguments

• args - A list of parameters to pass to the pppd daemon, separated by , characters.

## See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_DAHDIScan

# DAHDIScan()

## Synopsis

Scan DAHDI channels to monitor calls.

#### Description

Allows a call center manager to monitor DAHDI channels in a convenient way. Use # to select the next channel and use \* to exit.

## Syntax

```
DAHDIScan([group])
```

#### Arguments

• group - Limit scanning to a channel group by setting this option.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_DAHDISendCallreroutingFacility

# DAHDISendCallreroutingFacility()

# **Synopsis**

Send an ISDN call rerouting/deflection facility message.

#### Description

This application will send an ISDN switch specific call rerouting/deflection facility message over the current channel. Supported switches depend upon the version of libpri in use.

#### Syntax

```
DAHDISendCallreroutingFacility(destination[,original[,reason]])
```

#### Arguments

- destination Destination number.
- original Original called number.
- reason Diversion reason, if not specified defaults to unknown

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_DAHDISendKeypadFacility

# DAHDISendKeypadFacility()

#### Synopsis

Send digits out of band over a PRI.

## Description

This application will send the given string of digits in a Keypad Facility IE over the current channel.

#### Syntax

```
DAHDISendKeypadFacility(digits)
```

#### Arguments

• digits

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_DateTime

# DateTime()

## Synopsis

Says a specified time in a custom format.

#### Description

Say the date and time in a specified format.

## **Syntax**

```
DateTime([unixtime[,timezone[,format]]])
```

#### Arguments

- unixtime time, in seconds since Jan 1, 1970. May be negative. Defaults to now.
- timezone timezone, see /usr/share/zoneinfo for a list. Defaults to machine default.

ullet format - a format the time is to be said in. See <code>voicemail.conf</code>. Defaults to <code>ABdY "digits/at" IMp</code>

# Application\_DBdel

## DBdel()

## Synopsis

Delete a key from the asterisk database.

## Description

This application will delete a *key* from the Asterisk database.

This application has been DEPRECATED in favor of the DB\_DELETE function. This application has been DEPRECATED in favor of the DB\_DELETE function.

## Syntax

```
DBdel(family, key)
```

# Arguments

• family

#### See Also

Function\_DB\_DELETE Application\_DBdeltree Function\_DB

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_DBdeltree

## **DBdeltree()**

## Synopsis

Delete a family or keytree from the asterisk database.

# Description

This application will delete a *family* or *keytree* from the Asterisk database.

#### Syntax

```
DBdeltree(family[,keytree])
```

#### Arguments

- familykeytree
- See Also

Function\_DB\_DELETE Application\_DBdel Function\_DB

# Application\_DeadAGI

DeadAGI()

Synopsis

Executes AGI on a hungup channel.

# Description

Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on **stdin** and **stdout**. As of 1.6.0, this channel will not stop dialplan execution on hangup inside of this application. Dialplan execution will continue normally, even upon hangup until the AGI application signals a desire to stop (either by exiting or, in the case of a net script, by closing the connection). A locally executed AGI script will receive SIGHUP on hangup from the channel except when using DeadAGI. A fast AGI server will correspondingly receive a HANGUP inline with the command dialog. Both of theses signals may be disabled by setting the Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on None - AGISIGHUP channel variable to no before executing the AGI application.

Use the CLI command agi show commands to list available agi commands.

This application sets the following channel variable upon completion:

- $\bullet$   $\,$  AGISTATUS The status of the attempt to the run the AGI script text string, one of:
  - SUCCESS

- FAILURE
- NOTFOUND
- HANGUP

#### Syntax

```
DeadAGI(command[,arg1[,arg2]])
```

#### Arguments

- command
- args
  - arg1
  - arg2

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Dial

## Dial()

#### Synopsis

Attempt to connect to another device or endpoint and bridge the call.

## Description

This application will place calls to one or more specified channels. As soon as one of the requested channels answers, the originating channel will be answered, if it has not already been answered. These two channels will then be active in a bridged call. All other channels that were requested will then be hung up.

Unless there is a timeout specified, the Dial application will wait indefinitely until one of the called channels answers, the user hangs up, or if all of the called channels are busy or unavailable. Dialplan executing will continue if no requested channels can be called, or if the timeout expires. This application will report normal termination if the originating channel hangs up, or if the call is bridged and either of the parties in the bridge ends the call.

If the If the <code>None</code> - <code>OUTBOUND\_GROUP</code> variable is set, all peer channels created by this application will be put into that group (as in <code>Set(GROUP()=...)</code>. If the If the <code>None</code> - <code>OUTBOUND\_GROUP\_ONCE</code> variable is set, all peer channels created by this application will be put into that group (as in <code>Set(GROUP()=...)</code>. Unlike <code>OUTBOUND\_GROUP</code>, however, the variable will be unset after use.

This application sets the following channel variables:

- DIALEDTIME This is the time from dialing a channel until when it is disconnected.
- ANSWEREDTIME This is the amount of time for actual call.
- DIALSTATUS This is the status of the call
  - CHANUNAVAIL
  - CONGESTION
  - NOANSWER
  - BUSY
  - ANSWER
  - CANCEL
  - DONTCALL For the Privacy and Screening Modes. Will be set if the called party chooses to send the calling party to the 'Go Away' script.
  - TORTURE For the Privacy and Screening Modes. Will be set if the called party chooses to send the calling party to the 'torture' script.
  - INVALIDARGS

#### Syntax

Dial(Technology/Resource[&Technology2/Resource2[&...]][,timeout[,option

#### Arguments

- Technology/Resource
  - Technology/Resource Specification of the device(s) to dial. These must be in the format of Technology/Resource, where Technology represents a particular channel driver, and Resource represents a resource available to that particular channel driver.
  - Technology2/Resource2 Optional extra devices to dial in parallel If you need more then one enter them as Technology2/Resource2&Technology3/Resourse3&.....
- timeout Specifies the number of seconds we attempt to dial the specified devices If not specified, this defaults to 136 years.
- options
  - A Play an announcement to the called party, where x is the prompt to be played
    - x The file to play to the called party
  - a Immediately answer the calling channel when the called channel answers in all cases. Normally, the calling channel is
    answered when the called channel answers, but when options such as A() and M() are used, the calling channel is not answered
    until all actions on the called channel (such as playing an announcement) are completed. This option can be used to answer the
    calling channel before doing anything on the called channel. You will rarely need to use this option, the default behavior is
    adequate in most cases.
  - C Reset the call detail record (CDR) for this call.
  - c If the Dial() application cancels this call, always set the flag to tell the channel driver that the call is answered elsewhere.
  - d Allow the calling user to dial a 1 digit extension while waiting for a call to be answered. Exit to that extension if it exists in the
    current context, or the context defined in the EXITCONTEXT variable, if it exists. Many SIP and ISDN phones cannot send DTMF
    digits until the call is connected. If you wish to use this option with these phones, you can use the Many SIP and ISDN phones
    cannot send DTMF digits until the call is connected. If you wish to use this option with these phones, you can use the Answer
    application before dialing.
  - D Send the specified DTMF strings after the called party has answered, but before the call gets bridged. The called DTMF string is sent to the called party, and the calling DTMF string is sent to the calling party. Both arguments can be used alone. If progress is specified, its DTMF is sent immediately after receiving a PROGRESS message.
    - called
    - calling
    - progress
  - $\bullet\ \ \mbox{e}$  Execute the  $\mbox{h}$  extension for peer after the call ends
  - f If x is not provided, force the CallerID sent on a call-forward or deflection to the dialplan extension of this Dial() using a dialplan hint. For example, some PSTNs do not allow CallerID to be set to anything other than the numbers assigned to you. If x is provided, force the CallerID sent to x.
  - F When the caller hangs up, transfer the called party to the specified destination and start execution at that location. Any channel variables you want the called channel to inherit from the caller channel must be prefixed with one or two underbars ('). Any channel variables you want the called channel to inherit from the caller channel must be prefixed with one or two underbars (').
    - context
    - exten
    - priority
  - F When the caller hangs up, transfer the **called** party to the next priority of the current extension and **start** execution at that location. Any channel variables you want the called channel to inherit from the caller channel must be prefixed with one or two underbars (''). Any channel variables you want the called channel to inherit from the caller channel must be prefixed with one or two underbars ("). Additionally, using this option from a Macro() or GoSub() might not make sense as there would be no return pointsAdditionally, using this option from a Macro() or GoSub() might not make sense as there would be no return points
  - g Proceed with dialplan execution at the next priority in the current extension if the destination channel hangs up.
  - G If the call is answered, transfer the calling party to the specified *priority* and the called party to the specified *priority* plus one. You cannot use any additional action post answer options in conjunction with this option. You cannot use any additional action

post answer options in conjunction with this option.

- context
- exten
- priority
- h Allow the called party to hang up by sending the DTMF sequence defined for disconnect in features.conf.
- H Allow the calling party to hang up by sending the DTMF sequence defined for disconnect in features.conf. Many SIP and ISDN phones cannot send DTMF digits until the call is connected. If you wish to allow DTMF disconnect before the dialed party answers with these phones, you can use the Many SIP and ISDN phones cannot send DTMF digits until the call is connected. If you wish to allow DTMF disconnect before the dialed party answers with these phones, you can use the Answer application before dialing.
- i Asterisk will ignore any forwarding requests it may receive on this dial attempt.
- I Asterisk will ignore any connected line update requests or redirecting party update requests it may receive this dial attempt.
- k Allow the called party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
- K Allow the calling party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
- L Limit the call to x milliseconds. Play a warning when y milliseconds are left. Repeat the warning every z milliseconds until time expires. This option is affected by the following variables: If set, this variable causes Asterisk to play the prompts to the caller. If set, this variable causes Asterisk to play the prompts to the callee. If specified, *filename* specifies the sound prompt to play when the timeout is reached. If not set, the time remaining will be announced. If specified, *filename* specifies the sound prompt to play when the call begins. If not set, the time remaining will be announced. If specified, *filename* specifies the sound prompt to play as a warning when time x is reached. If not set, the time remaining will be announced.
  - x Maximum call time, in milliseconds
  - y Warning time, in milliseconds
  - z Repeat time, in milliseconds
- m Provide hold music to the calling party until a requested channel answers. A specific music on hold *class* (as defined in musiconhold.conf) can be specified.
  - class
- M Execute the specified *macro* for the **called** channel before connecting to the calling channel. Arguments can be specified to the Macro using ^ as a delimiter. The macro can set the variable MACRO\_RESULT to specify the following actions after the macro is finished executing: If set, this action will be taken after the macro finished executing. You cannot use any additional action post answer options in conjunction with this option. Also, pbx services are not run on the peer (called) channel, so you will not be able to set timeouts via the TIMEOUT() function in this macro. You cannot use any additional action post answer options in conjunction with this option. Also, pbx services are not run on the peer (called) channel, so you will not be able to set timeouts via the TIMEOUT() function in this macro. Be aware of the limitations that macros have, specifically with regards to use of the WaitExten application. For more information, see the documentation for Macro()
  - macro Name of the macro that should be executed.
  - arg Macro arguments
- n This option is a modifier for the call screening/privacy mode. (See the p and P options.) It specifies that no introductions are to be saved in the priv-callerintros directory.
  - delete With delete either not specified or set to 0, the recorded introduction will not be deleted if the caller hangs up
    while the remote party has not yet answered. With delete set to 1, the introduction will always be deleted.
- N This option is a modifier for the call screening/privacy mode. It specifies that if Caller\*ID is present, do not screen the call.
- o If x is not provided, specify that the CallerID that was present on the calling channel be stored as the CallerID on the called channel. This was the behavior of Asterisk 1.0 and earlier. If x is provided, specify the CallerID stored on the called channel. Note that o(\${CALLERID(all)}) is similar to option o without the parameter.
- O Enables **operator services** mode. This option only works when bridging a DAHDI channel to another DAHDI channel only. if specified on non-DAHDI interfaces, it will be ignored. When the destination answers (presumably an operator services station), the originator no longer has control of their line. They may hang up, but the switch will not release their line until the destination party (the operator) hangs up.
  - mode With mode either not specified or set to 1, the originator hanging up will cause the phone to ring back immediately. With mode set to 2, when the operator flashes the trunk, it will ring their phone back.
- p This option enables screening mode. This is basically Privacy mode without memory.
- P Enable privacy mode. Use x as the family/key in the AstDB database if it is provided. The current extension is used if a database family/key is not specified.
  - x
- r Default: Indicate ringing to the calling party, even if the called party isn't actually ringing. Pass no audio to the calling party until the called channel has answered.
  - · tone Indicate progress to calling party. Send audio 'tone' from indications.conf
- s Hang up the call x seconds after the called party has answered the call.
  - x
- s Force the outgoing callerid tag parameter to be set to the string x. Works with the f option.
  - ×
- t Allow the called party to transfer the calling party by sending the DTMF sequence defined in features.conf. This setting does not perform policy enforcement on transfers initiated by other methods.
- T Allow the calling party to transfer the called party by sending the DTMF sequence defined in features.conf. This setting does not perform policy enforcement on transfers initiated by other methods.
- U Execute via Gosub the routine x for the **called** channel before connecting to the calling channel. Arguments can be specified to the Gosub using ^ as a delimiter. The Gosub routine can set the variable GOSUB\_RESULT to specify the following actions after the Gosub returns. You cannot use any additional action post answer options in conjunction with this option. Also, pbx services

are not run on the peer (called) channel, so you will not be able to set timeouts via the TIMEOUT() function in this routine. You cannot use any additional action post answer options in conjunction with this option. Also, pbx services are not run on the peer (called) channel, so you will not be able to set timeouts via the TIMEOUT() function in this routine.

- x Name of the subroutine to execute via Gosub
- · arg Arguments for the Gosub routine
- u Works with the f option.
  - x Force the outgoing callerid presentation indicator parameter to be set to one of the values passed in x:

```
allowed_not_screened allowed_passed_screen allowed_failed_screen allowed prohib_not_screened prohib_passed_screen prohib_failed_screen prohib unavailable
```

- w Allow the called party to enable recording of the call by sending the DTMF sequence defined for one-touch recording in features.conf.
- W Allow the calling party to enable recording of the call by sending the DTMF sequence defined for one-touch recording in features.conf.
- x Allow the called party to enable recording of the call by sending the DTMF sequence defined for one-touch automixmonitor in features.conf.
- x Allow the calling party to enable recording of the call by sending the DTMF sequence defined for one-touch automixmonitor in features, conf.
- z On a call forward, cancel any dial timeout which has been set for this call.
- URL The optional URL will be sent to the called party if the channel driver supports it.

# Application\_Dictate

### Dictate()

#### Synopsis

Virtual Dictation Machine.

#### Description

Start dictation machine using optional *base\_dir* for files.

# Syntax

```
Dictate([base_dir[,filename]])
```

#### Arguments

- base\_dir
- filename

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Directory

# Directory()

## Synopsis

Provide directory of voicemail extensions.

## Description

This application will present the calling channel with a directory of extensions from which they can search by name. The list of names and corresponding extensions is retrieved from the voicemail configuration file, voicemail.conf.

This application will immediately exit if one of the following DTMF digits are received and the extension to jump to exists:

0 - Jump to the 'o' extension, if it exists. \* - Jump to the 'a' extension, if it exists.

## Syntax

```
Directory([vm-context[,dial-context[,options]]])
```

#### Arguments

- vm-context This is the context within voicemail.conf to use for the Directory. If not specified and searchcontexts=no in voicemail.conf, then default will be assumed.
- dial-context This is the dialplan context to use when looking for an extension that the user has selected, or when jumping to the o
  or a extension. If not specified, the current context will be used.
- options Only one of the Only one of the f, l, or b options may be specified. If more than one is specified, then Directory will act as if b was specified. The number of characters for the user to type defaults to 3.
  - e In addition to the name, also read the extension number to the caller before presenting dialing options.
  - f Allow the caller to enter the first name of a user in the directory instead of using the last name. If specified, the optional number argument will be used for the number of characters the user should enter.
  - 1 Allow the caller to enter the last name of a user in the directory. This is the default. If specified, the optional number argument
    will be used for the number of characters the user should enter.
  - b Allow the caller to enter either the first or the last name of a user in the directory. If specified, the optional number argument will be used for the number of characters the user should enter.
  - m Instead of reading each name sequentially and asking for confirmation, create a menu of up to 8 names.
  - n Read digits even if the channel is not answered.
  - p Pause for n milliseconds after the digits are typed. This is helpful for people with cellphones, who are not holding the receiver to their ear while entering DTMF.

# Application\_DISA

## DISA()

#### Synopsis

Direct Inward System Access.

#### Description

The DISA, Direct Inward System Access, application allows someone from outside the telephone switch (PBX) to obtain an **internal** system dialtone and to place calls from it as if they were placing a call from within the switch. DISA plays a dialtone. The user enters their numeric passcode, followed by the pound sign #. If the passcode is correct, the user is then given system dialtone within *context* on which a call may be placed. If the user enters an invalid extension and extension i exists in the specified *context*, it will be used.

Be aware that using this may compromise the security of your PBX.

The arguments to this application (in extensions.conf) allow either specification of a single global passcode (that everyone uses), or individual passcodes contained in a file ( filename ).

The file that contains the passcodes (if used) allows a complete specification of all of the same arguments available on the command line, with the sole exception of the options. The file may contain blank lines, or comments starting with # or ;.

#### Syntax

DISA(passcode|filename[,context[,cid[,mailbox[@context][,options]]]])

#### Arguments

- passcode | filename If you need to present a DISA dialtone without entering a password, simply set passcode to no-password You
  may specified a filename instead of a passcode, this filename must contain individual passcodes
- context Specifies the dialplan context in which the user-entered extension will be matched. If no context is specified, the DISA
  application defaults to the disa context. Presumably a normal system will have a special context set up for DISA use with some or a lot
  of restrictions.
- cid Specifies a new (different) callerid to be used for this call.
- mailbox Will cause a stutter-dialtone (indication dialrecall) to be used, if the specified mailbox contains any new messages.
  - mailbox
  - context
- options
  - n The DISA application will not answer initially.
  - p The extension entered will be considered complete when a # is entered.

# Application\_EAGI

## EAGI()

# Synopsis

Executes an EAGI compliant application.

#### Description

Using 'EAGI' provides enhanced AGI, with incoming audio available out of band on file descriptor 3.

Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on **stdin** and **stdout**. As of 1.6.0, this channel will not stop dialplan execution on hangup inside of this application. Dialplan execution will continue normally, even upon hangup until the AGI application signals a desire to stop (either by exiting or, in the case of a net script, by closing the connection). A locally executed AGI script will receive SIGHUP on hangup from the channel except when using DeadAGI. A fast AGI server will correspondingly receive a HANGUP inline with the command dialog. Both of theses signals may be disabled by setting the Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by

communicating with the AGI protocol on  $\mathtt{None}$  -  $\mathtt{AGISIGHUP}$  channel variable to  $\mathtt{no}$  before executing the AGI application.

Use the CLI command agi show commands to list available agi commands.

This application sets the following channel variable upon completion:

- AGISTATUS The status of the attempt to the run the AGI script text string, one of:
  - SUCCESS
  - FAILURE
  - NOTFOUND
  - HANGUP

# Application\_ExtenSpy

## ExtenSpy()

#### Synopsis

Listen to a channel, and optionally whisper into it.

## Description

This application is used to listen to the audio from an Asterisk channel. This includes the audio coming in and out of the channel being spied on. Only channels created by outgoing calls for the specified extension will be selected for spying. If the optional context is not supplied, the current channel's context will be used.

While spying, the following actions may be performed:

- Dialing # cycles the volume level.
- Dialing \* will stop spying and look for another channel to spy on.

The The X option supersedes the three features above in that if a valid single digit extension exists in the correct context ChanSpy will exit to it. This also disables choosing a channel based on chanprefix and a digit sequence.

#### Syntax

ExtenSpy(exten[@context][,options])

#### Arguments

- exten
  - exten Specify extension.
  - context Optionally specify a context, defaults to default.
- options
  - b Only spy on channels involved in a bridged call.
  - B Instead of whispering on a single channel barge in on both channels involved in the call.
  - 0
- digit Specify a DTMF digit that can be used to spy on the next available channel.
- d Override the typical numeric DTMF functionality and instead use DTMF to switch between spy modes.
  - 4 spy mode
  - 5 whisper mode
  - 6 barge mode
- e Enable **enforced** mode, so the spying channel can only monitor extensions whose name is in the *ext*: delimited list.
- E Exit when the spied-on channel hangs up.
- g both both grp and SPYGROUP can contain either a single group or a colon-delimited list of groups, such as sales:support:accounting.

- grp Only spy on channels in which one or more of the groups listed in grp matches one or more groups from the SPYGROUP variable set on the channel to be spied upon.
- n Say the name of the person being spied on if that person has recorded his/her name. If a context is specified, then that voicemail context will be searched when retrieving the name, otherwise the default context be used when searching for the name (i.e. if SIP/1000 is the channel being spied on and no mailbox is specified, then 1000 will be used when searching for the name).
  - mailbox
  - context
- o Only listen to audio coming from this channel.
- q Don't play a beep when beginning to spy on a channel, or speak the selected channel name.
- r Record the session to the monitor spool directory. An optional base for the filename may be specified. The default is chanspy.
  - basename
- s Skip the playback of the channel type (i.e. SIP, IAX, etc) when speaking the selected channel name.
- S Stop when there are no more extensions left to spy on.
- v Adjust the initial volume in the range from -4 to 4. A negative value refers to a quieter setting.
  - value
- w Enable whisper mode, so the spying channel can talk to the spied-on channel.
- W Enable private whisper mode, so the spying channel can talk to the spied-on channel but cannot listen to that channel.
- x
- digit Specify a DTMF digit that can be used to exit the application.
- X Allow the user to exit ChanSpy to a valid single digit numeric extension in the current context or the context specified by the SPY\_EXIT\_CONTEXT channel variable. The name of the last channel that was spied on will be stored in the SPY\_CHANNEL variable.
- 4 spy mode
- 5 whisper mode
- 6 barge mode

## Application ExternalIVR

## ExternalIVR()

## Synopsis

Interfaces with an external IVR application.

#### Description

Either forks a process to run given command or makes a socket to connect to given host and starts a generator on the channel. The generator's play list is controlled by the external application, which can add and clear entries via simple commands issued over its stdout. The external application will receive all DTMF events received on the channel, and notification if the channel is hung up. The received on the channel, and notification if the channel is hung up. The application will not be forcibly terminated when the channel is hung up. For more information see doc/AST.pdf.

#### Syntax

ExternalIVR([arg1][,arg2][,options])

#### Arguments

- command|ivr://host
  - arg1
  - arg2
- options
  - n Tells ExternalIVR() not to answer the channel.
  - i Tells ExternalIVR() not to send a hangup and exit when the channel receives a hangup, instead it sends an I informative
    message meaning that the external application MUST hang up the call with an H command.
  - d Tells ExternalIVR() to run on a channel that has been hung up and will not look for hangups. The external application must
    exit with an E command.

# Application\_Festival

# Festival()

## Synopsis

Say text to the user.

## Description

Connect to Festival, send the argument, get back the waveform, play it to the user, allowing any given interrupt keys to immediately terminate and return the value, or any to allow any number back (useful in dialplan).

## **Syntax**

```
Festival(text[,intkeys])
```

## Arguments

textintkeys

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_FollowMe

# FollowMe()

Synopsis

Find-Me/Follow-Me application.

# Description

This application performs Find-Me/Follow-Me functionality for the caller as defined in the profile matching the *followmeid* parameter in followme.conf. If the specified *followmeid* profile doesn't exist in followme.conf, execution will be returned to the dialplan and call execution will continue at the next priority.

Returns -1 on hangup.

# Syntax

```
FollowMe(followmeid[,options])
```

## Arguments

- followmeid
- options
  - s Playback the incoming status message prior to starting the follow-me step(s)
  - a Record the caller's name so it can be announced to the callee on each step.
  - n Playback the unreachable status message if we've run out of steps to reach the or the callee has elected not to be reachable.
  - d Disable the 'Please hold while we try to connect your call' announcement.

# Application\_ForkCDR

## ForkCDR()

Synopsis

Forks the Call Data Record.

#### Description

Causes the Call Data Record to fork an additional cdr record starting from the time of the fork call. This new cdr record will be linked to end of the list of cdr records attached to the channel. The original CDR has a LOCKED flag set, which forces most cdr operations to skip it, except for the functions that set the answer and end times, which ignore the LOCKED flag. This allows all the cdr records in the channel to be 'ended' together when the channel is closed.

The CDR() func (when setting CDR values) normally ignores the LOCKED flag also, but has options to vary its behavior. The 'T' option (described below), can override this behavior, but beware the risks.

First, this app finds the last cdr record in the list, and makes a copy of it. This new copy will be the newly forked cdr record. Next, this new record is linked to the end of the cdr record list. Next, The new cdr record is RESET (unless you use an option to prevent this)

#### This means that:

- 1. All flags are unset on the cdr record
- 2. the start, end, and answer times are all set to zero.
- 3. the billsec and duration fields are set to zero.
- 4. the start time is set to the current time.
- 5. the disposition is set to NULL.

Next, unless you specified the v option, all variables will be removed from the original cdr record. Thus, the v option allows any CDR variables to be replicated to all new forked cdr records. Without the v option, the variables on the original are effectively moved to the new forked cdr record.

Next, if the s option is set, the provided variable and value are set on the original cdr record.

Next, if the a option is given, and the original cdr record has an answer time set, then the new forked cdr record will have its answer time set to its start time. If the old answer time were carried forward, the answer time would be earlier than the start time, giving strange duration and billsec

times.

If the d option was specified, the disposition is copied from the original cdr record to the new forked cdr. If the D option was specified, the destination channel field in the new forked CDR is erased. If the e option was specified, the 'end' time for the original cdr record is set to the current time. Future hang-up or ending events will not override this time stamp. If the A option is specified, the original cdr record will have it ANS\_LOCKED flag set, which prevent future answer events from updating the original cdr record's disposition. Normally, an ANSWERED event would mark all cdr records in the chain as ANSWERED. If the T option is specified, the original cdr record will have its DONT\_TOUCH flag set, which will force the cdr\_answer, cdr\_end, and cdr\_setvar functions to leave that cdr record alone.

And, last but not least, the original cdr record has its LOCKED flag set. Almost all internal CDR functions (except for the funcs that set the end, and answer times, and set a variable) will honor this flag and leave a LOCKED cdr record alone. This means that the newly created forked cdr record will be affected by events transpiring within Asterisk, with the previously noted exceptions.

### Syntax

ForkCDR([options])

#### Arguments

- options
  - a Update the answer time on the NEW CDR just after it's been inited. The new CDR may have been answered already. The
    reset that forkcdr does will erase the answer time. This will bring it back, but the answer time will be a copy of the fork/start time.
    It will only do this if the initial cdr was indeed already answered.
  - A Lock the original CDR against the answer time being updated. This will allow the disposition on the original CDR to remain
    the same.
  - d Copy the disposition forward from the old cdr, after the init.
  - D Clear the dstchannel on the new CDR after reset.
  - e End the original CDR. Do this after all the necessary data is copied from the original CDR to the new forked CDR.
  - r Do NOT reset the new cdr.
  - s(name=val) Set the CDR var name in the original CDR, with value val.
  - T Mark the original CDR with a DONT\_TOUCH flag. setvar, answer, and end cdr funcs will obey this flag; normally they don't
    honor the LOCKED flag set on the original CDR record. Using this flag may cause CDR's not to have their end times updated! It
    is suggested that if you specify this flag, you might wish to use the Using this flag may cause CDR's not to have their end times
    updated! It is suggested that if you specify this flag, you might wish to use the e flag as well!.
  - v When the new CDR is forked, it gets a copy of the vars attached to the current CDR. The vars attached to the original CDR are removed unless this option is specified.

# Application\_Goto

## Goto()

## Synopsis

Jump to a particular priority, extension, or context.

## Description

This application will set the current context, extension, and priority in the channel structure. After

it completes, the pbx engine will continue dialplan execution at the specified location. If no specific *extension*, or *extension* and *context*, are specified, then this application will just set the specified *priority* of the current extension.

At least a *priority* is required as an argument, or the goto will return a -1, and the channel and call will be terminated.

If the location that is put into the channel information is bogus, and asterisk cannot find that location in the dialplan, then the execution engine will try to find and execute the code in the i (invalid) extension in the current context. If that does not exist, it will try to execute the h extension. If neither the h nor i extensions have been defined, the channel is hung up, and the execution of instructions on the channel is terminated. What this means is that, for example, you specify a context that does not exist, then it will not be possible to find the h or i extensions, and the call will terminate!

## **Syntax**

```
Goto([context[,extensions,priority]])
```

#### Arguments

- context
- extensions
- priority

## Application\_Gotolf

Gotolf()

Synopsis

Conditional goto.

#### Description

This application will set the current context, extension, and priority in the channel structure based on the evaluation of the given condition. After this application completes, the pbx engine will continue dialplan execution at the specified location in the dialplan. The labels are specified with the same syntax as used within the Goto application. If the label chosen by the condition is omitted, no jump is performed, and the execution passes to the next instruction. If the target

location is bogus, and does not exist, the execution engine will try to find and execute the code in the i (invalid) extension in the current context. If that does not exist, it will try to execute the h extension. If neither the h nor i extensions have been defined, the channel is hung up, and the execution of instructions on the channel is terminated. Remember that this command can set the current context, and if the context specified does not exist, then it will not be able to find any 'h' or 'i' extensions there, and the channel and call will both be terminated!.

## Syntax

GotoIf(condition?[labeliftrue][:labeliffalse])

#### Arguments

- condition
- destination
  - labeliftrue Continue at *labeliftrue* if the condition is true.
  - labeliffalse Continue at labeliffalse if the condition is false.

#### See Also

Application\_GotolfTime Application\_GosubIf Application\_MacroIf

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r324178.

# Application\_GotolfTime

## GotolfTime()

## Synopsis

Conditional Goto based on the current time.

#### Description

This application will set the context, extension, and priority in the channel structure based on the evaluation of the given time specification. After this application completes, the pbx engine will continue dialplan execution at the specified location in the dialplan. If the current time is within the given time specification, the channel will continue at *labeliftrue*. Otherwise the channel will continue at *labeliffalse*. If the label chosen by the condition is omitted, no jump is performed, and execution passes to the next instruction. If the target jump location is bogus, the same actions would be taken as for Goto. Further information on the time specification can be found in examples illustrating how to do time-based context includes in the dialplan.

## Syntax

GotoIfTime(timesweekdaysmdaysmonths[,timezone]?[labeliftrue][:labeliff

### Arguments

- condition
  - times
  - weekdays
  - mdays
  - months
  - timezone
- destination
  - labeliftrue
  - labeliffalse

# Application\_JabberSend

## JabberSend()

#### Synopsis

Sends an XMPP message to a buddy.

### Description

Sends the content of *message* as text message from the given *account* to the buddy identified by *jid* 

Example: JabberSend(asterisk,bob@domain.com,Hello world) sends "Hello world" to bob@domain.com as an XMPP message from the account asterisk, configured in jabber.conf.

## **Syntax**

JabberSend(account, jid, message)

#### Arguments

- account The local named account to listen on (specified in jabber.conf)
- jid Jabber ID of the buddy to send the message to. It can be a bare JID (username@domain) or a full JID (username@domain/resource).
- message The message to send.

# Application\_JACK

## JACK()

### Synopsis

Jack Audio Connection Kit

## Description

When executing this application, two jack ports will be created; one input and one output. Other applications can be hooked up to these ports to access audio coming from, or being send to the channel.

## **Syntax**

```
JACK([options])
```

#### Arguments

- options
  - s
- name Connect to the specified jack server name
- i
- name Connect the output port that gets created to the specified jack input port
- 0
- name Connect the input port that gets created to the specified jack output port
- c
- name By default, Asterisk will use the channel name for the jack client name. Use this option to specify a custom client name.

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Macro

## Macro()

### Synopsis

Macro Implementation.

## Description

Executes a macro using the context macro- *name*, jumping to the s extension of that context and executing each step, then returning when the steps end.

The calling extension, context, and priority are stored in The calling extension, context, and priority are stored in None - MACRO\_EXTEN, The calling extension, context, and priority are stored in None - MACRO\_CONTEXT and The calling extension, context, and priority are stored in None - MACRO\_PRIORITY respectively. Arguments become The calling extension, context, and priority are stored in None - ARG1, The calling extension, context, and priority are stored in None - ARG2, etc in the macro context.

If you Goto out of the Macro context, the Macro will terminate and control will be returned at the location of the Goto.

If If None - MACRO\_OFFSET is set at termination, Macro will attempt to continue at priority MACRO\_OFFSET + N + 1 if such a step exists, and N + 1 otherwise.

Because of the way Macro is implemented (it executes the priorities contained within it via sub-engine), and a fixed per-thread memory stack allowance, macros are limited to 7 levels of nesting (macro calling macro calling macro, etc.); It may be possible that stack-intensive

applications in deeply nested macros could cause asterisk to crash earlier than this limit. It is advised that if you need to deeply nest macro calls, that you use the Gosub application (now allows arguments like a Macro) with explict Return() calls instead.

Use of the application WaitExten within a macro will not function as expected. Please use the Read application in order to read DTMF from a channel currently executing a macro.

## Syntax

```
Macro(name[,arg1[,arg2[,...]]])
```

#### Arguments

- name The name of the macro
- args • arg1
  - arg2

## Application\_MeetMe

## MeetMe()

#### Synopsis

MeetMe conference bridge.

#### Description

Enters the user into a specified MeetMe conference. If the *confno* is omitted, the user will be prompted to enter one. User can exit the conference by hangup, or if the p option is specified, by pressing #.

The DAHDI kernel modules and at least one hardware driver (or dahdi\_dummy) must be present for conferencing to operate properly. In addition, the chan\_dahdi channel driver must be loaded for the The DAHDI kernel modules and at least one hardware driver (or dahdi\_dummy) must be present for conferencing to operate properly. In addition, the chan\_dahdi channel driver must be loaded for the i and r options to operate at all.

## Syntax

MeetMe([confno[,options[,pin]]])

### Arguments

- confno The conference number
- options
  - a Set admin mode.
  - A Set marked mode.
  - b Run AGI script specified in MEETME\_AGI\_BACKGROUND Default: conf-background.agi. This does not work with non-DAHDI channels in the same conference). This does not work with non-DAHDI channels in the same conference).
  - c Announce user(s) count on joining a conference.
  - C Continue in dialplan when kicked out of conference.
  - d Dynamically add conference.
  - D Dynamically add conference, prompting for a PIN.
  - e Select an empty conference.
  - E Select an empty pinless conference.
  - F Pass DTMF through the conference.
  - G Play an intro announcement in conference.
    - x The file to playback
  - i Announce user join/leave with review.
  - I Announce user join/leave without review.
  - 1 Set listen only mode (Listen only, no talking).
  - m Set initially muted.
  - M Enable music on hold when the conference has a single caller. Optionally, specify a musiconhold class to use. If one is not provided, it will use the channel's currently set music class, or default.

- class
- o Set talker optimization treats talkers who aren't speaking as being muted, meaning (a) No encode is done on transmission and (b) Received audio that is not registered as talking is omitted causing no buildup in background noise.
- p Allow user to exit the conference by pressing # (default) or any of the defined keys. If keys contain \* this will override option s
   The key used is set to channel variable MEETME\_EXIT\_KEY.
  - keys
- P Always prompt for the pin even if it is specified.
- q Quiet mode (don't play enter/leave sounds).
- r Record conference (records as MEETME\_RECORDINGFILE using format MEETME\_RECORDINGFORMAT. Default filename is meetme-conf-rec-\${CONFNO}-\${UNIQUEID} and the default format is wav.
- s Present menu (user or admin) when \* is received (send to menu).
- t Set talk only mode. (Talk only, no listening).
- T Set talker detection (sent to manager interface and meetme list).
- w Wait until the marked user enters the conference.
  - secs
- x Close the conference when last marked user exits
- X Allow user to exit the conference by entering a valid single digit extension MEETME\_EXIT\_CONTEXT or the current context if
  that variable is not defined.
- 1 Do not play message when first person enters
- s Kick the user x seconds after he entered into the conference.
  - <sub>x</sub>
- L Limit the conference to x ms. Play a warning when y ms are left. Repeat the warning every z ms. The following special variables can be used with this option: File to play when time is up. File to play as warning if y is defined. The default is to say the time remaining.
  - x
  - Y
- •

• pin

# Application\_MeetMeAdmin

### MeetMeAdmin()

### Synopsis

MeetMe conference administration.

### Description

Run admin command for conference confno.

Will additionally set the variable Will additionally set the variable None - MEETMEADMINSTATUS with one of the following values:

- MEETMEADMINSTATUS -
  - NOPARSE Invalid arguments.
  - NOTFOUND User specified was not found.
  - FAILED Another failure occurred.
  - OK The operation was completed successfully.

## **Syntax**

MeetMeAdmin(confno,command[,user])

### Arguments

- confno
- command
  - e Eject last user that joined.
  - E Extend conference end time, if scheduled.
  - $\bullet \;\; k$  Kick one user out of conference.
  - K Kick all users out of conference.
  - 1 Unlock conference.
  - L Lock conference.
  - m Unmute one user.
  - M Mute one user.
  - n Unmute all users in the conference.
  - N Mute all non-admin users in the conference.
  - r Reset one user's volume settings.
  - · R Reset all users volume settings.
  - s Lower entire conference speaking volume.
  - s Raise entire conference speaking volume.
  - t Lower one user's talk volume.
  - T Raise one user's talk volume.
  - u Lower one user's listen volume.
  - U Raise one user's listen volume.
  - v Lower entire conference listening volume.
  - v Raise entire conference listening volume.
- user

## Application\_MeetMeChannelAdmin

## MeetMeChannelAdmin()

## Synopsis

MeetMe conference Administration (channel specific).

## Description

Run admin *command* for a specific *channel* in any conference.

### Syntax

MeetMeChannelAdmin(channel,command)

#### Arguments

- channel
- command

- k Kick the specified user out of the conference he is in.
- m Unmute the specified user.
- M Mute the specified user.

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r324178.

## Application\_MeetMeCount

## MeetMeCount()

Synopsis

MeetMe participant count.

## Description

Plays back the number of users in the specified MeetMe conference. If var is specified, playback will be skipped and the value will be returned in the variable. Upon application completion, MeetMeCount will hangup the channel, unless priority n+1 exists, in which case priority progress will continue.

### Syntax

MeetMeCount(confno[,var])

#### Arguments

- confno Conference number.
- var

# Application\_Milliwatt

## Milliwatt()

Synopsis

Generate a Constant 1004Hz tone at 0dbm (mu-law).

# Description

Previous versions of this application generated the tone at 1000Hz. If for some reason you would prefer that behavior, supply the o option to get the old behavior.

## **Syntax**

```
Milliwatt([options])
```

#### Arguments

- $\bullet$  options
  - o Generate the tone at 1000Hz like previous version.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_MinivmAccMess

## MinivmAccMess()

### Synopsis

Record account specific messages.

### Description

This application is part of the Mini-Voicemail system, configured in minium.conf.

Use this application to record account specific audio/video messages for busy, unavailable and temporary messages.

Account specific directories will be created if they do not exist.

- MVM\_ACCMESS\_STATUS This is the result of the attempt to record the specified greeting. FAILED is set if the file can't be created.
  - SUCCESS
  - FAILED

#### Syntax

```
MinivmAccMess(usernamedomain[,options])
```

### Arguments

- mailbox
  - username Voicemail username
  - domain Voicemail domain
- options
  - u Record the unavailable greeting.
  - b Record the busy greeting.
  - t Record the temporary greeting.
  - n Account name.

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_MinivmDelete

## MinivmDelete()

## Synopsis

Delete Mini-Voicemail voicemail messages.

## Description

This application is part of the Mini-Voicemail system, configured in minium.conf.

It deletes voicemail file set in MVM\_FILENAME or given filename.

- MVM\_DELETE\_STATUS This is the status of the delete operation.
  - SUCCESS
  - FAILED

#### Syntax

MinivmDelete(filename)

### Arguments

• filename - File to delete

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_MinivmGreet

## MinivmGreet()

## Synopsis

Play Mini-Voicemail prompts.

#### Description

This application is part of the Mini-Voicemail system, configured in minivm.conf.

MinivmGreet() plays default prompts or user specific prompts for an account.

Busy and unavailable messages can be choosen, but will be overridden if a temporary message exists for the account.

- MVM\_GREET\_STATUS This is the status of the greeting playback.
  - SUCCESS
  - USEREXIT
  - FAILED

## **Syntax**

```
MinivmGreet(usernamedomain[,options])
```

#### Arguments

- mailbox
  - username Voicemail username
  - domain Voicemail domain
- options
  - b Play the busy greeting to the calling party.
  - s Skip the playback of instructions for leaving a message to the calling party.
  - u Play the unavailable greeting.

# Application\_MinivmMWI

# MinivmMWI()

### Synopsis

Send Message Waiting Notification to subscriber(s) of mailbox.

## Description

This application is part of the Mini-Voicemail system, configured in minium.conf.

MinivmMWI is used to send message waiting indication to any devices whose channels have subscribed to the mailbox passed in the first parameter.

## **Syntax**

```
MinivmMWI(usernamedomain,urgent,new,old)
```

### Arguments

- mailbox
  - username Voicemail username
  - domain Voicemail domain
- urgent Number of urgent messages in mailbox.
- new Number of new messages in mailbox.
- old Number of old messages in mailbox.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_MinivmNotify

## MinivmNotify()

#### Synopsis

Notify voicemail owner about new messages.

#### Description

This application is part of the Mini-Voicemail system, configured in minivm.conf.

MiniVMnotify forwards messages about new voicemail to e-mail and pager. If there's no user account for that address, a temporary account will be used with default options (set in minivm.conf).

If the channel variable If the channel variable None - MVM\_COUNTER is set, this will be used in the message file name and available in the template for the message.

If no template is given, the default email template will be used to send email and default pager template to send paging message (if the user account is configured with a paging address.

- MVM\_NOTIFY\_STATUS This is the status of the notification attempt
  - SUCCESS
  - FAILED

## **Syntax**

MinivmNotify(usernamedomain[,options])

### Arguments

- mailbox
  - username Voicemail username
  - domain Voicemail domain
- options
  - template E-mail template to use for voicemail notification

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_MinivmRecord

## MinivmRecord()

#### Synopsis

Receive Mini-Voicemail and forward via e-mail.

#### Description

This application is part of the Mini-Voicemail system, configured in minium.conf

MiniVM records audio file in configured format and forwards message to e-mail and pager.

If there's no user account for that address, a temporary account will be used with default options.

The recorded file name and path will be stored in The recorded file name and path will be stored in None - MVM\_FILENAME and the duration of the message will be stored in The recorded file name and path will be stored in None - MVM DURATION

If the caller hangs up after the recording, the only way to send the message and clean up is to execute in the If the caller hangs up after the recording, the only way to send the message and clean up is to execute in the h extension. The application will exit if any of the following DTMF digits are received and the requested extension exist in the current context.

- MVM\_RECORD\_STATUS This is the status of the record operation
  - SUCCESS
  - USEREXIT
  - FAILED

## Syntax

MinivmRecord(usernamedomain[,options])

## Arguments

- mailbox
  - username Voicemail username
  - domain Voicemail domain
- options
  - 0 Jump to the  $\circ$  extension in the current dialplan context.
  - \* Jump to the a extension in the current dialplan context.
  - g Use the specified amount of gain when recording the voicemail message. The units are whole-number decibels (dB).
    - gain Amount of gain to use

# Application\_MixMonitor

### MixMonitor()

#### Synopsis

Record a call and mix the audio during the recording. Use of StopMixMonitor is required to guarantee the audio file is available for processing during dialplan execution.

#### Description

Records the audio on the current channel to the specified file.

This application does not automatically answer and should be preceded by an application such as Answer or Progress().

• MIXMONITOR\_FILENAME - Will contain the filename used to record.

## **Syntax**

```
MixMonitor(filenameextension[,options[,command]])
```

#### Arguments

- $\bullet$  file
  - filename If filename is an absolute path, uses that path, otherwise creates the file in the configured monitoring directory from asterisk.conf.
  - extension
- options
  - a Append to the file instead of overwriting it.
  - b Only save audio to the file while the channel is bridged. Does not include conferences or sounds played to each bridged partyDoes not include conferences or sounds played to each bridged party If you utilize this option inside a Local channel, you must make sure the Local channel is not optimized away. To do this, be sure to call your Local channel with the If you utilize this option inside a Local channel, you must make sure the Local channel is not optimized away. To do this, be sure to call your Local channel with the /n option. For example: Dial(Local/start@mycontext/n)
  - v Adjust the **heard** volume by a factor of x (range -4 to 4)
    - х
  - V Adjust the **spoken** volume by a factor of x (range -4 to 4)
    - 2
  - w Adjust both, heard and spoken volumes by a factor of x (range -4 to 4)
- command Will be executed when the recording is over. Any strings matching ^{x} will be unescaped to x. All variables will be evaluated at the time MixMonitor is called.

Application_UnpauseMonitor
```

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r336877.

## Application\_Monitor

## Monitor()

## Synopsis

Monitor a channel.

## Description

Used to start monitoring a channel. The channel's input and output voice packets are logged to files until the channel hangs up or monitoring is stopped by the StopMonitor application.

By default, files are stored to /var/spool/asterisk/monitor/. Returns -1 if monitor files can't be opened or if the channel is already monitored, otherwise 0.

### **Syntax**

```
Monitor([file_format[:urlbase][,fname_base[,options]]])
```

#### Arguments

- file\_format
  - file\_format optional, if not set, defaults to wav
  - urlbase
- fname\_base if set, changes the filename used to the one specified.
- options
  - m when the recording ends mix the two leg files into one and delete the two leg files. If the variable MONITOR\_EXEC is set, the application referenced in it will be executed instead of soxmix/sox and the raw leg files will NOT be deleted automatically. soxmix/sox or MONITOR\_EXEC is handed 3 arguments, the two leg files and a target mixed file name which is the same as the leg file names only without the in/out designator. If MONITOR\_EXEC\_ARGS is set, the contents will be passed on as additional arguments to MONITOR\_EXEC. Both MONITOR\_EXEC and the Mix flag can be set from the administrator interface.
  - b Don't begin recording unless a call is bridged to another channel.
  - i Skip recording of input stream (disables m option).
  - o Skip recording of output stream (disables m option).

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Morsecode

## Morsecode()

## Synopsis

Plays morse code.

### Description

Plays the Morse code equivalent of the passed string.

This application does not automatically answer and should be preceded by an application such as Answer() or Progress().

This application uses the following variables:

- MORSEDITLEN Use this value in (ms) for length of dit
- MORSETONE The pitch of the tone in (Hz), default is 800

## **Syntax**

Morsecode(string)

#### Arguments

string - String to playback as morse code to channel

#### See Also

Application\_SayAlpha

# Application\_MP3Player

## MP3Player()

## Synopsis

Play an MP3 file or M3U playlist file or stream.

### Description

Executes mpg123 to play the given location, which typically would be a mp3 filename or m3u playlist filename or a URL. Please read http://en.wikipedia.org/wiki/M3U to see how M3U playlist file format is like. Example usage would be exten =>

1234,1,MP3Player(/var/lib/asterisk/playlist.m3u) User can exit by pressing any key on the dialpad, or by hanging up.

This application does not automatically answer and should be preceded by an application such as Answer() or Progress().

## Syntax

MP3Player(Location)

### Arguments

Location - Location of the file to be played. (argument passed to mpg123)

## See Also

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r336877.

## Application\_MSet

MSet()

Synopsis

Set channel variable(s) or function value(s).

#### Description

This function can be used to set the value of channel variables or dialplan functions. When setting variables, if the variable name is prefixed with {}, the variable will be inherited into channels created from the current channel If the variable name is prefixed with \_, the variable will be inherited into channels created from the current channel and all children channels. MSet behaves in a similar fashion to the way Set worked in 1.2/1.4 and is thus prone to doing things that you may not expect. For example, it strips surrounding double-quotes from the right-hand side (value). If you need to put a separator character (comma or vert-bar), you will need to escape them by inserting a backslash before them. Avoid its use if possible.

## **Syntax**

```
MSet(name1value1[,name2value2[,...]])
```

### Arguments

- set1
   name1
   value1
   set2
  - name2value2

## See Also

# Application\_Set

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_MusicOnHold

MusicOnHold()

Synopsis

Play Music On Hold indefinitely.

Description

Plays hold music specified by class. If omitted, the default music source for the channel will be used. Change the default class with Set(CHANNEL(musicclass)=...). If duration is given, hold music will be played specified number of seconds. If duration is ommitted, music plays indefinitely. Returns 0 when done, -1 on hangup.

This application does not automatically answer and should be preceded by an application such as Answer() or Progress().

## **Syntax**

```
MusicOnHold(class[,duration])
```

#### Arguments

- class
   duration
- See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r336877.

# Application\_NBScat

NBScat()

Synopsis

Play an NBS local stream.

## Description

Executes nbscat to listen to the local NBS stream. User can exit by pressing any key.

## **Syntax**

```
NBScat()
```

Arguments

See Also

**Import Version** 

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Application NoCDR**

## NoCDR()

### Synopsis

Tell Asterisk to not maintain a CDR for the current call

## Description

This application will tell Asterisk not to maintain a CDR for the current call.

### Syntax

```
NoCDR()
```

#### Arguments

### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_NoOp

## NoOp()

### Synopsis

Do Nothing (No Operation).

# Description

This application does nothing. However, it is useful for debugging purposes.

This method can be used to see the evaluations of variables or functions without having any effect.

## **Syntax**

```
NoOp([text])
```

## Arguments

• text - Any text provided can be viewed at the Asterisk CLI.

### See Also

# Application\_ODBC\_Commit

## ODBC\_Commit()

Synopsis

Commits a currently open database transaction.

## Description

Commits the database transaction specified by *transaction ID* or the current active transaction, if not specified.

### Syntax

```
ODBC_Commit([transaction ID])
```

#### Arguments

• transaction ID

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ODBC\_Rollback

# ODBC\_Rollback()

## Synopsis

Rollback a currently open database transaction.

## Description

Rolls back the database transaction specified by *transaction ID* or the current active transaction, if not specified.

#### Syntax

```
ODBC_Rollback([transaction ID])
```

#### Arguments

• transaction ID

## See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_ODBCFinish

# ODBCFinish()

## Synopsis

Clear the resultset of a sucessful multirow query.

## Description

For queries which are marked as mode=multirow, this will clear any remaining rows of the specified resultset.

### Syntax

ODBCFinish(result-id)

### Arguments

• result-id

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Originate

### Originate()

Synopsis

Originate a call.

## Description

This application originates an outbound call and connects it to a specified extension or application. This application will block until the outgoing call fails or gets answered. At that point, this application will exit with the status variable set and dialplan processing will continue.

This application sets the following channel variable before exiting:

- ORIGINATE\_STATUS This indicates the result of the call origination.
  - FAILED
  - SUCCESS
  - BUSY
  - CONGESTION

- HANGUP
- RINGING
- . UNKNOWN In practice, you should never see this value. Please report it to the issue tracker if you ever see it.

#### Syntax

```
Originate(tech_data,type,arg1[,arg2[,arg3]])
```

#### Arguments

- tech\_data Channel technology and data for creating the outbound channel. For example, SIP/1234.
- type This should be app or exten, depending on whether the outbound channel should be connected to an application or extension.
- arg1 If the type is app, then this is the application name. If the type is exten, then this is the context that the channel will be sent to.
- arg2 If the type is app, then this is the data passed as arguments to the application. If the type is exten, then this is the extension that the channel will be sent to.
- arg3 If the type is exten, then this is the priority that the channel is sent to. If the type is app, then this parameter is ignored.

## Application\_OSPAuth

## OSPAuth()

Synopsis

OSP Authentication.

#### Description

Authenticate a call by OSP.

## Input variables:

- OSPINPEERIP The last hop IP address.
- OSPINTOKEN The inbound OSP token.

## Output variables:

- OSPINHANDLE The inbound call OSP transaction handle.
- OSPINTIMELIMIT The inbound call duration limit in seconds.

# This application sets the following channel variable upon completion:

- OSPAUTHSTATUS The status of OSPAuth attempt as a text string, one of
  - SUCCESS
  - FAILED
  - ERROR

## **Syntax**

OSPAuth([provider[,options]])

#### Arguments

- provider The name of the provider that authenticates the call.
- options Reserverd.

## OSPLookup()

## Synopsis

Lookup destination by OSP.

### Description

Looks up destination via OSP.

## Input variables:

- OSPINACTUALSRC The actual source device IP address in indirect mode.
- OSPINPEERIP The last hop IP address.
- OSPINHANDLE The inbound call OSP transaction handle.
- OSPINTIMELIMIT The inbound call duration limit in seconds.
- OSPINNETWORKID The inbound source network ID.
- OSPINNPRN The inbound routing number.
- OSPINNPCIC The inbound carrier identification code.
- OSPINNPDI The inbound number portability database dip indicator.
- OSPINSPID The inbound service provider identity.
- OSPINOCN The inbound operator company number.
- OSPINSPN The inbound service provider name.
- OSPINALTSPN The inbound alternate service provider name.
- OSPINMCC The inbound mobile country code.
- OSPINMNC The inbound mobile network code.
- OSPINTOHOST The inbound To header host part.
- OSPINDIVUSER The inbound Diversion header user part.
- OSPINDIVHOST The inbound Diversion header host part.
- OSPINCUSTOMINFOn The inbound custom information, where n is the index beginning with 1 upto 8.

# Output variables:

- OSPOUTHANDLE The outbound call OSP transaction handle.
- OSPOUTTECH The outbound channel technology for the call.
- OSPDESTINATION The outbound destination IP address.
- OSPOUTCALLING The outbound calling number.
- OSPOUTCALLED The outbound called number.
- OSPOUTNETWORKID The outbound destination network ID.
- OSPOUTNPRN The outbound routing number.
- OSPOUTNPCIC The outbound carrier identification code.
- OSPOUTNPDI The outbound number portability database dip indicator.
- OSPOUTSPID The outbound service provider identity.
- OSPOUTOCN The outbound operator company number.
- OSPOUTSPN The outbound service provider name.
- OSPOUTALTSPN The outbound alternate service provider name.
- OSPOUTMCC The outbound mobile country code.
- OSPOUTMNC The outbound mobile network code.
- OSPOUTTOKEN The outbound OSP token.
- OSPDESTREMAILS The number of remained destinations.
- OSPOUTTIMELIMIT The outbound call duration limit in seconds.

- OSPOUTCALLIDTYPES The outbound Call-ID types.
- OSPOUTCALLID The outbound Call-ID. Only for H.323.
- OSPDIALSTR The outbound Dial command string.

## This application sets the following channel variable upon completion:

- OSPLOOKUPSTATUS The status of OSPLookup attempt as a text string, one of
  - SUCCESS
  - FAILED
  - ERROR

## **Syntax**

```
OSPLookup(exten[,provider[,options]])
```

### Arguments

- exten The exten of the call.
- provider The name of the provider that is used to route the call.
- options
  - h generate H323 call id for the outbound call
  - s generate SIP call id for the outbound call. Have not been implemented
  - i generate IAX call id for the outbound call. Have not been implemented

## Application\_Page

## Page()

## Synopsis

Page series of phones

## Description

Places outbound calls to the given *technology / resource* and dumps them into a conference bridge as muted participants. The original caller is dumped into the conference as a speaker and the room is destroyed when the original callers leaves.

## Syntax

Page(Technology/Resource[&Technology2/Resource2[&...]][,options[,timed

#### Arguments

- Technology/Resource
  - Technology/Resource Specification of the device(s) to dial. These must be in the format of Technology/Resource,
    where Technology represents a particular channel driver, and Resource represents a resource available to that particular
    channel driver.
  - Technology2/Resource2 Optional extra devices to dial inparallel If you need more then one enter them as Technology2/Resource2& Technology3/Resourse3&.....
- options
  - d Full duplex audio
  - i Ignore attempts to forward the call
  - q Quiet, do not play beep to caller
  - r Record the page into a file (meetme option r)
  - s Only dial a channel if its device state says that it is NOT\_INUSE
  - A Play an announcement simultaneously to all paged participants
    - x The announcement to playback in all devices
  - n Do not play simultaneous announcement to caller (implies A )
- timeout Specify the length of time that the system will attempt to connect a call. After this duration, any intercom calls that have not been answered will be hung up by the system.

## Application\_Park

## Park()

## **Synopsis**

Park yourself.

#### Description

Used to park yourself (typically in combination with a supervised transfer to know the parking space).

If you set the If you set the None - PARKINGEXTEN variable to a parking space extension in the parking lot, Park() will attempt to park the call on that extension. If the extension is already is in use then execution will continue at the next priority.

If the parkeddynamic option is enabled in features.conf the following variables can be used to dynamically create new parking lots.

If you set the If you set the None - PARKINGDYNAMIC variable and this parking lot exists then it will be used as a template for the newly created dynamic lot. Otherwise, the default parking lot will be used.

If you set the If you set the None - PARKINGDYNCONTEXT variable then the newly created dynamic parking lot will use this context.

If you set the If you set the None - PARKINGDYNEXTEN variable then the newly created dynamic parking lot will use this extension to access the parking lot.

If you set the If you set the <code>None</code> - <code>PARKINGDYNPOS</code> variable then the newly created dynamic parking lot will use those parking postitions.

This application must be used as the first extension priority to be recognized as a parking access extension. DTMF transfers and some channel drivers need this distinction to operate properly. The parking access extension in this case is treated like a dialplan hint. This application must be used as the first extension priority to be recognized as a parking access extension. DTMF transfers and some channel drivers need this distinction to operate properly. The parking access extension in this case is treated like a dialplan hint.

Parking lots automatically create and manage dialplan extensions in the parking lot context. You do not need to explicitly use this application in your dialplan. Instead, all you should do is include the parking lot context in your dialplan. Parking lots automatically create and manage dialplan extensions in the parking lot context. You do not need to explicitly use this application in your dialplan. Instead, all you should do is include the parking lot context in your dialplan.

#### Syntax

Park([timeout[,return\_context[,return\_exten[,return\_priority[,options

#### Arguments

- timeout A custom parking timeout for this parked call. Value in milliseconds.
- return\_context The context to return the call to after it times out.
- return\_exten The extension to return the call to after it times out.
- return\_priority The priority to return the call to after it times out.
- options A list of options for this parked call.
  - r Send ringing instead of MOH to the parked call.
  - R Randomize the selection of a parking space.
  - s Silence announcement of the parking space number.
- parking\_lot\_name Specify in which parking lot to park a call. The parking lot used is selected in the following order: 1) parking\_lot\_name option 2) PARKINGLOT variable 3) CHANNEL(parkinglot) function (Possibly preset by the channel driver.) 4) Default parking lot.

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r332176.

## Application\_ParkAndAnnounce

## ParkAndAnnounce()

#### Synopsis

Park and Announce.

## Description

Park a call into the parkinglot and announce the call to another channel.

The variable The variable None - PARKEDAT will contain the parking extension into which the call was placed. Use with the Local channel to allow the dialplan to make use of this information.

#### **Syntax**

```
ParkAndAnnounce(announce[:announce1[:...]],timeout,dial[,return_context
```

#### Arguments

- announce\_template
  - announce Colon-separated list of files to announce. The word PARKED will be replaced by a say\_digits of the extension in which the call is parked.
  - announce1
- timeout Time in seconds before the call returns into the return context.
- dial The app\_dial style resource to call to make the announcement. Console/dsp calls the console.
- return\_context The goto-style label to jump the call back into after timeout. Default priority+1.

## Application\_ParkedCall

ParkedCall()

Synopsis

Retrieve a parked call.

### Description

Used to retrieve a parked call from a parking lot.

Parking lots automatically create and manage dialplan extensions in the parking lot context. You do not need to explicitly use this application in your dialplan. Instead, all you should do is include the parking lot context in your dialplan. Parking lots automatically create and manage dialplan extensions in the parking lot context. You do not need to explicitly use this application in your dialplan. Instead, all you should do is include the parking lot context in your dialplan.

### Syntax

```
ParkedCall([exten[,parking_lot_name]])
```

### Arguments

- exten Parking space extension to retrieve a parked call. If not provided then the first available parked call in the parking lot will be retrieved.
- parking\_lot\_name Specify from which parking lot to retrieve a parked call. The parking lot used is selected in the following order: 1)
  parking\_lot\_name option 2) PARKINGLOT variable 3) CHANNEL(parkinglot) function (Possibly preset by the channel driver.) 4)
  Default parking lot.

## Application\_PauseMonitor

## PauseMonitor()

Synopsis

Pause monitoring of a channel.

### Description

Pauses monitoring of a channel until it is re-enabled by a call to UnpauseMonitor.

### **Syntax**

PauseMonitor()

Arguments

See Also

Application\_UnpauseMonitor

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_PauseQueueMember

## PauseQueueMember()

Synopsis

Pauses a queue member.

#### Description

Pauses (blocks calls for) a queue member. The given interface will be paused in the given queue. This prevents any calls from being sent from the queue to the interface until it is unpaused with UnpauseQueueMember or the manager interface. If no queuename is given, the interface is paused in every queue it is a member of. The application will fail if the interface is not found.

This application sets the following channel variable upon completion:

- POMSTATUS The status of the attempt to pause a queue member as a text string.
  - PAUSED
  - NOTFOUND

Example: PauseQueueMember(,SIP/3000)

#### **Syntax**

PauseQueueMember([queuename,interface[,options[,reason]]])

### Arguments

- queuename
- interface
- options
- reason Is used to add extra information to the appropriate queue\_log entries and manager events.

## Application\_Pickup

## Pickup()

### Synopsis

Directed extension call pickup.

## Description

This application can pickup any ringing channel that is calling the specified *extension*. If no *context* is specified, the current context will be used. If you use the special string PICKUPMARK for the context parameter, for example 10@PICKUPMARK, this application tries to find a channel which has defined a This application can pickup any ringing channel that is calling the specified None - PICKUPMARK channel variable with the same value as *extension* (in this example, 10). When no parameter is specified, the application will pickup a channel matching the pickup group of the active channel.

## **Syntax**

```
Pickup(extension[@context][&extension2[@context2][&...]])
```

#### **Arguments**

- ext
- $\bullet$  extension
- context
- ext2
  - extension2
  - context2

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_PickupChan

## PickupChan()

#### Synopsis

Pickup a ringing channel.

### Description

This will pickup a specified channel if ringing.

### Syntax

```
{\tt PickupChan(Technology/Resource[\&Technology2/Resource2[\&...]][,options]}
```

#### Arguments

- Technology/Resource
  - Technology/Resource
  - Technology2/Resource2
- options
  - p Channel name specified partial name. Used when find channel by callid.

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r329203.

## Application\_Playback

### Playback()

Synopsis

Play a file.

## Description

Plays back given filenames (do not put extension of wav/alaw etc). The playback command answer the channel if no options are specified. If the file is non-existant it will fail

This application sets the following channel variable upon completion:

- PLAYBACKSTATUS The status of the playback attempt as a text string.
  - SUCCESS
  - FAILED

See Also: Background (application) – for playing sound files that are interruptible

WaitExten (application) – wait for digits from caller, optionally play music on hold

### **Syntax**

```
Playback(filename[&filename2[&...]][,options])
```

## Arguments

- filenames
  - filename
  - filename2
- options Comma separated list of options
  - skip Do not play if not answered
  - noanswer Playback without answering, otherwise the channel will be answered before the sound is played. Not all channel types support playing messages while still on hook. Not all channel types support playing messages while still on hook.

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_PlayTones

## PlayTones()

Synopsis

Play a tone list.

## Description

Plays a tone list. Execution will continue with the next step in the dialplan immediately while the tones continue to play.

See the sample indications.conf for a description of the specification of a tonelist.

### Syntax

PlayTones(arg)

#### Arguments

 arg - Arg is either the tone name defined in the indications.conf configuration file, or a directly specified list of frequencies and durations.

#### See Also

## Application\_StopPlayTones

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_PrivacyManager

## PrivacyManager()

### Synopsis

Require phone number to be entered, if no CallerID sent

### Description

If no Caller\*ID is sent, PrivacyManager answers the channel and asks the caller to enter their phone number. The caller is given *maxretries* attempts to do so. The application does **nothing** if Caller\*ID was received on the channel.

The application sets the following channel variable upon completion:

- PRIVACYMGRSTATUS The status of the privacy manager's attempt to collect a phone number from the user.
  - SUCCESS
  - FAILED

### **Syntax**

PrivacyManager([maxretries[,minlength[,options[,context]]]])

### Arguments

- maxretries Total tries caller is allowed to input a callerid. Defaults to 3.
- minlength Minimum allowable digits in the input callerid number. Defaults to 10.
- options Position reserved for options.
- context Context to check the given callerid against patterns.

#### See Also

## Application\_Zapateller

## Import Version

## Application\_Proceeding

## Proceeding()

Synopsis

Indicate proceeding.

### Description

This application will request that a proceeding message be provided to the calling channel.

## **Syntax**

Proceeding()

Arguments

See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Progress

## Progress()

Synopsis

Indicate progress.

## Description

This application will request that in-band progress information be provided to the calling channel.

### Syntax

```
Progress()
```

Arguments

See Also

Application\_Busy
Application\_Congestion
Application\_Ringing
Application\_PlayTones

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Queue

Queue()

Synopsis

Queue a call for a call queue.

### Description

In addition to transferring the call, a call may be parked and then picked up by another user.

This application will return to the dialplan if the queue does not exist, or any of the join options cause the caller to not enter the queue.

This application does not automatically answer and should be preceded by an application such as Answer(), Progress(), or Ringing().

This application sets the following channel variable upon completion:

- QUEUESTATUS The status of the call as a text string.
  - TIMEOUT
  - FULL
  - JOINEMPTY
  - LEAVEEMPTY
  - JOINUNAVAIL
  - LEAVEUNAVAIL
  - CONTINUE

## Syntax

Queue(queuename[,options[,URL[,announceoverride[,timeout[,AGI[,macro[

#### Arguments

- queuename
- options
  - C Mark all calls as "answered elsewhere" when cancelled.
  - c Continue in the dialplan if the callee hangs up.
  - d data-quality (modem) call (minimum delay).
  - h Allow callee to hang up by pressing \*.
  - H Allow caller to hang up by pressing \*.
  - n No retries on the timeout; will exit this application and go to the next step.
  - i Ignore call forward requests from gueue members and do nothing when they are requested.
  - I Asterisk will ignore any connected line update requests or any redirecting party update requests it may receive on this dial attempt.
  - r Ring instead of playing MOH. Periodic Announcements are still made, if applicable.
  - R Ring instead of playing MOH when a member channel is actually ringing.
  - t Allow the called user to transfer the calling user.
  - T Allow the calling user to transfer the call.
  - w Allow the **called** user to write the conversation to disk via Monitor.
  - w Allow the calling user to write the conversation to disk via Monitor.
  - k Allow the called party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
  - K Allow the calling party to enable parking of the call by sending the DTMF sequence defined for call parking in features.conf.
  - x Allow the **called** user to write the conversation to disk via MixMonitor.
  - x Allow the calling user to write the conversation to disk via MixMonitor.
- URL URL will be sent to the called party if the channel supports it.
- announceoverride
- timeout Will cause the queue to fail out after a specified number of seconds, checked between each queues.conf timeout and retry
  cycle.
- AGI Will setup an AGI script to be executed on the calling party's channel once they are connected to a queue member.
- macro Will run a macro on the calling party's channel once they are connected to a queue member.
- gosub Will run a gosub on the calling party's channel once they are connected to a queue member.
- rule Will cause the queue's defaultrule to be overridden by the rule specified.
- position Attempt to enter the caller into the queue at the numerical position specified. 1 would attempt to enter the caller at the head of the queue, and 3 would attempt to place the caller third in the queue.

## **Application QueueLog**

## QueueLog()

### Synopsis

Writes to the queue\_log file.

## Description

Allows you to write your own events into the queue log.

Example: QueueLog(101,\${UNIQUEID},\${AGENT},WENTONBREAK,600)

#### Syntax

QueueLog(queuename,uniqueid,agent,event[,additionalinfo])

#### Arguments

- queuename
- uniqueid
- agent
- event
- $^{ullet}$  additionalinfo

## Application\_RaiseException

## RaiseException()

## **Synopsis**

Handle an exceptional condition.

## Description

This application will jump to the e extension in the current context, setting the dialplan function EXCEPTION(). If the e extension does not exist, the call will hangup.

### **Syntax**

RaiseException(reason)

## Arguments

• reason

#### See Also

## Function\_EXCEPTION

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Read

## Read()

Synopsis

Read a variable.

## Description

Reads a #-terminated string of digits a certain number of times from the user in to the given *variable*.

This application sets the following channel variable upon completion:

- READSTATUS This is the status of the read operation.
  - OK
  - ERROR
  - HANGUP
  - INTERRUPTED
  - SKIPPED
  - TIMEOUT

## **Syntax**

Read(variable[,filename[&filename2[&...]][,maxdigits[,options[,attempt

## Arguments

- variable The input digits will be stored in the given *variable* name.
- filenames
  - filename file(s) to play before reading digits or tone with option i
  - filename2
- maxdigits Maximum acceptable number of digits. Stops reading after maxdigits have been entered (without requiring the user to
  press the # key). Defaults to 0 no limit wait for the user press the # key. Any value below 0 means the same. Max accepted value is

255.

- options
  - s to return immediately if the line is not up.
  - i to play filename as an indication tone from your indications.conf.
  - n to read digits even if the line is not up.
- attempts If greater than 1, that many attempts will be made in the event no data is entered.
- timeout The number of seconds to wait for a digit response. If greater than 0, that value will override the default timeout. Can be floating point.

#### See Also

## Application\_SendDTMF

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_ReadExten

## ReadExten()

### Synopsis

Read an extension into a variable.

## Description

Reads a # terminated string of digits from the user into the given variable.

Will set READEXTENSTATUS on exit with one of the following statuses:

- READEXTENSTATUS -
  - OK A valid extension exists in \${variable}.
  - TIMEOUT No extension was entered in the specified time. Also sets \${variable} to "t".
  - INVALID An invalid extension, \${INVALID\_EXTEN}, was entered. Also sets \${variable} to "i".
  - SKIP Line was not up and the option 's' was specified.
  - ERROR Invalid arguments were passed.

## Syntax

ReadExten(variable[,filename[,context[,option[,timeout]]]])

## Arguments

- variable
- ${}^{\bullet}\,$  filename File to play before reading digits or tone with option i
- context Context in which to match extensions.
- option
  - s Return immediately if the channel is not answered.
  - i Play filename as an indication tone from your indications.conf or a directly specified list of frequencies and durations.
  - n Read digits even if the channel is not answered.
- timeout An integer number of seconds to wait for a digit response. If greater than 0, that value will override the default timeout.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_ReadFile

ReadFile()

Synopsis

Read the contents of a text file into a channel variable.

Description

Read the contents of a text file into channel variable *varname* 

ReadFile has been deprecated in favor of Set(varname=\${FILE(file,0,length)})

## **Syntax**

```
ReadFile(varname=file[,length])
```

#### Arguments

- varname Result stored here.
- fileparams
  - file The name of the file to read.
  - length Maximum number of characters to capture. If not specified defaults to max.

#### See Also

Application\_System Application\_Read

Import Version

## Application\_ReceiveFax

ReceiveFax()

Synopsis

Receive a FAX and save as a TIFF/F file.

### Description

This application is provided by res\_fax, which is a FAX technology agnostic module that utilizes FAX technology resource modules to complete a FAX transmission.

Session arguments can be set by the FAXOPT function and to check results of the ReceiveFax() application.

#### Syntax

ReceiveFax(filename[,options])

## Arguments

- filename
- options
  - d Enable FAX debugging.
  - f Allow audio fallback FAX transfer on T.38 capable channels.
  - s Send progress Manager events (overrides statusevents setting in res\_fax.conf).

#### See Also

## Function\_FAXOPT

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

## Application\_ReceiveFAX (app\_fax)

## ReceiveFAX()

Synopsis

Receive a Fax

## Description

Receives a FAX from the channel into the given filename overwriting the file if it already exists.

File created will be in TIFF format.

This application sets the following channel variables:

- LOCALSTATIONID To identify itself to the remote end
- LOCALHEADERINFO To generate a header line on each page
- FAXSTATUS -
  - SUCCESS
  - FAILED
- FAXERROR Cause of failure
- $\bullet$  REMOTESTATIONID The CSID of the remote side
- FAXPAGES Number of pages sent
- FAXBITRATE Transmission rate
- FAXRESOLUTION Resolution of sent fax

#### **Syntax**

ReceiveFAX(filename[,c])

#### Arguments

- filename Filename of TIFF file save incoming fax
- c Makes the application behave as the calling machine (Default behavior is as answering machine)

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

## Application\_ReceiveFax (res\_fax)

## ReceiveFax()

Synopsis

Receive a FAX and save as a TIFF/F file.

### Description

This application is provided by res\_fax, which is a FAX technology agnostic module that utilizes FAX technology resource modules to complete a FAX transmission.

Session arguments can be set by the FAXOPT function and to check results of the ReceiveFax() application.

## Syntax

ReceiveFax(filename[,options])

#### Arguments

- filename
- options
  - d Enable FAX debugging.
  - f Allow audio fallback FAX transfer on T.38 capable channels.
  - s Send progress Manager events (overrides statusevents setting in res\_fax.conf).

## See Also

## **Function FAXOPT**

## Application\_Record

Record()

Synopsis

Record to a file.

## Description

If filename contains %d, these characters will be replaced with a number incremented by one each time the file is recorded. Use core show file formats to see the available formats on your system User can press # to terminate the recording and continue to the next priority. If the user hangs up during a recording, all data will be lost and the application will terminate.

- RECORDED FILE Will be set to the final filename of the recording.
- RECORD\_STATUS This is the final status of the command
  - DTMF A terminating DTMF was received ('#' or '\*', depending upon option 't')
  - SILENCE The maximum silence occurred in the recording.
  - SKIP The line was not yet answered and the 's' option was specified.
  - TIMEOUT The maximum length was reached.
  - HANGUP The channel was hung up.
  - ERROR An unrecoverable error occurred, which resulted in a WARNING to the logs.

#### Syntax

Record(filenameformat[,silence[,maxduration[,options]]])

#### Arguments

- filename
  - filename
  - format Is the format of the file type to be recorded (wav, gsm, etc).
- silence Is the number of seconds of silence to allow before returning.
- maxduration Is the maximum recording duration in seconds. If missing or 0 there is no maximum.
- options
  - a Append to existing recording rather than replacing.
  - n Do not answer, but record anyway if line not yet answered.
  - q quiet (do not play a beep tone).
  - s skip recording if the line is not yet answered.
  - t use alternate '\*' terminator key (DTMF) instead of default '#'
  - x Ignore all terminator keys (DTMF) and keep recording until hangup.
  - k Keep recorded file upon hangup.
  - y Terminate recording if any DTMF digit is received.

## Application\_RemoveQueueMember

## RemoveQueueMember()

## Synopsis

Dynamically removes queue members.

### Description

If the interface is **NOT** in the queue it will return an error.

This application sets the following channel variable upon completion:

- RQMSTATUS -
  - REMOVED

NOTINQUEUENOSUCHQUEUE

## Example: RemoveQueueMember(techsupport,SIP/3000)

## **Syntax**

RemoveQueueMember(queuename[,interface[,options]])

#### Arguments

- queuename
- interface
- options

## Application\_ResetCDR

## ResetCDR()

## Synopsis

Resets the Call Data Record.

## Description

This application causes the Call Data Record to be reset.

## Syntax

ResetCDR([options])

#### Arguments

- options
  - w Store the current CDR record before resetting it.
  - a Store any stacked records.
  - v Save CDR variables.
  - e Enable CDR only (negate effects of NoCDR).

#### See Also

Application\_ForkCDR Application\_NoCDR

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Application RetryDial**

## RetryDial()

#### Synopsis

Place a call, retrying on failure allowing an optional exit extension.

## Description

This application will attempt to place a call using the normal Dial application. If no channel can be reached, the *announce* file will be played. Then, it will wait *sleep* number of seconds before retrying the call. After *retries* number of attempts, the calling channel will continue at the next priority in the dialplan. If the *retries* setting is set to 0, this application will retry endlessly. While waiting to retry a call, a 1 digit extension may be dialed. If that extension exists in either the context defined in This application will attempt to place a call using the normal Dial application. If no channel can be reached, the None - EXITCONTEXT or the current one, The call will jump to that extension immediately. The *dialargs* are specified in the same format that arguments are provided to the Dial application.

## Syntax

RetryDial(announce, sleep, retries, dialargs)

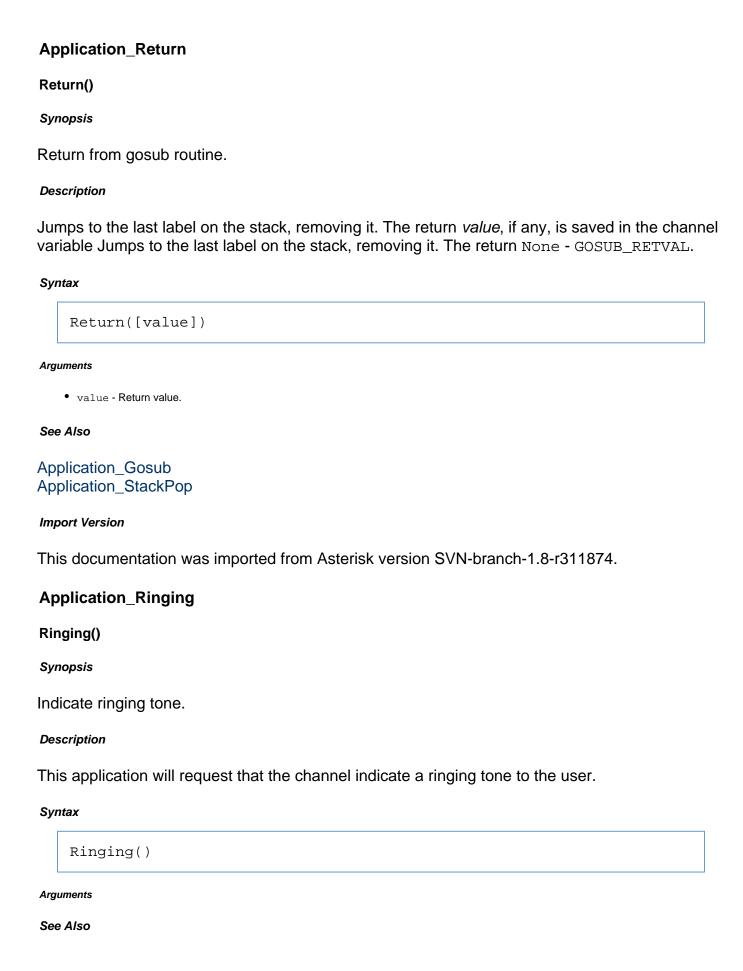

## Arguments

- announce Filename of sound that will be played when no channel can be reached
- sleep Number of seconds to wait after a dial attempt failed before a new attempt is made
- retries Number of retries When this is reached flow will continue at the next priority in the dialplan
- dialargs Same format as arguments provided to the Dial application

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SayCountedAdj

SayCountedAdj()

Synopsis

Say a adjective in declined form in order to count things

Description

Selects and plays the proper form of an adjective according to the gender and of the noun which it modifies and the number of objects named by the noun-verb combination which have been counted. Used when saying things such as "5 new messages". The various singular and plural forms of the adjective are selected by adding suffixes to *filename*.

If the channel language is English, then no suffix will ever be added (since, in English, adjectives are not declined). If the channel language is Russian or some other slavic language, then the suffix will the specified *gender* for nominative, and "x" for genative plural. (The genative singular is not used when counting things.) For example, SayCountedAdj(1,new,f) will play sound file "newa" (containing the word "novaya"), but SayCountedAdj(5,new,f) will play sound file "newx" (containing the word "novikh").

This application does not automatically answer and should be preceded by an application such as Answer(), Progress(), or Proceeding().

#### Syntax

```
SayCountedAdj(number,filename[,gender])
```

### Arguments

- number The number of things
- filename File name stem for the adjective
- gender The gender of the noun modified, one of 'm', 'f', 'n', or 'c'

## SayCountedNoun()

### Synopsis

Say a noun in declined form in order to count things

## Description

Selects and plays the proper singular or plural form of a noun when saying things such as "five calls". English has simple rules for deciding when to say "call" and when to say "calls", but other languages have complicated rules which would be extremely difficult to implement in the Asterisk dialplan language.

The correct sound file is selected by examining the *number* and adding the appropriate suffix to *filename*. If the channel language is English, then the suffix will be either empty or "s". If the

channel language is Russian or some other Slavic language, then the suffix will be empty for nominative, "x1" for genative singular, and "x2" for genative plural.

Note that combining *filename* with a suffix will not necessarily produce a correctly spelled plural form. For example, SayCountedNoun(2,man) will play the sound file "mans" rather than "men". This behavior is intentional. Since the file name is never seen by the end user, there is no need to implement complicated spelling rules. We simply record the word "men" in the sound file named "mans".

This application does not automatically answer and should be preceded by an application such as Answer() or Progress.

### Syntax

SayCountedNoun(number,filename)

### Arguments

- number The number of things
- filename File name stem for the noun that is the the name of the things

#### See Also

Application\_SayCountedAdj Application SayNumber

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r336877.

## Application\_SayCountPL

SayCountPL()

Synopsis

Say Polish counting words.

### Description

Polish grammar has some funny rules for counting words. for example 1 zloty, 2 zlote, 5 zlotych. This application will take the words for 1, 2-4 and 5 and decide based on grammar rules which one to use with the number you pass to it.

Example: SayCountPL(zloty,zlote,zlotych,122) will give: zlote

### Syntax

SayCountPL(word1, word2, word5, number)

#### Arguments

- word1
- word2
- word5number

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SayDigits

SayDigits()

Synopsis

Say Digits.

## Description

This application will play the sounds that correspond to the digits of the given number. This will use the language that is currently set for the channel.

## Syntax

SayDigits(digits)

### Arguments

• digits

### See Also

Application\_SayAlpha Application\_SayNumber Application\_SayPhonetic Function\_CHANNEL

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SayNumber

SayNumber()

Synopsis

Say Number.

#### Description

This application will play the sounds that correspond to the given *digits*. Optionally, a *gender* may be specified. This will use the language that is currently set for the channel. See the LANGUAGE() function for more information on setting the language for the channel.

### Syntax

```
SayNumber(digits[,gender])
```

### Arguments

- digits
- gender

#### See Also

Application\_SayAlpha Application\_SayDigits Application\_SayPhonetic Function\_CHANNEL

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SayPhonetic

## SayPhonetic()

### Synopsis

Say Phonetic.

### Description

This application will play the sounds from the phonetic alphabet that correspond to the letters in the given *string*.

## Syntax

```
SayPhonetic(string)
```

#### Arguments

• string

## See Also

## Application\_SayAlpha

# Application\_SayDigits Application\_SayNumber

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SayUnixTime

## SayUnixTime()

## Synopsis

Says a specified time in a custom format.

### Description

Uses some of the sound files stored in  $\sqrt{\sqrt{\frac{1}{b}}}$  is  $\sqrt{\frac{1}{b}}$  sounds to construct a phrase saying the specified date and/or time in the specified format.

### Syntax

```
SayUnixTime([unixtime[,timezone[,format]]])
```

#### Arguments

- unixtime time, in seconds since Jan 1, 1970. May be negative. Defaults to now.
- timezone timezone, see /usr/share/zoneinfo for a list. Defaults to machine default.
- format a format the time is to be said in. See voicemail.conf. Defaults to ABdY "digits/at" IMp

## Application\_SendDTMF

## SendDTMF()

## Synopsis

Sends arbitrary DTMF digits

## Description

DTMF digits sent to a channel with half second pause

It will pass all digits or terminate if it encounters an error.

#### Syntax

```
SendDTMF(digits[,timeout_ms[,duration_ms[,channel]]])
```

#### Arguments

- digits List of digits 0-9,\*#,abcd
- timeout\_ms Amount of time to wait in ms between tones. (defaults to.25s)
- duration\_ms Duration of each digit
- channel Channel where digits will be played

## Application\_Read

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SendFax

## SendFax()

#### Synopsis

Sends a specified TIFF/F file as a FAX.

### Description

This application is provided by res\_fax, which is a FAX technology agnostic module that utilizes FAX technology resource modules to complete a FAX transmission.

Session arguments can be set by the FAXOPT function and to check results of the SendFax() application.

## Syntax

```
SendFax([filename2[&...]][,options])
```

## Arguments

- filename
  - filename2 TIFF file to send as a FAX.
- options
  - d Enable FAX debugging.
  - f Allow audio fallback FAX transfer on T.38 capable channels.
  - s Send progress Manager events (overrides statusevents setting in res\_fax.conf).
  - z Initiate a T.38 reinvite on the channel if the remote end does not.

## See Also

## Function\_FAXOPT

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

## Application\_SendFAX (app\_fax)

SendFAX()

Synopsis

Send a Fax

### Description

Send a given TIFF file to the channel as a FAX.

This application sets the following channel variables:

- LOCALSTATIONID To identify itself to the remote end
- LOCALHEADERINFO To generate a header line on each page
- FAXSTATUS -
  - SUCCESS
  - FAILED
- FAXERROR Cause of failure
- REMOTESTATIONID The CSID of the remote side
- FAXPAGES Number of pages sent
- FAXBITRATE Transmission rate
- FAXRESOLUTION Resolution of sent fax

#### Syntax

SendFAX(filename[,a])

#### Arguments

- filename Filename of TIFF file to fax
- a Makes the application behave as the answering machine (Default behavior is as calling machine)

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

## Application\_SendFax (res\_fax)

SendFax()

### Synopsis

Sends a specified TIFF/F file as a FAX.

#### Description

This application is provided by res\_fax, which is a FAX technology agnostic module that utilizes FAX technology resource modules to complete a FAX transmission.

Session arguments can be set by the FAXOPT function and to check results of the SendFax() application.

### **Syntax**

```
SendFax([filename2[&...]][,options])
```

#### Arguments

- filename
  - filename2 TIFF file to send as a FAX.
- options
  - d Enable FAX debugging.
  - f Allow audio fallback FAX transfer on T.38 capable channels.
  - s Send progress Manager events (overrides statusevents setting in res\_fax.conf).
  - z Initiate a T.38 reinvite on the channel if the remote end does not.

## Function\_FAXOPT

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r312509.

## Application\_SendImage

## SendImage()

## Synopsis

Sends an image file.

## Description

Send an image file on a channel supporting it.

Result of transmission will be stored in Result of transmission will be stored in None - SENDIMAGESTATUS

- SENDIMAGESTATUS -
  - SUCCESS Transmission succeeded.
  - FAILURE Transmission failed.
  - UNSUPPORTED Image transmission not supported by channel.

## Syntax

SendImage(filename)

## Arguments

• filename - Path of the filename (image) to send.

## See Also

Application\_SendText Application SendURL

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SendText

## SendText()

Synopsis

Send a Text Message.

### Description

Sends *text* to current channel (callee).

Result of transmission will be stored in the Result of transmission will be stored in the <code>None-SENDTEXTSTATUS</code>

- SENDTEXTSTATUS -
  - SUCCESS Transmission succeeded.
  - FAILURE Transmission failed.
  - UNSUPPORTED Text transmission not supported by channel.

At this moment, text is supposed to be 7 bit ASCII in most channels. At this moment, text is supposed to be 7 bit ASCII in most channels.

## **Syntax**

SendText(text)

## Arguments

• text

### See Also

Application\_SendImage Application\_SendURL

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SendURL

SendURL()

Synopsis

Send a URL.

## Description

Requests client go to *URL* (IAX2) or sends the URL to the client (other channels).

Result is returned in the Result is returned in the None - SENDURLSTATUS channel variable:

- SENDURLSTATUS -
  - SUCCESS URL successfully sent to client.
  - FAILURE Failed to send URL.
  - NOLOAD Client failed to load URL (wait enabled).
  - UNSUPPORTED Channel does not support URL transport.

SendURL continues normally if the URL was sent correctly or if the channel does not support HTML transport. Otherwise, the channel is hung up.

## **Syntax**

SendURL(URL[,option])

#### Arguments

- URL
- option
  - w Execution will wait for an acknowledgement that the URL has been loaded before continuing.

#### See Also

Application\_SendImage Application\_SendText

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_Set

Set()

Synopsis

Set channel variable or function value.

### Description

This function can be used to set the value of channel variables or dialplan functions. When setting variables, if the variable name is prefixed with {}, the variable will be inherited into channels created from the current channel. If the variable name is prefixed with \_, the variable will be inherited into channels created from the current channel and all children channels.

If (and only if), in If (and only if), in /etc/asterisk/asterisk.conf, you have a compat category, and you have app\_set = 1.4 under that, then the behavior of this app changes, and strips surrounding quotes from the right hand side as it did previously in 1.4. The advantages of not stripping out quoting, and not caring about the separator characters (comma and vertical bar) were sufficient to make these changes in 1.6. Confusion about how many backslashes would be needed to properly protect separators and quotes in various database access strings has been greatly reduced by these changes.

### Syntax

Set(name, value)

#### Arguments

- $^{ullet}$  name
- value

#### See Also

Application\_MSet Function\_GLOBAL Function\_SET Function\_ENV

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r334234.

## Application\_SetAMAFlags

SetAMAFlags()

Synopsis

Set the AMA Flags.

#### Description

This application will set the channel's AMA Flags for billing purposes.

### Syntax

SetAMAFlags([flag])

#### Arguments

• flag

#### See Also

## Function\_CDR

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SetCallerPres

## SetCallerPres()

Synopsis

Set CallerID Presentation.

## Description

Set Caller\*ID presentation on a call.

### Syntax

SetCallerPres(presentation)

### Arguments

- presentation
  - allowed\_not\_screened Presentation Allowed, Not Screened.
  - allowed\_passed\_screen Presentation Allowed, Passed Screen.
  - allowed\_failed\_screen Presentation Allowed, Failed Screen.
  - allowed Presentation Allowed, Network Number.
  - prohib\_not\_screened Presentation Prohibited, Not Screened.
  - prohib\_passed\_screen Presentation Prohibited, Passed Screen.
  - prohib\_failed\_screen Presentation Prohibited, Failed Screen.
  - prohib Presentation Prohibited, Network Number.
  - unavailable Number Unavailable.

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SetMusicOnHold

## SetMusicOnHold()

## Synopsis

Set default Music On Hold class.

## Description

!!! DEPRECATED. USe Set(CHANNEL(musicclass)=...) instead !!!

Sets the default class for music on hold for a given channel. When music on hold is activated, this class will be used to select which music is played.

!!! DEPRECATED. USe Set(CHANNEL(musicclass)=...) instead !!!

### Syntax

SetMusicOnHold(class)

### Arguments

• class

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SIPAddHeader

## SIPAddHeader()

## Synopsis

Add a SIP header to the outbound call.

### Description

Adds a header to a SIP call placed with DIAL.

Remember to use the X-header if you are adding non-standard SIP headers, like X-Asterisk-Accountcode:. Use this with care. Adding the wrong headers may jeopardize the SIP dialog.

Always returns 0.

## Syntax

SIPAddHeader (Header, Content)

### Arguments

- Header
- Content

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SIPDtmfMode

## SIPDtmfMode()

### Synopsis

Change the dtmfmode for a SIP call.

#### Description

Changes the dtmfmode for a SIP call.

### **Syntax**

```
SIPDtmfMode(mode)
```

## Arguments

- mode
  - inband
  - info
  - rfc2833

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Application\_SIPRemoveHeader

## SIPRemoveHeader()

### Synopsis

Remove SIP headers previously added with SIPAddHeader

## Description

SIPRemoveHeader() allows you to remove headers which were previously added with SIPAddHeader(). If no parameter is supplied, all previously added headers will be removed. If a parameter is supplied, only the matching headers will be removed.

For example you have added these 2 headers:

SIPAddHeader(P-Asserted-Identity: sip:foo@bar);

```
SIPAddHeader(P-Preferred-Identity: sip:bar@foo);
// remove all headers
SIPRemoveHeader();
// remove all P- headers
SIPRemoveHeader(P-);
// remove only the PAI header (note the : at the end)
SIPRemoveHeader(P-Asserted-Identity );
Always returns 0.
Syntax
    SIPRemoveHeader([Header])
Arguments
   • Header

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SLAStation

# SLAStation()

### Synopsis

Shared Line Appearance Station.

# Description

This application should be executed by an SLA station. The argument depends on how the call was initiated. If the phone was just taken off hook, then the argument station should be just the station name. If the call was initiated by pressing a line key, then the station name should be preceded by an underscore and the trunk name associated with that line button.

# For example:

station1 line1

On exit, this application will set the variable On exit, this application will set the variable None -SLASTATION\_STATUS to one of the following values:

- SLASTATION\_STATUS -

  - FAILURE
     CONGESTION
  - SUCCESS

### Syntax

SLAStation(station)

### **Arauments**

station - Station name

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SLATrunk

### SLATrunk()

#### Synopsis

Shared Line Appearance Trunk.

### Description

This application should be executed by an SLA trunk on an inbound call. The channel calling this application should correspond to the SLA trunk with the name *trunk* that is being passed as an argument.

On exit, this application will set the variable On exit, this application will set the variable None - SLATRUNK\_STATUS to one of the following values:

- SLATRUNK\_STATUS -
  - FAILURE
  - SUCCESS
  - UNANSWERED
  - RINGTIMEOUT

### Syntax

```
SLATrunk(trunk[,options])
```

#### Arguments

- trunk Trunk name
- options
  - M Play back the specified MOH *class* instead of ringing
     class

# Application\_SMS

### SMS()

### Synopsis

Communicates with SMS service centres and SMS capable analogue phones.

### Description

SMS handles exchange of SMS data with a call to/from SMS capable phone or SMS PSTN service center. Can send and/or receive SMS messages. Works to ETSI ES 201 912; compatible with BT SMS PSTN service in UK and Telecom Italia in Italy.

Typical usage is to use to handle calls from the SMS service centre CLI, or to set up a call using

outgoing or manager interface to connect service centre to SMS().

"Messages are processed as per text file message queues. smsq (a separate software) is a command to generate message queues and send messages.

The protocol has tight delay bounds. Please use short frames and disable/keep short the jitter buffer on the ATA to make sure that respones (ACK etc.) are received in time. The protocol has tight delay bounds. Please use short frames and disable/keep short the jitter buffer on the ATA to make sure that respones (ACK etc.) are received in time.

### Syntax

```
SMS(name[,options[,addr[,body]]])
```

#### Arguments

- name The name of the queue used in /var/spool/asterisk/sms
- options
  - a Answer, i.e. send initial FSK packet.
  - s Act as service centre talking to a phone.
  - t Use protocol 2 (default used is protocol 1).
  - p Set the initial delay to N ms (default is 300). addr and body are a deprecated format to send messages out.
  - r Set the Status Report Request (SRR) bit.
  - o The body should be coded as octets not 7-bit symbols.
- addr
- body

# Application\_SoftHangup

# SoftHangup()

### Synopsis

Hangs up the requested channel.

### Description

Hangs up the requested channel. If there are no channels to hangup, the application will report it.

#### Syntax

```
SoftHangup(Technology/Resource[,options])
```

#### Arguments

- Technology/Resource
- options
  - · a Hang up all channels on a specified device instead of a single resource

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechActivateGrammar

### SpeechActivateGrammar()

Synopsis

Activate a grammar.

### Description

This activates the specified grammar to be recognized by the engine. A grammar tells the speech recognition engine what to recognize, and how to portray it back to you in the dialplan. The grammar name is the only argument to this application.

### Syntax

SpeechActivateGrammar(grammar\_name)

#### Arguments

• grammar\_name

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechBackground

# SpeechBackground()

### Synopsis

Play a sound file and wait for speech to be recognized.

# Description

This application plays a sound file and waits for the person to speak. Once they start speaking playback of the file stops, and silence is heard. Once they stop talking the processing sound is played to indicate the speech recognition engine is working. Once results are available the application returns and results (score and text) are available using dialplan functions.

The first text and score are \${SPEECH\_TEXT(0)} AND \${SPEECH\_SCORE(0)} while the second

are \${SPEECH\_TEXT(1)} and \${SPEECH\_SCORE(1)}.

The first argument is the sound file and the second is the timeout integer in seconds.

### **Syntax**

SpeechBackground(sound\_file[,timeout[,options]])

### Arguments

- sound file
- timeout Timeout integer in seconds. Note the timeout will only start once the sound file has stopped playing.
- options
  - n Don't answer the channel if it has not already been answered.

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechCreate

# SpeechCreate()

#### Synopsis

Create a Speech Structure.

### Description

This application creates information to be used by all the other applications. It must be called before doing any speech recognition activities such as activating a grammar. It takes the engine name to use as the argument, if not specified the default engine will be used.

# **Syntax**

SpeechCreate(engine\_name)

### Arguments

• engine\_name

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechDeactivateGrammar

# SpeechDeactivateGrammar()

### Synopsis

Deactivate a grammar.

# Description

This deactivates the specified grammar so that it is no longer recognized.

### **Syntax**

SpeechDeactivateGrammar(grammar\_name)

#### Arguments

• grammar\_name - The grammar name to deactivate

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechDestroy

# SpeechDestroy()

### Synopsis

End speech recognition.

### Description

This destroys the information used by all the other speech recognition applications. If you call this application but end up wanting to recognize more speech, you must call SpeechCreate() again before calling any other application.

# Syntax

SpeechDestroy()

### Arguments

### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechLoadGrammar

# SpeechLoadGrammar()

### Synopsis

Load a grammar.

### Description

Load a grammar only on the channel, not globally.

### Syntax

```
SpeechLoadGrammar(grammar_name,path)
```

### Arguments

grammar\_namepath

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_SpeechProcessingSound

# SpeechProcessingSound()

# **Synopsis**

Change background processing sound.

### Description

This changes the processing sound that SpeechBackground plays back when the speech recognition engine is processing and working to get results.

#### Syntax

```
SpeechProcessingSound(sound_file)
```

### Arguments

• sound\_file

#### See Also

# Application\_UnpauseMonitor

# UnpauseMonitor()

# Synopsis

Unpause monitoring of a channel.

#### Description

Unpauses monitoring of a channel on which monitoring had previously been paused with PauseMonitor.

# **Syntax**

UnpauseMonitor()

Arguments

See Also

Application\_PauseMonitor

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_UnpauseQueueMember

UnpauseQueueMember()

Synopsis

Unpauses a queue member.

### Description

Unpauses (resumes calls to) a queue member. This is the counterpart to PauseQueueMember() and operates exactly the same way, except it unpauses instead of pausing the given interface.

This application sets the following channel variable upon completion:

- UPQMSTATUS The status of the attempt to unpause a queue member as a text string.
  - UNPAUSED
  - NOTFOUND

Example: UnpauseQueueMember(,SIP/3000)

### **Syntax**

UnpauseQueueMember([queuename,interface[,options[,reason]]])

#### Arguments

- queuename
- interface
- options
- reason Is used to add extra information to the appropriate queue\_log entries and manager events.

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_UserEvent

# UserEvent()

### Synopsis

Send an arbitrary event to the manager interface.

### Description

Sends an arbitrary event to the manager interface, with an optional *body* representing additional arguments. The *body* may be specified as a , delimited list of headers. Each additional argument will be placed on a new line in the event. The format of the event will be:

Event: UserEvent

UserEvent: <specified event name>

body

If no *body* is specified, only Event and UserEvent headers will be present.

# Syntax

UserEvent(eventname[,body])

#### Arguments

- eventname
- body

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Verbose

# Verbose()

### Synopsis

Send arbitrary text to verbose output.

### Description

Sends an arbitrary text message to verbose output.

### **Syntax**

```
Verbose([level,message])
```

### Arguments

- level Must be an integer value. If not specified, defaults to 0.
- message Output text message.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_VMAuthenticate

### VMAuthenticate()

### Synopsis

Authenticate with Voicemail passwords.

# Description

This application behaves the same way as the Authenticate application, but the passwords are taken from <code>voicemail.conf</code>. If the *mailbox* is specified, only that mailbox's password will be considered valid. If the *mailbox* is not specified, the channel variable This application behaves the same way as the Authenticate application, but the passwords are taken from <code>None-AUTH\_MAILBOX</code> will be set with the authenticated mailbox.

The VMAuthenticate application will exit if the following DTMF digit is entered as Mailbox or Password, and the extension exists:

Jump to the a extension in the current dialplan context.

### Syntax

```
VMAuthenticate([mailbox][@context][,options])
```

#### Arguments

- mailbox
  - mailbox
  - context
- options
  - s Skip playing the initial prompts.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_VMSayName

# VMSayName()

### Synopsis

Play the name of a voicemail user

# Description

This application will say the recorded name of the voicemail user specified as the argument to this application. If no context is provided, default is assumed.

### **Syntax**

```
VMSayName([mailbox][@context])
```

#### Arguments

- mailbox
  - mailbox
  - context

### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_VoiceMail

### VoiceMail()

### Synopsis

Leave a Voicemail message.

### Description

This application allows the calling party to leave a message for the specified list of mailboxes. When multiple mailboxes are specified, the greeting will be taken from the first mailbox specified. Dialplan execution will stop if the specified mailbox does not exist.

The Voicemail application will exit if any of the following DTMF digits are received:

Jump to the o extension in the current dialplan context.

Jump to the a extension in the current dialplan context.

This application will set the following channel variable upon completion:

- VMSTATUS This indicates the status of the execution of the VoiceMail application.
  - SUCCESS
  - USEREXIT
  - FAILED

### Syntax

```
VoiceMail(mailbox1[&mailbox2[&...]][,options])
```

#### Arguments

- mailboxs
  - mailbox1
  - mailbox2
- options
  - b Play the busy greeting to the calling party.
  - d Accept digits for a new extension in context c, if played during the greeting. Context defaults to the current context.
  - g Use the specified amount of gain when recording the voicemail message. The units are whole-number decibels (dB). Only works on supported technologies, which is DAHDI only.
  - s Skip the playback of instructions for leaving a message to the calling party.
  - u Play the unavailable greeting.
  - U Mark message as URGENT.
  - P Mark message as PRIORITY.

### See Also

# Application\_VoiceMailMain

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_VoiceMailMain

# VoiceMailMain()

#### Synopsis

Check Voicemail messages.

### Description

This application allows the calling party to check voicemail messages. A specific *mailbox*, and optional corresponding *context*, may be specified. If a *mailbox* is not provided, the calling party will be prompted to enter one. If a *context* is not specified, the default context will be used.

The VoiceMailMain application will exit if the following DTMF digit is entered as Mailbox or Password, and the extension exists:

Jump to the a extension in the current dialplan context.

### Syntax

```
VoiceMailMain([mailbox][@context][,options])
```

#### Arguments

- mailbox
  - mailbox
  - context
- options
  - p Consider the *mailbox* parameter as a prefix to the mailbox that is entered by the caller.
  - g Use the specified amount of gain when recording a voicemail message. The units are whole-number decibels (dB).
  - s Skip checking the passcode for the mailbox.
  - a Skip folder prompt and go directly to folder specified. Defaults to INBOX (or 0).
    - folder
    - 0 INBOX
    - 1 Old
    - 2 Work
    - 3 Family
    - 4 Friends
    - 5 Cust1
    - 6 Cust27 Cust3
    - 8 Cust4
    - 9 Cust5
  - 0 INBOX
  - 1 Old
  - 2 Work
  - 3 Family

# Application\_Wait

# Wait()

#### Synopsis

Waits for some time.

### Description

This application waits for a specified number of seconds.

#### Syntax

```
Wait(seconds)
```

#### Arguments

seconds - Can be passed with fractions of a second. For example, 1.5 will ask the application to wait for 1.5 seconds.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitExten

# WaitExten()

# Synopsis

Waits for an extension to be entered.

### Description

This application waits for the user to enter a new extension for a specified number of seconds.

Use of the application WaitExten within a macro will not function as expected. Please use the Read application in order to read DTMF from a channel currently executing a macro.

### Syntax

```
WaitExten([seconds[,options]])
```

### Arguments

options

- seconds Can be passed with fractions of a second. For example, 1.5 will ask the application to wait for 1.5 seconds.
- m Provide music on hold to the caller while waiting for an extension.
  - - x Specify the class for music on hold.

#### See Also

# Application\_BackGround Function\_TIMEOUT

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitForNoise

# WaitForNoise()

### Synopsis

Waits for a specified amount of noise.

### Description

Waits for up to *noiserequired* milliseconds of noise, *iterations* times. An optional *timeout* specified the number of seconds to return after, even if we do not receive the specified amount of noise. Use *timeout* with caution, as it may defeat the purpose of this application, which is to wait indefinitely until noise is detected on the line.

### Syntax

WaitForNoise(noiserequired[,iterations[,timeout]])

#### Arguments

- noiserequired
- iterations If not specified, defaults to 1.
- timeout Is specified only to avoid an infinite loop in cases where silence is never achieved.

### See Also

# Application\_WaitForSilence

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitForRing

### WaitForRing()

### Synopsis

Wait for Ring Application.

#### Description

Returns 0 after waiting at least *timeout* seconds, and only after the next ring has completed. Returns 0 on success or -1 on hangup.

# **Syntax**

WaitForRing(timeout)

#### Arguments

• timeout

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitForSilence

# WaitForSilence()

#### Synopsis

Waits for a specified amount of silence.

### Description

Waits for up to *silencerequired* milliseconds of silence, *iterations* times. An optional *timeout* specified the number of seconds to return after, even if we do not receive the specified amount of silence. Use *timeout* with caution, as it may defeat the purpose of this application, which is to wait indefinitely until silence is detected on the line. This is particularly useful for reverse-911-type call broadcast applications where you need to wait for an answering machine to complete its spiel before playing a message.

Typically you will want to include two or more calls to WaitForSilence when dealing with an answering machine; first waiting for the spiel to finish, then waiting for the beep, etc.

# Examples:

WaitForSilence(500,2) will wait for 1/2 second of silence, twice

WaitForSilence(1000) will wait for 1 second of silence, once

WaitForSilence(300,3,10) will wait for 300ms silence, 3 times, and returns after 10 sec, even if silence is not detected

Sets the channel variable Sets the channel variable None - WAITSTATUS to one of these values:

• WAITSTATUS -

- SILENCE if exited with silence detected.
- TIMEOUT if exited without silence detected after timeout.

# Syntax

WaitForSilence(silencerequired[,iterations[,timeout]])

#### Arguments

- silencerequired
- iterations If not specified, defaults to 1.
- timeout Is specified only to avoid an infinite loop in cases where silence is never achieved.

#### See Also

# Application\_WaitForNoise

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitMusicOnHold

# WaitMusicOnHold()

### Synopsis

Wait, playing Music On Hold.

# Description

!!! DEPRECATED. Use MusicOnHold instead !!!

Plays hold music specified number of seconds. Returns 0 when done, or -1 on hangup. If no hold music is available, the delay will still occur with no sound.

!!! DEPRECATED. Use MusicOnHold instead !!!

# **Syntax**

WaitMusicOnHold(delay)

# Arguments

• delay

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_WaitUntil

# WaitUntil()

# Synopsis

Wait (sleep) until the current time is the given epoch.

### Description

Waits until the given epoch.

Sets Sets None - WAITUNTILSTATUS to one of the following values:

- WAITUNTILSTATUS -
  - OK Wait succeeded.
  - FAILURE Invalid argument.
  - HANGUP Channel hungup before time elapsed.
  - PAST Time specified had already past.

### Syntax

WaitUntil(epoch)

### Arguments

• epoch

### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_While

### While()

### Synopsis

Start a while loop.

### Description

Start a While Loop. Execution will return to this point when EndWhile() is called until expr is no longer true.

### Syntax

While(expr)

#### Arguments

• expr

#### See Also

Application\_EndWhile Application\_ExitWhile Application\_ContinueWhile

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Application\_Zapateller

# Zapateller()

Synopsis

Block telemarketers with SIT.

### Description

Generates special information tone to block telemarketers from calling you.

This application will set the following channel variable upon completion:

- ZAPATELLERSTATUS This will contain the last action accomplished by the Zapateller application. Possible values include:
  - NOTHING
  - ANSWERED
  - ZAPPED

#### Syntax

Zapateller(options)

### Arguments

- options Comma delimited list of options.
  - answer Causes the line to be answered before playing the tone.
  - nocallerid Causes Zapateller to only play the tone if there is no callerid information available.

# **Function AGC**

# AGC()

# Synopsis

Apply automatic gain control to audio on a channel.

### Description

The AGC function will apply automatic gain control to the audio on the channel that it is executed on. Using rx for audio received and tx for audio transmitted to the channel. When using this function you set a target audio level. It is primarily intended for use with analog lines, but could be useful for other channels as well. The target volume is set with a number between 1-32768. The larger the number the louder (more gain) the channel will receive.

### Examples:

```
exten \Rightarrow 1,1,Set(AGC(rx)=8000)
```

exten  $\Rightarrow$  1,2,Set(AGC(tx)=off)

### **Syntax**

### AGC(channeldirection)

#### Arguments

• channeldirection - This can be either rx or tx

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_AGENT

# AGENT()

Synopsis

Gets information about an Agent

Description

### Syntax

AGENT(agentid[,item])

### Arguments

- $^{ullet}$  agentid
- item The valid items to retrieve are:
  - $\bullet$  status (default) The status of the agent (LOGGEDIN | LOGGEDOUT)
  - password The password of the agent
  - name The name of the agent
  - mohclass MusicOnHold class
  - channel The name of the active channel for the Agent (AgentLogin)
  - fullchannel The untruncated name of the active channel for the Agent (AgentLogin)

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function ARRAY**

### ARRAY()

### Synopsis

Allows setting multiple variables at once.

# Description

The comma-delimited list passed as a value to which the function is set will be interpreted as a set of values to which the comma-delimited list of variable names in the argument should be set.

Example: Set(ARRAY(var1,var2)=1,2) will set var1 to 1 and var2 to 2

#### Syntax

```
ARRAY(var1[,var2[,...][,varN]])
```

#### Arguments

- var1
- var2
- varN

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_AST\_CONFIG

# AST\_CONFIG()

### Synopsis

Retrieve a variable from a configuration file.

### Description

This function reads a variable from an Asterisk configuration file.

# **Syntax**

```
AST_CONFIG(config_file,category,variable_name)
```

### Arguments

- config\_file
- category
- variable\_name

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_AUDIOHOOK\_INHERIT

### AUDIOHOOK\_INHERIT()

### Synopsis

Set whether an audiohook may be inherited to another channel

# Description

By enabling audiohook inheritance on the channel, you are giving permission for an audiohook to be inherited by a descendent channel. Inheritance may be be disabled at any point as well.

# Example scenario:

exten => 5000,n,Dial(SIP/5000)

```
exten => 2000,1,MixMonitor(blah.wav)

exten => 2000,n,Set(AUDIOHOOK_INHERIT(MixMonitor)=yes)

exten => 2000,n,Dial(SIP/2000)

exten => 4000,1,Dial(SIP/4000)

exten => 5000,1,MixMonitor(blah2.wav)
```

In this basic dialplan scenario, let's consider the following sample calls

Call 1: Caller dials 2000. The person who answers then executes an attended transfer to 4000.

Result: Since extension 2000 set MixMonitor to be inheritable, after the transfer to 4000 has completed, the call will continue to be recorded to blah.wav Call 2: Caller dials 5000. The person who answers then executes an attended transfer to 4000.

Result: Since extension 5000 did not set MixMonitor to be inheritable, the recording will stop once the call has been transferred to 4000.

#### Syntax

AUDIOHOOK\_INHERIT(source)

### Arguments

- source The built-in sources in Asterisk are Note that the names are not case-sensitive
  - MixMonitor
  - Chanspy
  - Volume

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_BASE64\_DECODE

BASE64\_DECODE()

Synopsis

Decode a base64 string.

Description

Returns the plain text string.

### Syntax

BASE64\_DECODE(string)

### Arguments

• string - Input string.

### See Also

Function\_BASE64\_ENCODE Function\_AES\_DECRYPT Function\_AES\_ENCRYPT

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

Function\_BASE64\_ENCODE

BASE64\_ENCODE()

Synopsis

Encode a string in base64.

Description

Returns the base64 string.

# Syntax

BASE64\_ENCODE(string)

### Arguments

• string - Input string

### See Also

Function\_BASE64\_DECODE Function\_AES\_DECRYPT Function\_AES\_ENCRYPT

# Import Version

# Function\_BLACKLIST

**BLACKLIST()** 

Synopsis

Check if the callerid is on the blacklist.

### Description

Uses astdb to check if the Caller\*ID is in family blacklist. Returns 1 or 0.

### **Syntax**

BLACKLIST()

Arguments

See Also

Function\_DB

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CALENDAR\_BUSY

CALENDAR\_BUSY()

Synopsis

Determine if the calendar is marked busy at this time.

### Description

Check the specified calendar's current busy status.

### **Syntax**

```
CALENDAR_BUSY(calendar)
```

#### Arguments

• calendar

#### See Also

```
Function_CALENDAR_EVENT
Function_CALENDAR_QUERY
Function_CALENDAR_QUERY_RESULT
Function_CALENDAR_WRITE
```

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CALENDAR\_EVENT

### CALENDAR\_EVENT()

### Synopsis

Get calendar event notification data from a notification call.

# Description

Whenever a calendar event notification call is made, the event data may be accessed with this function.

#### Syntax

```
CALENDAR_EVENT(field)
```

### Arguments

- field
  - summary The VEVENT SUMMARY property or Exchange event 'subject'
  - description The text description of the event
  - organizer The organizer of the event
  - location The location of the eventt
  - categories The categories of the event
  - $\bullet$  priority The priority of the event
  - calendar The name of the calendar associated with the event
  - uid The unique identifier for this event

- start The start time of the event
- · end The end time of the event
- busystate The busy state of the event 0=FREE, 1=TENTATIVE, 2=BUSY

#### See Also

Function\_CALENDAR\_BUSY Function\_CALENDAR\_QUERY Function\_CALENDAR\_QUERY\_RESULT Function\_CALENDAR\_WRITE

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CALENDAR\_QUERY

# CALENDAR\_QUERY()

### Synopsis

Query a calendar server and store the data on a channel

#### Description

Get a list of events in the currently accessible timeframe of the *calendar* The function returns the id for accessing the result with CALENDAR\_QUERY\_RESULT()

### **Syntax**

CALENDAR\_QUERY(calendar[,start[,end]])

#### Arguments

- calendar The calendar that should be queried
- start The start time of the query (in seconds since epoch)
- end The end time of the query (in seconds since epoch)

#### See Also

Function\_CALENDAR\_BUSY Function\_CALENDAR\_EVENT Function\_CALENDAR\_QUERY\_RESULT Function\_CALENDAR\_WRITE

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CALENDAR\_QUERY\_RESULT

CALENDAR\_QUERY\_RESULT()

#### Synopsis

Retrieve data from a previously run CALENDAR\_QUERY() call

## Description

After running CALENDAR\_QUERY and getting a result *id*, calling CALENDAR\_QUERY with that *id* and a *field* will return the data for that field. If multiple events matched the query, and *entry* is provided, information from that event will be returned.

#### **Syntax**

```
CALENDAR_QUERY_RESULT(id,field[,entry])
```

#### Arguments

- id The query ID returned by CALENDAR\_QUERY
- field
  - getnum number of events occurring during time range
    - summary A summary of the event
    - description The full event description
    - organizer The event organizer
    - location The event location
    - categories The categories of the event
    - priority The priority of the event
    - calendar The name of the calendar associted with the event
    - uid The unique identifier for the event
    - start The start time of the event (in seconds since epoch)
    - end The end time of the event (in seconds since epoch)
    - busystate The busy status of the event 0=FREE, 1=TENTATIVE, 2=BUSY
- entry Return data from a specific event returned by the query

#### See Also

Function\_CALENDAR\_BUSY Function\_CALENDAR\_EVENT Function\_CALENDAR\_QUERY Function\_CALENDAR\_WRITE

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CALENDAR\_WRITE

## CALENDAR\_WRITE()

#### Synopsis

Write an event to a calendar

### Description

Example: CALENDAR\_WRITE(calendar,field1,field2,field3)=val1,val2,val3

The field and value arguments can easily be set/passed using the HASHKEYS() and HASH() functions

## **Syntax**

CALENDAR\_WRITE(calendar,field[,...])

#### Arguments

- calendar The calendar to write to
- field
  - summary A summary of the event
  - description The full event description
  - organizer The event organizer
  - location The event location
  - categories The categories of the event
  - priority The priority of the event
  - uid The unique identifier for the event
  - start The start time of the event (in seconds since epoch)
  - end The end time of the event (in seconds since epoch)
  - busystate The busy status of the event 0=FREE, 1=TENTATIVE, 2=BUSY

#### See Also

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function CALLCOMPLETION**

### CALLCOMPLETION()

### Synopsis

Get or set a call completion configuration parameter for a channel.

### Description

The CALLCOMPLETION function can be used to get or set a call completion configuration parameter for a channel. Note that setting a configuration parameter will only change the parameter for the duration of the call. For more information see doc/AST.pdf. For more information on call completion parameters, see configs/ccss.conf.sample.

#### Syntax

CALLCOMPLETION(option)

#### Arguments

- option The allowable options are:
  - cc\_agent\_policy
  - cc\_monitor\_policycc\_offer\_timer

  - ccnr\_available\_timer
  - ccbs\_available\_timer
  - cc\_recall\_timercc\_max\_agents

  - cc\_max\_monitors
  - cc\_callback\_macro
  - cc\_agent\_dialstring

# Function\_CALLERID

# CALLERID()

### Synopsis

Gets or sets Caller\*ID data on the channel.

# Description

Gets or sets Caller\*ID data on the channel. Uses channel callerid by default or optional callerid, if specified.

The allowable values for the *name-charset* field are the following:

Unknown

ISO8859-1

Withdrawn

ISO8859-2

ISO8859-3

ISO8859-4

ISO8859-5

ISO8859-7

ISO10646 Bmp String

ISO10646 UTF-8 String

### **Syntax**

CALLERID(datatype[,CID])

#### Arguments

- datatype The allowable datatypes are:
  - all
  - name
  - name-valid
  - name-charset
  - name-pres

  - num num-valid
  - num-plan
  - num-pres

  - subaddrsubaddr-valid
  - subaddr-type
  - subaddr-odd

**BUSY** 

**ANSWERED** 

Raw values for amaflags:

**OMIT** 

**BILLING** 

**DOCUMENTATION** 

Example: exten => 1,1,Set(CDR(userfield)=test)

#### Syntax

CDR(name[,options])

## Arguments

- name CDR field name:
  - clid Caller ID.
  - lastdata Last application arguments.
  - disposition ANSWERED, NO ANSWER, BUSY, FAILED.
  - src Source.
  - start Time the call started.
  - amaflags DOCUMENTATION, BILL, IGNORE, etc.
  - dst Destination.
  - answer Time the call was answered.
  - account code The channel's account code.
  - dcontext Destination context.
  - end Time the call ended.
  - uniqueid The channel's unique id.
  - dstchannel Destination channel.
  - duration Duration of the call.
  - userfield The channel's user specified field.
  - lastapp Last application.
  - billsec Duration of the call once it was answered.
  - channel Channel name.
  - sequence CDR sequence number.
- options
  - f Returns billsec or duration fields as floating point values.
  - 1 Uses the most recent CDR on a channel with multiple records
  - r Searches the entire stack of CDRs on the channel.
  - s Skips any CDR's that are marked 'LOCKED' due to forkCDR() calls. (on setting/writing CDR vars only)
  - u Retrieves the raw, unprocessed value. For example, 'start', 'answer', and 'end' will be retrieved as epoch values, when the u option is passed, but formatted as YYYY-MM-DD HH:MM:SS otherwise. Similarly, disposition and amaflags will return their raw integral values.

# Function\_CHANNEL

# **CHANNEL()**

### Synopsis

Gets/sets various pieces of information about the channel.

#### Description

Gets/sets various pieces of information about the channel, additional *item* may be available from the channel driver; see its documentation for details. Any *item* requested that is not available on the current channel will return an empty string.

## **Syntax**

CHANNEL (item)

### Arguments

- item Standard items (provided by all channel technologies) are: chan\_sip provides the following additional options: chan\_iax2 provides the following additional options: chan\_dahdi provides the following additional options:
  - audioreadformat R/O format currently being read.
  - audionativeformat R/O format used natively for audio.
  - audiowriteformat R/O format currently being written.
  - callgroup R/W call groups for call pickup.
  - channeltype R/O technology used for channel.
  - checkhangup R/O Whether the channel is hanging up (1/0)
  - language R/W language for sounds played.
  - musicclass R/W class (from musiconhold.conf) for hold music.
  - name The name of the channel
  - parkinglot R/W parkinglot for parking.
  - rxgain R/W set rxgain level on channel drivers that support it.
  - secure\_bridge\_signaling Whether or not channels bridged to this channel require secure signaling
  - secure\_bridge\_media Whether or not channels bridged to this channel require secure media
  - state R/O state for channel
  - tonezone R/W zone for indications played
  - transfercapability R/W ISDN Transfer Capability, one of:
    - SPEECH
    - DIGITAL
    - RESTRICTED\_DIGITAL
    - 3K1AUDIO
    - DIGITAL\_W\_TONES
    - VIDEO
  - txgain R/W set txgain level on channel drivers that support it.
  - videonativeformat R/O format used natively for video
  - trace R/W whether or not context tracing is enabled, only available if CHANNEL\_TRACE is defined.
  - peerip R/O Get the IP address of the peer.
  - recvip R/O Get the source IP address of the peer.
  - from R/O Get the URI from the From: header.
  - uri R/O Get the URI from the Contact: header.
  - useragent R/O Get the useragent.
  - peername R/O Get the name of the peer.
  - t38passthrough R/O 1 if T38 is offered or enabled in this channel, otherwise 0
  - rtpqos R/O Get QOS information about the RTP stream This option takes two additional arguments: Argument 1:
     audio Get data about the audio stream video Get data about the video stream text Get data about the text stream Argument

local\_ssrc Local SSRC (stream ID) local\_lostpackets Local lost packets local\_jitter Local calculated jitter (maximum) local\_minjitter Local calculated jitter (minimum) local\_normdevjitter Local calculated jitter (normal deviation) local\_stdevjitter Local calculated jitter (standard deviation) local\_count Number of received packets remote\_ssrc Remote SSRC (stream ID) remote\_lostpackets Remote lost packets remote\_jitter Remote reported jitter remote\_maxjitter Remote calculated jitter (maximum) remote\_minjitter Remote calculated jitter (minimum) remote\_normdevjitter Remote calculated jitter (normal deviation) remote\_stdevjitter Remote calculated jitter (standard deviation) remote\_count Number of transmitted packets rtt Round trip time maxrtt Round trip time (maximum) minrtt Round trip time (minimum) normdevrtt Round trip time (normal deviation) stdevrtt Round trip time (standard deviation) all All statistics (in a form suited to logging, but not for parsing)

- rtpdest R/O Get remote RTP destination information. This option takes one additional argument: Argument 1: audio Get audio destination video Get video destination text Get text destination
- dahdi\_channel R/O DAHDI channel related to this channel.
- dahdi\_span R/O DAHDI span related to this channel.
- dahdi\_type R/O DAHDI channel type, one of:
  - analog
  - mfc/r2
  - pri
  - pseudo
  - ss7
- keypad\_digits R/O PRI Keypad digits that came in with the SETUP message.
- reversecharge R/O PRI Reverse Charging Indication, one of:
  - -1 None
  - {{ 1}} Reverse Charging Requested
- no\_media\_path R/O PRI Nonzero if the channel has no B channel. The channel is either on hold or a call waiting call.

# Function\_CHANNELS

# **CHANNELS()**

#### Synopsis

Gets the list of channels, optionally filtering by a regular expression.

# Description

Gets the list of channels, optionally filtering by a *regular\_expression*. If no argument is provided, all known channels are returned. The *regular\_expression* must correspond to the POSIX.2 specification, as shown in **regex(7)**. The list returned will be space-delimited.

#### Syntax

```
CHANNELS([regular_expression])
```

#### Arguments

regular\_expression

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CHECKSIPDOMAIN

# **CHECKSIPDOMAIN()**

#### Synopsis

Checks if domain is a local domain.

### Description

This function checks if the *domain* in the argument is configured as a local SIP domain that this Asterisk server is configured to handle. Returns the domain name if it is locally handled, otherwise an empty string. Check the domain= configuration in sip.conf.

### Syntax

CHECKSIPDOMAIN(domain)

#### Arguments

• domain

### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CONNECTEDLINE

# **CONNECTEDLINE()**

#### Synopsis

Gets or sets Connected Line data on the channel.

# Description

Gets or sets Connected Line data on the channel.

The allowable values for the *name-charset* field are the following:

Unknown

ISO8859-1

Withdrawn

ISO8859-2

ISO8859-3

ISO8859-4

ISO8859-5

ISO8859-7

# ISO10646 Bmp String

# ISO10646 UTF-8 String

### Syntax

```
CONNECTEDLINE(datatype[,i])
```

### Arguments

- datatype The allowable datatypes are:

  - all name
  - $^{ullet}$  name-valid
  - name-charset
  - name-pres num

  - num-valid
  - num-plan
  - num-pres subaddr

  - subaddr-valid
  - subaddr-type
  - $^{ullet}$  subaddr-odd
- i If set, this will prevent the channel from sending out protocol messages because of the value being set

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CSV\_QUOTE

## CSV QUOTE()

### Synopsis

Quotes a given string for use in a CSV file, escaping embedded quotes as necessary

## Description

Example: \${CSV\_QUOTE("a,b" 123)} will return """a,b"" 123"

## Syntax

```
CSV_QUOTE(string)
```

### Arguments

• string

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_CUT

## CUT()

#### Synopsis

Slices and dices strings, based upon a named delimiter.

#### Description

Cut out information from a string ( varname ), based upon a named delimiter.

### **Syntax**

```
CUT(varname, char-delim, range-spec)
```

#### Arguments

- varname Variable you want cut
- char-delim Delimiter, defaults to -
- range-spec Number of the field you want (1-based offset), may also be specified as a range (with ) or group of ranges and fields
  (with & )

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Function DB**

### DB()

# Synopsis

Read from or write to the Asterisk database.

# Description

This function will read from or write a value to the Asterisk database. On a read, this function returns the corresponding value from the database, or blank if it does not exist. Reading a database value will also set the variable DB\_RESULT. If you wish to find out if an entry exists, use the DB\_EXISTS function.

#### Syntax

DB(family, key)

#### Arguments

familykey

#### See Also

Application\_DBdel Function\_DB\_DELETE Application\_DBdeltree Function DB EXISTS

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DB\_DELETE

DB\_DELETE()

### Synopsis

Return a value from the database and delete it.

# Description

This function will retrieve a value from the Asterisk database and then remove that key from the database. This function will retrieve a value from the Asterisk database and then remove that key from the database. None - DB\_RESULT will be set to the key's value if it exists.

# **Syntax**

DB\_DELETE(family,key)

# Arguments

familykey

#### See Also

Application\_DBdel Function\_DB Application\_DBdeltree

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DB\_EXISTS

# DB\_EXISTS()

### Synopsis

Check to see if a key exists in the Asterisk database.

### Description

This function will check to see if a key exists in the Asterisk database. If it exists, the function will return 1. If not, it will return 0. Checking for existence of a database key will also set the variable DB\_RESULT to the key's value if it exists.

#### Syntax

```
DB_EXISTS(family,key)
```

#### Arguments

familykey

#### See Also

# Function DB

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DEC

# DEC()

# **Synopsis**

Decrements the value of a variable, while returning the updated value to the dialplan

### Description

Decrements the value of a variable, while returning the updated value to the dialplan

Example: DEC(MyVAR) - Increments MyVar

Note: DEC(\${MyVAR}) - Is wrong, as INC expects the variable name, not its value

### Syntax

```
DEC(variable)
```

# Arguments

• variable - The variable name to be manipulated, without the braces.

### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DENOISE

# **DENOISE()**

# Synopsis

Apply noise reduction to audio on a channel.

#### Description

The DENOISE function will apply noise reduction to audio on the channel that it is executed on. It is very useful for noisy analog lines, especially when adjusting gains or using AGC. Use rx for audio received from the channel and tx to apply the filter to the audio being sent to the channel.

# Examples:

```
exten => 1,1,Set(DENOISE(rx)=on)
```

exten => 1,2,Set(DENOISE(tx)=off)

#### **Syntax**

DENOISE(channeldirection)

#### Arguments

• channeldirection - This can be either rx or tx the values that can be set to this are either on and off

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DEVICE\_STATE

**DEVICE STATE()** 

### Synopsis

Get or Set a device state.

## Description

The DEVICE\_STATE function can be used to retrieve the device state from any device state provider. For example:

NoOp(SIP/mypeer has state \${DEVICE\_STATE(SIP/mypeer)})

NoOp(Conference number 1234 has state \${DEVICE\_STATE(MeetMe:1234)})

The DEVICE\_STATE function can also be used to set custom device state from the dialplan. The Custom: prefix must be used. For example:

Set(DEVICE\_STATE(Custom:lamp1)=BUSY)

Set(DEVICE\_STATE(Custom:lamp2)=NOT\_INUSE)

You can subscribe to the status of a custom device state using a hint in the dialplan:

exten => 1234,hint,Custom:lamp1

The possible values for both uses of this function are:

UNKNOWN | NOT\_INUSE | INUSE | BUSY | INVALID | UNAVAILABLE | RINGING | RINGINUSE | ONHOLD

## **Syntax**

DEVICE\_STATE(device)

#### Arguments

• device

#### See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function DIALGROUP**

# **DIALGROUP()**

Synopsis

Manages a group of users for dialing.

## Description

Presents an interface meant to be used in concert with the Dial application, by presenting a list of channels which should be dialled when referenced.

When DIALGROUP is read from, the argument is interpreted as the particular *group* for which a dial should be attempted. When DIALGROUP is written to with no arguments, the entire list is replaced with the argument specified.

Functionality is similar to a queue, except that when no interfaces are available, execution may continue in the dialplan. This is useful when you want certain people to be the first to answer any calls, with immediate fallback to a queue when the front line people are busy or unavailable, but you still want front line people to log in and out of that group, just like a queue.

# Example:

```
exten => 1,1,Set(DIALGROUP(mygroup,add)=SIP/10)
exten => 1,n,Set(DIALGROUP(mygroup,add)=SIP/20)
exten => 1,n,Dial(${DIALGROUP(mygroup)})
```

#### Syntax

```
DIALGROUP(group[,op])
```

#### Arguments

- group
- op The operation name, possible values are:
   add add a channel name or interface (write-only) del remove a channel name or interface (write-only)

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DIALPLAN\_EXISTS

## **DIALPLAN\_EXISTS()**

#### Synopsis

Checks the existence of a dialplan target.

## Description

This function returns 1 if the target exits. Otherwise, it returns 0.

# Syntax

```
DIALPLAN_EXISTS(context[,extension[,priority]])
```

#### Arguments

- context
- extension
- priority

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function DUNDILOOKUP**

# **DUNDILOOKUP()**

### Synopsis

Do a DUNDi lookup of a phone number.

### Description

This will do a DUNDi lookup of the given phone number.

This function will return the Technology/Resource found in the first result in the DUNDi lookup. If no results were found, the result will be blank.

# Syntax

```
DUNDILOOKUP(number[,context[,options]])
```

#### Arguments

- number
- context If not specified the default will be e164.
- options
  - b Bypass the internal DUNDi cache

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DUNDIQUERY

# **DUNDIQUERY()**

### Synopsis

Initiate a DUNDi query.

### Description

This will do a DUNDi lookup of the given phone number.

The result of this function will be a numeric ID that can be used to retrieve the results with the DUNDIRESULT function.

### Syntax

```
DUNDIQUERY(number[,context[,options]])
```

#### Arguments

- number
- context If not specified the default will be e164.
- options
  - b Bypass the internal DUNDi cache

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_DUNDIRESULT

# **DUNDIRESULT()**

# Synopsis

Retrieve results from a DUNDIQUERY.

### Description

This function will retrieve results from a previous use\n" of the DUNDIQUERY function.

### Syntax

```
DUNDIRESULT(id[,resultnum])
```

# Arguments

- id The identifier returned by the DUNDIQUERY function.
- resultnum
  - number The number of the result that you want to retrieve, this starts at 1
  - getnum The total number of results that are available.

## See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_ENUMLOOKUP

# **ENUMLOOKUP()**

### Synopsis

General or specific querying of NAPTR records for ENUM or ENUM-like DNS pointers.

### Description

For more information see doc/AST.pdf.

#### Syntax

```
ENUMLOOKUP(number[,method-type[,options[,record#[,zone-suffix]]]])
```

#### Arguments

- number
- method-type If no method-type is given, the default will be sip.
- options
  - c Returns an integer count of the number of NAPTRs of a certain RR type. Combination of c and Method-type of ALL will return a count of all NAPTRs for the record.
  - u Returns the full URI and does not strip off the URI-scheme.
  - s Triggers ISN specific rewriting.
  - i Looks for branches into an Infrastructure ENUM tree.
  - d for a direct DNS lookup without any flipping of digits.
- record# If no record# is given, defaults to 1.
- zone-suffix If no zone-suffix is given, the default will be e164.arpa

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_ENUMQUERY

### **ENUMQUERY()**

# Synopsis

Initiate an ENUM query.

### Description

This will do a ENUM lookup of the given phone number.

### Syntax

```
ENUMQUERY(number[,method-type[,zone-suffix]])
```

#### Arguments

- number
- method-type If no method-type is given, the default will be sip.
- zone-suffix If no zone-suffix is given, the default will be e164.arpa

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_ENUMRESULT

# **ENUMRESULT()**

### Synopsis

Retrieve results from a ENUMQUERY.

### Description

This function will retrieve results from a previous use of the ENUMQUERY function.

### **Syntax**

ENUMRESULT(id,resultnum)

#### Arguments

- id The identifier returned by the ENUMQUERY function.
- resultnum The number of the result that you want to retrieve. Results start at 1. If this argument is specified as getnum, then it will return the total number of results that are available.

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_ENV

## ENV()

## Synopsis

Gets or sets the environment variable specified.

### Description

Variables starting with AST\_ are reserved to the system and may not be set.

# Syntax

ENV(varname)

# Arguments

• varname - Environment variable name See Also **Import Version** This documentation was imported from Asterisk version SVN-branch-1.8-r311874. **Function EVAL** EVAL() Synopsis Evaluate stored variables Description Using EVAL basically causes a string to be evaluated twice. When a variable or expression is in the dialplan, it will be evaluated at runtime. However, if the results of the evaluation is in fact another variable or expression, using EVAL will have it evaluated a second time. Example: If the Example: If the None - MYVAR contains Example: If the None - OTHERVAR, then the result of \${EVAL( Example: If the None - MYVAR )} in the dialplan will be the contents of Example: If the None - OTHERVAR. Normally just putting Example: If the None - MYVAR in the dialplan the result would be Example: If the None - OTHERVAR. Syntax EVAL(variable) Arguments • variable See Also Import Version This documentation was imported from Asterisk version SVN-branch-1.8-r311874. Function\_EXCEPTION **EXCEPTION()** Synopsis Retrieve the details of the current dialplan exception.

Description

Retrieve the details (specified *field* ) of the current dialplan exception.

# Syntax

EXCEPTION(field)

#### Arguments

- field The following fields are available for retrieval:
  - reason INVALID, ERROR, RESPONSETIMEOUT, ABSOLUTETIMEOUT, or custom value set by the RaiseException()
    application
  - context The context executing when the exception occurred.
  - exten The extension executing when the exception occurred.
  - priority The numeric priority executing when the exception occurred.

#### See Also

# Application\_RaiseException

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function EXISTS**

# EXISTS()

## Synopsis

Test the existence of a value.

### Description

Returns 1 if exists, 0 otherwise.

#### Syntax

EXISTS (data)

#### Arguments

• data

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_EXTENSION\_STATE

# **EXTENSION\_STATE()**

### Synopsis

Get an extension's state.

## Description

The EXTENSION\_STATE function can be used to retrieve the state from any hinted extension. For example:

NoOp(1234@default has state \${EXTENSION\_STATE(1234)})

NoOp(4567@home has state \${EXTENSION\_STATE(4567@home)})

The possible values returned by this function are:

UNKNOWN | NOT\_INUSE | INUSE | BUSY | INVALID | UNAVAILABLE | RINGING | RINGINUSE | HOLDINUSE | ONHOLD

## Syntax

EXTENSION\_STATE(extension[,context])

#### Arguments

- extension
- context If it is not specified defaults to default.

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function FAXOPT**

## FAXOPT()

## Synopsis

Gets/sets various pieces of information about a fax session.

# Description

FAXOPT can be used to override the settings for a FAX session listed in res\_fax.conf, it can also be used to retreive information about a FAX session that has finished eg. pages/status.

#### Syntax

FAXOPT(item)

#### Arguments

- item
  - ecm R/W Error Correction Mode (ECM) enable with 'yes', disable with 'no'.
  - error R/O FAX transmission error code upon failure.
  - filename R/O Filename of the first file of the FAX transmission.
  - filenames R/O Filenames of all of the files in the FAX transmission (comma separated).
  - headerinfo R/W FAX header information.
  - localstationid R/W Local Station Identification.
  - minrate R/W Minimum transfer rate set before transmission.
  - maxrate R/W Maximum transfer rate set before transmission.
  - modem R/W Modem type (v17/v27/v29).
  - pages R/O Number of pages transferred.
  - rate R/O Negotiated transmission rate.
  - remotestationid R/O Remote Station Identification after transmission.
  - resolution R/O Negotiated image resolution after transmission.
  - sessionid R/O Session ID of the FAX transmission.
  - status R/O Result Status of the FAX transmission.
  - statusstr R/O Verbose Result Status of the FAX transmission.

# Function\_FIELDNUM

# FIELDNUM()

### Synopsis

Return the 1-based offset of a field in a list

#### Description

Search the variable named *varname* for the string *value* delimited by *delim* and return a 1-based offset as to its location. If not found or an error occured, return 0.

The delimiter may be specified as a special or extended ASCII character, by encoding it. The characters  $\n$ ,  $\r$ , and  $\t$  are all recognized as the newline, carriage return, and tab characters, respectively. Also, octal and hexadecimal specifications are recognized by the patterns  $\n$  and  $\x$ HH, respectively. For example, if you wanted to encode a comma as the delimiter, you could use either  $\n$  054 or  $\x$ 2C.

Example: If \${example} contains ex-amp-le, then \${FIELDNUM(example,-,amp)} returns 2.

#### Syntax

FIELDNUM(varname, delim, value)

#### Arguments

- varname
- delim
- value

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function FIELDQTY**

# FIELDQTY()

#### Synopsis

Count the fields with an arbitrary delimiter

## Description

The delimiter may be specified as a special or extended ASCII character, by encoding it. The characters  $\n$ ,  $\r$ , and  $\t$  are all recognized as the newline, carriage return, and tab characters, respectively. Also, octal and hexadecimal specifications are recognized by the patterns  $\n$  and  $\x$ HH, respectively. For example, if you wanted to encode a comma as the delimiter, you could use either  $\n$  054 or  $\x$ 2C.

Example: If \${example} contains ex-amp-le, then \${FIELDQTY(example,-)} returns 3.

# Syntax

FIELDOTY(varname, delim)

### Arguments

- varname
- delim

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_FILE

### FILE()

## Synopsis

Read or write text file.

### Description

Read and write text file in character and line mode. Examples: Read mode (byte): reads the entire content of the file. Set(foo=\${FILE(/tmp/test.txt)}) reads from the 11th byte to the end of the file (i.e. skips the first 10). Set(foo=\${FILE(/tmp/test.txt,10)}) ;reads from the 11th to 20th byte in the file (i.e. skip the first 10, then read 10 bytes). Set(foo=\${FILE(/tmp/test.txt,10,10)}) Read mode (line): ; reads the 3rd line of the file. Set(foo=\${FILE(/tmp/test.txt,3,1,I)}) ; reads the 3rd and 4th lines of the file. Set(foo=\${FILE(/tmp/test.txt,3,2,I)}) ; reads from the third line to the end of the file. Set(foo=\${FILE(/tmp/test.txt,3,,I)}) ; reads the last three lines of the file. Set(foo=\${FILE(/tmp/test.txt,-3,,I)}) ; reads the 3rd line of a DOS-formatted file. Set(foo=\${FILE(/tmp/test.txt,3,1,I,d)}) Write mode (byte): ; truncate the file and write "bar" Set(FILE(/tmp/test.txt)=bar) ; Append "bar" Set(FILE(/tmp/test.txt,,,a)=bar)

; Replace the first byte with "bar" (replaces 1 character with 3)

Set(FILE(/tmp/test.txt,0,1)=bar)

; Replace 10 bytes beginning at the 21st byte of the file with "bar"

Set(FILE(/tmp/test.txt,20,10)=bar)

; Replace all bytes from the 21st with "bar"

Set(FILE(/tmp/test.txt,20)=bar)

; Insert "bar" after the 4th character

Set(FILE(/tmp/test.txt,4,0)=bar)

Write mode (line):

; Replace the first line of the file with "bar"

Set(FILE(/tmp/foo.txt,0,1,I)=bar)

; Replace the last line of the file with "bar"

Set(FILE(/tmp/foo.txt,-1,,I)=bar)

; Append "bar" to the file with a newline

Set(FILE(/tmp/foo.txt,,,al)=bar)

#### **Syntax**

```
FILE(filename[,offset[,length[,options[,format]]]])
```

#### Arguments

- filename
- offset Maybe specified as any number. If negative, offset specifies the number of bytes back from the end of the file.
- length If specified, will limit the length of the data read to that size. If negative, trims length bytes from the end of the file.
- options
  - 1 Line mode: offset and length are assumed to be measured in lines, instead of byte offsets.
  - a In write mode only, the append option is used to append to the end of the file, instead of overwriting the existing file.
  - d In write mode and line mode only, this option does not automatically append a newline string to the end of a value. This is useful for deleting lines, instead of setting them to blank.
- format The format parameter may be used to delimit the type of line terminators in line mode.
  - u Unix newline format.
  - d DOS newline format.
  - m Macintosh newline format.

#### See Also

Function\_FILE\_COUNT\_LINE Function\_FILE\_FORMAT

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_FILE\_COUNT\_LINE

FILE\_COUNT\_LINE()

Synopsis

Obtains the number of lines of a text file.

Description

Returns the number of lines, or -1 on error.

### **Syntax**

```
FILE_COUNT_LINE(filename[,format])
```

#### Arguments

- filename
- format Format may be one of the following: If not specified, an attempt will be made to determine the newline format type. If not specified, an attempt will be made to determine the newline format type.
  - u Unix newline format.
  - d DOS newline format.
  - m Macintosh newline format.

### See Also

```
Function_FILE FUNCTION_FILE_FORMAT
```

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_FILE\_FORMAT

## FILE\_FORMAT()

Synopsis

Return the newline format of a text file.

# Description

Return the line terminator type:

'u' - Unix "\n" format

'd' - DOS "\r\n" format

'm' - Macintosh "\r" format

'x' - Cannot be determined

### **Syntax**

```
FILE_FORMAT(filename)
```

### Arguments

• filename

### See Also

```
Function_FILE Function_FILE_COUNT_LINE
```

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_FILTER

# FILTER()

### Synopsis

Filter the string to include only the allowed characters

## Description

Permits all characters listed in *allowed-chars*, filtering all others outs. In addition to literally listing the characters, you may also use ranges of characters (delimited by a –

Hexadecimal characters started with a  $\xspace x$  (i.e.  $\xspace x$ 20)

Octal characters started with a \0 (i.e. \040)

Also \t, \n and \r are recognized.

If you want the If you want the - character it needs to be prefixed with a {{}}

### Syntax

```
FILTER(allowed-chars,string)
```

#### Arguments

allowed-charsstring

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function FRAME TRACE**

# FRAME\_TRACE()

### Synopsis

View internal ast\_frames as they are read and written on a channel.

### Description

# **Examples:**

exten => 1,1,Set(FRAME\_TRACE(white)=DTMF\_BEGIN,DTMF\_END); view only DTMF frames.

exten => 1,1,Set(FRAME\_TRACE()=DTMF\_BEGIN,DTMF\_END); view only DTMF frames.

exten => 1,1,Set(FRAME\_TRACE(black)=DTMF\_BEGIN,DTMF\_END); view everything except DTMF frames.

### Syntax

```
FRAME_TRACE(filter list type)
```

#### Arguments

- filter list type A filter can be applied to the trace to limit what frames are viewed. This filter can either be a white or black list of frame types. When no filter type is present, white is used. If no arguments are provided at all, all frames will be output. Below are the different types of frames that can be filtered.
  - DTMF\_BEGIN
  - DTMF\_END
  - VOICE
  - VIDEO
  - CONTROL
  - NULL
  - IAX • TEXT
  - IMAGE
  - HTML
  - CNG
  - MODEM

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_GLOBAL

# GLOBAL()

Synopsis

Gets or sets the global variable specified.

## Description

Set or get the value of a global variable specified in varname

## **Syntax**

```
GLOBAL(varname)
```

### Arguments

• varname - Global variable name

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_GROUP

# **GROUP()**

# Synopsis

Gets or sets the channel group.

### Description

category can be employed for more fine grained group management. Each channel can only be member of exactly one group per category.

# Syntax

```
GROUP([category])
```

#### Arguments

• category - Category name.

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_GROUP\_COUNT

# **GROUP\_COUNT()**

Synopsis

Counts the number of channels in the specified group.

## Description

Calculates the group count for the specified group, or uses the channel's current group if not specified (and non-empty).

### Syntax

```
GROUP_COUNT([groupname[,category]])
```

#### Arguments

- groupname Group name.
- category Category name

### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_GROUP\_LIST

# **GROUP\_LIST()**

Synopsis

Gets a list of the groups set on a channel.

## Description

Gets a list of the groups set on a channel.

### **Syntax**

```
GROUP_LIST()
```

#### Arguments

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_GROUP\_MATCH\_COUNT

# **GROUP\_MATCH\_COUNT()**

## Synopsis

Counts the number of channels in the groups matching the specified pattern.

## Description

Calculates the group count for all groups that match the specified pattern. Note: category matching is applied after matching based on group. Uses standard regular expression matching on both (see regex(7)).

### **Syntax**

```
GROUP_MATCH_COUNT(groupmatch[,category])
```

### Arguments

- groupmatch A standard regular expression used to match a group name.
- category A standard regular expression used to match a category name.

#### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_HASH

## HASH()

### Synopsis

Implementation of a dialplan associative array

## Description

In two arguments mode, gets and sets values to corresponding keys within a named associative array. The single-argument mode will only work when assigned to from a function defined by func\_odbc

### **Syntax**

```
HASH(hashname[,hashkey])
```

### Arguments

- hashname
- hashkey

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_HASHKEYS

# HASHKEYS()

#### Synopsis

Retrieve the keys of the HASH() function.

### Description

Returns a comma-delimited list of the current keys of the associative array defined by the HASH() function. Note that if you iterate over the keys of the result, adding keys during iteration will cause the result of the HASHKEYS() function to change.

### **Syntax**

HASHKEYS(hashname)

#### Arguments

• hashname

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_HINT

## HINT()

### Synopsis

Get the devices set for a dialplan hint.

### Description

The HINT function can be used to retrieve the list of devices that are mapped to a dialplan hint. For example:

NoOp(Hint for Extension 1234 is \${HINT(1234)})

## Syntax

HINT(extension[@context][,options])

#### Arguments

- extension
  - extension
  - context
- options
  - n Retrieve name on the hint instead of list of devices.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_IAXPEER

## IAXPEER()

#### Synopsis

Gets IAX peer information.

## Description

#### Syntax

IAXPEER(peername[,item])

### Arguments

- peername
- CURRENTCHANNEL If peername is specified to this value, return the IP address of the endpoint of the current channel
- item If peername is specified, valid items are:
  - ip (default) The IP address.
  - status The peer's status (if qualify=yes)
  - mailbox The configured mailbox.
  - context The configured context.
  - expire The epoch time of the next expire.
  - dynamic Is it dynamic? (yes/no).
  - callerid\_name The configured Caller ID name.
  - callerid\_num The configured Caller ID number.
  - codecs The configured codecs.
  - codecx Preferred codec index number x (beginning with 0)

#### See Also

# Function\_SIPPEER

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_IAXVAR

# IAXVAR()

Synopsis

Sets or retrieves a remote variable.

Description

## **Syntax**

IAXVAR(varname)

#### Arguments

• varname

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function ICONV**

## ICONV()

Synopsis

Converts charsets of strings.

## Description

Converts string from *in-charset* into *out-charset*. For available charsets, use <code>iconv</code> -l on your shell command line.

Due to limitations within the API, ICONV will not currently work with charsets with embedded NULLs. If found, the string will terminate. Due to limitations within the API, ICONV will not currently work with charsets with embedded NULLs. If found, the string will terminate.

## Syntax

ICONV(in-charset,out-charset,string)

#### Arguments

- in-charset Input charset
- out-charset Output charset
- string String to convert, from in-charset to out-charset

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_IF

IF()

## Synopsis

Check for an expresion.

## Description

Returns the data following ? if true, else the data following :

## Syntax

```
IF(expresion?[true][:false])
```

## Arguments

- expresion
- retvalue
  - true
    - false

## See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_IFMODULE

## IFMODULE()

#### Synopsis

Checks if an Asterisk module is loaded in memory.

## Description

Checks if a module is loaded. Use the full module name as shown by the list in module list. Returns 1 if module exists in memory, otherwise 0

#### Syntax

IFMODULE(modulename.so)

#### Arguments

 $\bullet$  module name .so - Module name complete with .so

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Function IFTIME**

## IFTIME()

Synopsis

Temporal Conditional.

## Description

Returns the data following ? if true, else the data following :

## Syntax

```
IFTIME(timespec?[true][:false])
```

## Arguments

- $^{ullet}$  timespec
- retvalue
  - true
  - false

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_IMPORT

# IMPORT()

## Synopsis

Retrieve the value of a variable from another channel.

## Description

# Syntax

## IMPORT(channel,variable)

#### Arguments

- channel
- variable

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_INC

## INC()

#### Synopsis

Increments the value of a variable, while returning the updated value to the dialplan

## Description

Increments the value of a variable, while returning the updated value to the dialplan

Example: INC(MyVAR) - Increments MyVar

Note: INC(\${MyVAR}) - Is wrong, as INC expects the variable name, not its value

## Syntax

INC(variable)

#### Arguments

• variable - The variable name to be manipulated, without the braces.

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_ISNULL

# ISNULL()

## Synopsis

Check if a value is NULL.

## Description

Returns 1 if NULL or 0 otherwise.

## **Syntax**

ISNULL(data)

#### Arguments

• data

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_JABBER\_RECEIVE

# JABBER\_RECEIVE()

## Synopsis

Reads XMPP messages.

# Description

Receives a text message on the given *account* from the buddy identified by *jid* and returns the contents.

Example: \${JABBER\_RECEIVE(asterisk,bob@domain.com)} returns an XMPP message sent from bob@domain.com(or nothing in case of a time out), to the asterisk XMPP account configured in jabber.conf.

#### **Syntax**

JABBER\_RECEIVE(account, jid[, timeout])

## Arguments

- account The local named account to listen on (specified in jabber.conf)
- jid Jabber ID of the buddy to receive message from. It can be a bare JID (username@domain) or a full JID (username@domain/resource).
- timeout In seconds, defaults to 20.

#### See Also

Function\_JABBER\_STATUS Application\_JabberSend

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_JABBER\_STATUS

## JABBER\_STATUS()

#### Synopsis

Retrieves a buddy's status.

## Description

Retrieves the numeric status associated with the buddy identified by *jid*. If the buddy does not exist in the buddylist, returns 7.

Status will be 1-7.

1=Online, 2=Chatty, 3=Away, 4=XAway, 5=DND, 6=Offline

If not in roster variable will be set to 7.

Example: \${JABBER\_STATUS(asterisk,bob@domain.com)} returns 1 if bob@domain.com is online. asterisk is the associated XMPP account configured in jabber.conf.

## **Syntax**

JABBER\_STATUS(account, jid)

#### Arguments

- account The local named account to listen on (specified in jabber.conf)
- jid Jabber ID of the buddy to receive message from. It can be a bare JID (username@domain) or a full JID (username@domain/resource).

## See Also

Function\_JABBER\_RECEIVE Application\_JabberSend

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_KEYPADHASH

## **KEYPADHASH()**

#### Synopsis

Hash the letters in string into equivalent keypad numbers.

## Description

Example: \${KEYPADHASH(Les)} returns "537"

## **Syntax**

```
KEYPADHASH(string)
```

## Arguments

• string

## See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_LEN

# LEN()

## **Synopsis**

Return the length of the string given.

# Description

Example: \${LEN(example)} returns 7

## Syntax

```
LEN(string)
```

#### Arguments

• string

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_LISTFILTER

# LISTFILTER()

## Synopsis

Remove an item from a list, by name.

## Description

Remove *value* from the list contained in the *varname* variable, where the list delimiter is specified by the *delim* parameter. This is very useful for removing a single channel name from a list of channels, for example.

## **Syntax**

```
LISTFILTER(varname,delim,value)
```

#### Arguments

- varname
- delim
- value

## See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_LOCAL

# LOCAL()

## Synopsis

Manage variables local to the gosub stack frame.

## Description

Read and write a variable local to the gosub stack frame, once we Return() it will be lost (or it will go back to whatever value it had before the Gosub()).

## **Syntax**

```
LOCAL(varname)
```

#### Arguments

• varname

#### See Also

Application\_Gosubl Application\_Gosublf Application\_Return

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_LOCAL\_PEEK

LOCAL\_PEEK()

Synopsis

Retrieve variables hidden by the local gosub stack frame.

#### Description

Read a variable *varname* hidden by n levels of gosub stack frames. Note that  ${LOCAL\_PEEK(0,foo)}$  is the same as Read a variable None - foo, since the value of n peeks under 0 levels of stack frames; in other words, 0 is the current level. If n exceeds the available number of stack frames, then an empty string is returned.

## **Syntax**

LOCAL\_PEEK(n, varname)

#### Arguments

- n • varname
- See Also

Application\_Gosuble
Application\_Gosuble
Application Return

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_LOCK

LOCK()

Synopsis

Attempt to obtain a named mutex.

## Description

Attempts to grab a named lock exclusively, and prevents other channels from obtaining the same lock. LOCK will wait for the lock to become available. Returns 1 if the lock was obtained or 0 on error.

To avoid the possibility of a deadlock, LOCK will only attempt to obtain the lock for 3 seconds if the channel already has another lock. To avoid the possibility of a deadlock, LOCK will only attempt to obtain the lock for 3 seconds if the channel already has another lock.

## **Syntax**

LOCK(lockname)

#### Arguments

• lockname

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_MAILBOX\_EXISTS

## MAILBOX\_EXISTS()

#### Synopsis

Tell if a mailbox is configured.

## Description

Returns a boolean of whether the corresponding *mailbox* exists. If *context* is not specified, defaults to the default context.

## Syntax

MAILBOX\_EXISTS(mailbox[,context])

#### Arguments

- $^{ullet}$  mailbox
- context

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_MASTER\_CHANNEL

# MASTER\_CHANNEL()

#### Synopsis

Gets or sets variables on the master channel

#### Description

Allows access to the channel which created the current channel, if any. If the channel is already a master channel, then accesses local channel variables.

## Syntax

```
MASTER_CHANNEL()
```

Arguments

See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Function MATH**

## MATH()

Synopsis

Performs Mathematical Functions.

#### Description

Performs mathematical functions based on two parameters and an operator. The returned value type is *type* 

Example: Set(i=\${MATH(123%16,int)}) - sets var i=11

## **Syntax**

```
MATH(expression[,type])
```

#### Arguments

- expression Is of the form: number1 op number2 where the possible values for op are:
   +,-,/,\*,%,<<,>>,^,AND,OR,XOR,<,%gt;,>=,<=,== (and behave as their C equivalents)</li>
- type Wanted type of result: f, float float(default) i, int integer h, hex hex c, char char

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_MD5 MD5() Synopsis Computes an MD5 digest. Description Computes an MD5 digest. Syntax MD5(data) Arguments • data See Also Import Version This documentation was imported from Asterisk version SVN-branch-1.8-r311874. Function\_MEETME\_INFO MEETME\_INFO() Synopsis Query a given conference of various properties. Description **Syntax** MEETME\_INFO(keyword,confno) Arguments • keyword - Options: • lock - Boolean of whether the corresponding conference is locked. • parties - Number of parties in a given conference activity - Duration of conference in seconds.

# See Also

# Application\_MeetMe

• confino - Conference number to retrieve information from.

• dynamic - Boolean of whether the corresponding conference is dynamic.

## Function\_MINIVMACCOUNT

## **MINIVMACCOUNT()**

#### Synopsis

Gets MiniVoicemail account information.

#### Description

#### Syntax

MINIVMACCOUNT(account, item)

#### Arguments

- account
- item Valid items are:
  - path Path to account mailbox (if account exists, otherwise temporary mailbox).
  - hasaccount 1 is static Minivm account exists, 0 otherwise.
  - fullname Full name of account owner.
  - email Email address used for account.
  - etemplate Email template for account (default template if none is configured).
  - ptemplate Pager template for account (default template if none is configured).
  - account code Account code for the voicemail account.
  - pincode Pin code for voicemail account.
  - timezone Time zone for voicemail account.
  - language Language for voicemail account.
  - <channel variable name> Channel variable value (set in configuration for account).

Function\_MINIVMCOUNTER

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function MINIVMCOUNTER**

## **MINIVMCOUNTER()**

#### Synopsis

Reads or sets counters for MiniVoicemail message.

## Description

The operation is atomic and the counter is locked while changing the value. The counters are stored as text files in the minim account directories. It might be better to use realtime functions if you are using a database to operate your Asterisk.

## **Syntax**

```
MINIVMCOUNTER(account,name[,operand])
```

#### Arguments

- account If account is given and it exists, the counter is specific for the account. If account is a domain and the domain directory exists, counters are specific for a domain.
- name The name of the counter is a string, up to 10 characters.
- operand The counters never goes below zero. Valid operands for changing the value of a counter when assigning a value are:
  - i Increment by value.
  - d Decrement by value.
  - s Set to value.

## Function\_MUTEAUDIO

## **MUTEAUDIO()**

#### Synopsis

Muting audio streams in the channel

## Description

The MUTEAUDIO function can be used to mute inbound (to the PBX) or outbound audio in a call. Example:

# MUTEAUDIO(in)=on MUTEAUDIO(in)=off

## **Syntax**

MUTEAUDIO(direction)

#### Arguments

- direction Must be one of
  - in Inbound stream (to the PBX)
  - out Outbound stream (from the PBX)
  - all Both streams

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_ODBC

## ODBC()

## Synopsis

Controls ODBC transaction properties.

#### Description

The ODBC() function allows setting several properties to influence how a connected database processes transactions.

# Syntax

ODBC(property[,argument])

#### Arguments

- property
  - transaction Gets or sets the active transaction ID. If set, and the transaction ID does not exist and a *database name* is specified as an argument, it will be created.
  - forcecommit Controls whether a transaction will be automatically committed when the channel hangs up. Defaults to false. If a transaction ID is specified in the optional argument, the property will be applied to that ID, otherwise to the current active ID.
  - isolation Controls the data isolation on uncommitted transactions. May be one of the following: read\_committed, repeatable\_read, or serializable. Defaults to the database setting in res\_odbc.conf or read\_committed if not specified. If a transaction ID is specified as an optional argument, it will be applied to that ID, otherwise the current active ID.
- argument

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_ODBC\_FETCH

## ODBC\_FETCH()

## Synopsis

Fetch a row from a multirow query.

## Description

For queries which are marked as mode=multirow, the original query returns a *result-id* from which results may be fetched. This function implements the actual fetch of the results.

This also sets This also sets None - ODBC\_FETCH\_STATUS.

- ODBC FETCH STATUS -
  - SUCESS If rows are available.
  - FAILURE If no rows are available.

#### Syntax

```
ODBC_FETCH(result-id)
```

#### Arguments

• result-id

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Function PASSTHRU**

# PASSTHRU()

## **Synopsis**

Pass the given argument back as a value.

#### Description

Literally returns the given *string*. The intent is to permit other dialplan functions which take a variable name as an argument to be able to take a literal string, instead.

#### Syntax

```
PASSTHRU([string])
```

#### Arguments

• string

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_PITCH\_SHIFT

## PITCH\_SHIFT()

#### Synopsis

Pitch shift both tx and rx audio streams on a channel.

## Description

## **Examples:**

```
exten => 1,1,Set(PITCH_SHIFT(tx)=highest); raises pitch an octave

exten => 1,1,Set(PITCH_SHIFT(rx)=higher); raises pitch more

exten => 1,1,Set(PITCH_SHIFT(both)=high); raises pitch

exten => 1,1,Set(PITCH_SHIFT(rx)=low); lowers pitch

exten => 1,1,Set(PITCH_SHIFT(tx)=lower); lowers pitch more

exten => 1,1,Set(PITCH_SHIFT(both)=lowest); lowers pitch an octave

exten => 1,1,Set(PITCH_SHIFT(rx)=0.8); lowers pitch
```

#### Syntax

```
PITCH_SHIFT(channel direction)
```

exten => 1,1,Set(PITCH\_SHIFT(tx)=1.5); raises pitch

#### Arguments

- channel direction Direction can be either rx, tx, or both. The direction can either be set to a valid floating point number between 0.1 and 4.0 or one of the enum values listed below. A value of 1.0 has no effect. Greater than 1 raises the pitch. Lower than 1 lowers the pitch. The pitch amount can also be set by the following values
  - highest
  - higher
  - high
  - low
  - lower
  - lowest

# Function\_POP

## POP()

## Synopsis

Removes and returns the last item off of a variable containing delimited text

## Description

# Example:

```
exten => s,1,Set(array=one,two,three)

exten => s,n,While($["$\{SET(var=$\{POP(array)\})\}" != ""])

exten => s,n,NoOp(var is ${var})

exten => s,n,EndWhile
```

This would iterate over each value in array, right to left, and would result in NoOp(var is three), NoOp(var is two), and NoOp(var is one) being executed.

## Syntax

```
POP(varname[,delimiter])
```

## Arguments

varnamedelimiter

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_PP\_EACH\_EXTENSION

## PP\_EACH\_EXTENSION()

#### Synopsis

Execute specified template for each extension.

## Description

Output the specified template for each extension associated with the specified MAC address.

## **Syntax**

PP\_EACH\_EXTENSION(mac,template)

#### Arguments

- mactemplate
- See Also

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_PP\_EACH\_USER

PP\_EACH\_USER()

## Synopsis

Generate a string for each phoneprov user.

## Description

Pass in a string, with phoneprov variables you want substituted in the format of %{VARNAME}, and you will get the string rendered for each user in phoneprov excluding ones with MAC address exclude\_mac. Probably not useful outside of res\_phoneprov.

Example: \${PP\_EACH\_USER(<item><fn>%{DISPLAY\_NAME}</fn></item>|\${MAC})

## Syntax

PP\_EACH\_USER(string,exclude\_mac)

#### Arguments

- stringexclude\_mac
- See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_PUSH

# PUSH()

#### Synopsis

Appends one or more values to the end of a variable containing delimited text

## Description

Example: Set(PUSH(array)=one,two,three) would append one, two, and three to the end of the values stored in the variable "array".

## **Syntax**

```
PUSH(varname[,delimiter])
```

#### Arguments

- varname
- delimiter

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_QUEUE\_EXISTS

## QUEUE\_EXISTS()

#### Synopsis

Check if a named queue exists on this server

## Description

Returns 1 if the specified queue exists, 0 if it does not

#### Syntax

```
QUEUE_EXISTS([queuename])
```

#### Arguments

queuename

#### See Also

Function\_QUEUE\_MEMBER\_PENALTY

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_QUEUE\_MEMBER

## QUEUE\_MEMBER()

#### Synopsis

Count number of members answering a queue.

#### Description

Returns the number of members currently associated with the specified *queuename*.

#### **Syntax**

QUEUE MEMBER (queuename, option)

#### Arguments

- queuename
- option
  - logged Returns the number of logged-in members for the specified queue.
  - free Returns the number of logged-in members for the specified queue that either can take calls or are currently wrapping up after a previous call.
  - ready Returns the number of logged-in members for the specified queue that are immediately available to answer a call.
  - count Returns the total number of members for the specified queue.

# Function\_QUEUE\_MEMBER\_COUNT

## QUEUE\_MEMBER\_COUNT()

#### Synopsis

Count number of members answering a queue.

## Description

Returns the number of members currently associated with the specified *queuename*.

This function has been deprecated in favor of the QUEUE\_MEMBER() function

## Syntax

```
QUEUE_MEMBER_COUNT(queuename)
```

#### Arguments

• queuename

#### See Also

## Function\_QUEUE\_MEMBER\_LIST

## QUEUE\_MEMBER\_LIST()

Synopsis

Returns a list of interfaces on a queue.

## Description

Returns a comma-separated list of members associated with the specified *queuename*.

#### **Syntax**

```
QUEUE_MEMBER_LIST(queuename)
```

#### Arguments

• queuename

## Function\_QUEUE\_VARIABLES

## QUEUE\_VARIABLES()

## Synopsis

Return Queue information in variables.

## Description

Makes the following queue variables available.

Returns 0 if gueue is found and setgueuevar is defined, -1 otherwise.

#### Syntax

QUEUE\_VARIABLES(queuename)

#### Arguments

- queuename
  - QUEUEMAX Maxmimum number of calls allowed.
  - QUEUESTRATEGY The strategy of the queue.
  - OUEUECALLS Number of calls currently in the queue.
  - QUEUEHOLDTIME Current average hold time.
  - QUEUECOMPLETED Number of completed calls for the queue.
  - QUEUEABANDONED Number of abandoned calls.
  - QUEUESRVLEVEL Queue service level.
  - QUEUESRVLEVELPERF Current service level performance.

# Function\_QUEUE\_WAITING\_COUNT

# QUEUE\_WAITING\_COUNT()

# Synopsis

Count number of calls currently waiting in a queue.

## Description

Returns the number of callers currently waiting in the specified *queuename*.

## Syntax

```
QUEUE_WAITING_COUNT([queuename])
```

# Arguments

queuename

#### See Also

## Function\_QUOTE

# QUOTE()

Synopsis

Quotes a given string, escaping embedded quotes as necessary

Description

Example: \${QUOTE(ab"c"de)} will return "abcde"

**Syntax** 

QUOTE(string)

## Arguments

• string

## See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_RAND

## RAND()

#### Synopsis

Choose a random number in a range.

#### Description

Choose a random number between *min* and *max*. *min* defaults to 0, if not specified, while *max* defaults to RAND\_MAX (2147483647 on many systems).

Example: Set(junky=\${RAND(1,8)}); Sets junky to a random number between 1 and 8, inclusive.

#### Syntax

```
RAND([min[,max]])
```

#### Arguments

- minmax
- See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## **Function REALTIME**

## **REALTIME()**

## Synopsis

RealTime Read/Write Functions.

## Description

This function will read or write values from/to a RealTime repository. REALTIME(....) will read names/values from the repository, and REALTIME(....)= will write a new value/field to the repository. On a read, this function returns a delimited text string. The name/value pairs are delimited by *delim1*, and the name and value are delimited between each other with delim2. If there is no match, NULL will be returned by the function. On a write, this function will always return NULL.

## **Syntax**

```
REALTIME(family,fieldmatch[,value[,delim1|field[,delim2]]])
```

## Arguments

- family
- fieldmatch
- value
- delim1 | field Use delim1 with delim2 on read and field without delim2 on write If we are reading and delim1 is not specified, defaults
  to ,
- delim2 Parameter only used when reading, if not specified defaults to =

#### See Also

```
Function_REALTIME_STORE
Function_REALTIME_DESTROY
Function_REALTIME_FIELD
Function_REALTIME_HASH
```

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_REALTIME\_DESTROY

REALTIME\_DESTROY()

Synopsis

RealTime Destroy Function.

## Description

This function acts in the same way as REALTIME(....) does, except that it destroys the matched record in the RT engine.

#### **Syntax**

```
REALTIME_DESTROY(family,fieldmatch[,value[,delim1[,delim2]]])
```

## Arguments

- $^{ullet}$  family
- fieldmatch
- value
- delim1
- delim2

#### See Also

```
Function_REALTIME
Function_REALTIME_STORE
Function_REALTIME_FIELD
Function_REALTIME_HASH
```

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_REALTIME\_FIELD

REALTIME\_FIELD()

Synopsis

RealTime query function.

#### Description

This function retrieves a single item, *fieldname* from the RT engine, where *fieldmatch* contains the value *value*. When written to, the REALTIME\_FIELD() function performs identically to the REALTIME() function.

#### Syntax

```
REALTIME_FIELD(family, fieldmatch, value, fieldname)
```

#### Arguments

- family
- fieldmatch
- value
- fieldname

#### See Also

```
Function_REALTIME
Function_REALTIME_STORE
Function_REALTIME_DESTROY
Function_REALTIME_HASH
```

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_REALTIME\_HASH

REALTIME\_HASH()

**Synopsis** 

RealTime query function.

#### Description

This function retrieves a single record from the RT engine, where *fieldmatch* contains the value *value* and formats the output suitably, such that it can be assigned to the HASH() function. The HASH() function then provides a suitable method for retrieving each field value of the record.

## Syntax

```
REALTIME_HASH(family,fieldmatch,value)
```

#### Arguments

- family
- fieldmatch
- value

#### See Also

Function\_REALTIME Function\_REALTIME\_STORE Function\_REALTIME\_DESTROY Function\_REALTIME\_FIELD

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_REALTIME\_STORE

REALTIME\_STORE()

Synopsis

RealTime Store Function.

#### Description

This function will insert a new set of values into the RealTime repository. If RT engine provides an unique ID of the stored record, REALTIME\_STORE(...)=.. creates channel variable named RTSTOREID, which contains value of unique ID. Currently, a maximum of 30 field/value pairs is supported.

#### Syntax

```
REALTIME_STORE(family,field1,fieldN[,...],field30)
```

## Arguments

- family
- field1
- fieldN
- field30

#### See Also

Function\_REALTIME Function\_REALTIME\_DESTROY Function\_REALTIME\_FIELD Function\_REALTIME\_HASH

## **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_REDIRECTING REDIRECTING() Synopsis Gets or sets Redirecting data on the channel. Description Gets or sets Redirecting data on the channel. The allowable values for the *reason* field are the following: Unknown Call Forwarding Busy Call Forwarding No Reply Callee is Unavailable Time of Day Do Not Disturb Call Deflection Follow Me Called DTE Out-Of-Order Callee is Away Call Forwarding By The Called DTE Call Forwarding Unconditional The allowable values for the *xxx-name-charset* field are the following: Unknown ISO8859-1 Withdrawn ISO8859-2

ISO8859-3

ISO8859-4

ISO8859-5

ISO8859-7

ISO10646 Bmp String

ISO10646 UTF-8 String

# Syntax

```
REDIRECTING(datatype[,i])
```

#### Arguments

- datatype The allowable datatypes are:
  - from-all

  - from-name
     from-name-valid
  - from-name-charset
  - from-name-pres

  - from-numfrom-num-valid
  - from-num-plan
  - from-num-pres

  - from-subaddr
     from-subaddr-valid
  - from-subaddr-type
  - $\bullet$  from-subaddr-odd
  - from-tagto-all

  - to-name
  - $^{ullet}$  to-name-valid
  - to-name-charset
  - to-name-pres
  - to-num
  - to-num-valid
  - to-num-plan
  - to-num-pres
  - to-subaddr
  - $^{ullet}$  to-subaddr-valid
  - to-subaddr-type
  - to-subaddr-odd
  - to-tag
  - reason
  - count
- i If set, this will prevent the channel from sending out protocol messages because of the value being set

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_REGEX

## REGEX()

#### Synopsis

Check string against a regular expression.

#### Description

Return 1 on regular expression match or 0 otherwise

Please note that the space following the double quotes separating the regex from the data is optional and if present, is skipped. If a space is desired at the beginning of the data, then put two spaces there; the second will not be skipped.

## **Syntax**

```
REGEX("regular expression", string)
```

## Arguments

"regular expression"string

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_REPLACE

# REPLACE()

#### Synopsis

Replace a set of characters in a given string with another character.

## Description

Iterates through a string replacing all the *find-chars* with *replace-char*. *replace-char* may be either empty or contain one character. If empty, all *find-chars* will be deleted from the output.

The replacement only occurs in the output. The original variable is not altered. The replacement only occurs in the output. The original variable is not altered.

#### Syntax

```
REPLACE(varname,find-chars[,replace-char])
```

#### Arguments

- varname
- find-chars
- replace-char

## See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SET

SET()

Synopsis

SET assigns a value to a channel variable.

Description

## **Syntax**

```
SET(varname[,value])
```

#### Arguments

- varname
- value

#### See Also

**Import Version** 

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SHA1

SHA1()

Synopsis

Computes a SHA1 digest.

Description

Generate a SHA1 digest via the SHA1 algorythm.

Example: Set(sha1hash=\${SHA1(junky)})

# Sets the asterisk variable sha1hash to the string

60fa5675b9303eb62f99a9cd47f9f5837d18f9a0 which is known as his hash

## Syntax

SHA1(data)

#### Arguments

• data - Input string

#### See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SHARED

## SHARED()

## Synopsis

Gets or sets the shared variable specified.

## Description

Implements a shared variable area, in which you may share variables between channels.

The variables used in this space are separate from the general namespace of the channel and thus The variables used in this space are separate from the general namespace of the channel and thus None - SHARED(foo) and The variables used in this space are separate from the general namespace of the channel and thus None - foo represent two completely different variables, despite sharing the same name.

Finally, realize that there is an inherent race between channels operating at the same time, fiddling with each others' internal variables, which is why this special variable namespace exists; it is to remind you that variables in the SHARED namespace may change at any time, without warning. You should therefore take special care to ensure that when using the SHARED namespace, you retrieve the variable and store it in a regular channel variable before using it in a set of calculations (or you might be surprised by the result).

## **Syntax**

SHARED(varname[,channel])

#### Arguments

- varname Variable name
- channel If not specified will default to current channel. It is the complete channel name: SIP/12-abcd1234 or the prefix only SIP/12.

## See Also

## Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_SHELL

## SHELL()

#### Synopsis

Executes a command as if you were at a shell.

#### Description

Returns the value from a system command

## Example:

```
Set(foo=${SHELL(echo \bar)})
```

When using the SHELL() dialplan function, your \SHELL\ is /bin/sh, which may differ as to the underlying shell, depending upon your production platform. Also keep in mind that if you are using a common path, you should be mindful of race conditions that could result from two calls running SHELL() simultaneously. When using the SHELL() dialplan function, your \SHELL\ is /bin/sh, which may differ as to the underlying shell, depending upon your production platform. Also keep in mind that if you are using a common path, you should be mindful of race conditions that could result from two calls running SHELL() simultaneously.

#### Syntax

```
SHELL(command)
```

#### Arguments

command - This is the argument to the function, the command you want to pass to the shell.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_SHIFT

## SHIFT()

## Synopsis

Removes and returns the first item off of a variable containing delimited text

## Description

# Example:

```
exten => s,1,Set(array=one,two,three)
```

```
exten => s,n,While(["$\SET(var=$\SHIFT(array))])" != ""])
```

```
exten => s,n,NoOp(var is ${var})
```

exten => s,n,EndWhile

This would iterate over each value in array, left to right, and would result in NoOp(var is one), NoOp(var is two), and NoOp(var is three) being executed.

### Syntax

```
SHIFT(varname[,delimiter])
```

#### Arguments

- varname
- delimiter

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SIP\_HEADER

# SIP\_HEADER()

### Synopsis

Gets the specified SIP header from an incoming INVITE message.

### Description

Since there are several headers (such as Via) which can occur multiple times, SIP\_HEADER takes an optional second argument to specify which header with that name to retrieve. Headers start at offset 1.

#### **Syntax**

```
SIP_HEADER(name[,number])
```

#### Arguments

- name
- number If not specified, defaults to 1.

## See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r338609.

# Function\_SIPCHANINFO

# SIPCHANINFO()

Synopsis

Gets the specified SIP parameter from the current channel.

### Description

### **Syntax**

SIPCHANINFO(item)

#### Arguments

- item
  - peerip The IP address of the peer.
  - recvip The source IP address of the peer.
  - from The URI from the From: header.
  - uri The URI from the Contact: header.
  - useragent The useragent.
  - peername The name of the peer.
  - t38passthrough 1 if T38 is offered or enabled in this channel, otherwise 0.

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SIPPEER

# SIPPEER()

Synopsis

Gets SIP peer information.

### Description

#### Syntax

SIPPEER(peername[,item])

### Arguments

- peername
- item
  - ip (default) The ip address.
  - port The port number.
  - mailbox The configured mailbox.
  - context The configured context.
  - expire The epoch time of the next expire.
  - dynamic Is it dynamic? (yes/no).
  - callerid\_name The configured Caller ID name.

- callerid\_num The configured Caller ID number.
- callgroup The configured Callgroup.
- pickupgroup The configured Pickupgroup.
- codecs The configured codecs.
- status Status (if qualify=yes).
- regexten Registration extension.
- limit Call limit (call-limit).
- busylevel Configured call level for signalling busy.
- curcalls Current amount of calls. Only available if call-limit is set.
- language Default language for peer.
- account code Account code for this peer.
- useragent Current user agent id for peer.
- maxforwards The value used for SIP loop prevention in outbound requests
- chanvarname A channel variable configured with setvar for this peer.
- codecx Preferred codec index number x (beginning with zero).

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SMDI\_MSG

## SMDI\_MSG()

## **Synopsis**

Retrieve details about an SMDI message.

### Description

This function is used to access details of an SMDI message that was pulled from the incoming SMDI message queue using the SMDI\_MSG\_RETRIEVE() function.

### **Syntax**

SMDI\_MSG(message\_id,component)

#### Arguments

- message\_id
- component Valid message components are:
  - number The message desk number
  - terminal The message desk terminal
  - station The forwarding station
  - callerid The callerID of the calling party that was forwarded
  - type The call type. The value here is the exact character that came in on the SMDI link. Typically, example values are:
     Options:
    - D Direct Calls
    - A Forward All Calls
    - B Forward Busy Calls
    - N Forward No Answer Calls

#### See Also

# Function\_SMDI\_MSG\_RETRIEVE

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SMDI\_MSG\_RETRIEVE

SMDI\_MSG\_RETRIEVE()

Synopsis

Retrieve an SMDI message.

### Description

This function is used to retrieve an incoming SMDI message. It returns an ID which can be used with the SMDI\_MSG() function to access details of the message. Note that this is a destructive function in the sense that once an SMDI message is retrieved using this function, it is no longer in the global SMDI message queue, and can not be accessed by any other Asterisk channels. The timeout for this function is optional, and the default is 3 seconds. When providing a timeout, it should be in milliseconds.

The default search is done on the forwarding station ID. However, if you set one of the search key options in the options field, you can change this behavior.

#### Syntax

```
SMDI_MSG_RETRIEVE(smdi port,search key[,timeout[,options]])
```

#### Arguments

- smdi port
- search key
- timeout
- options
  - t Instead of searching on the forwarding station, search on the message desk terminal.
  - $\bullet\hspace{0.2cm}$  n Instead of searching on the forwarding station, search on the message desk number.

# **Function SORT**

SORT()

#### Synopsis

Sorts a list of key/vals into a list of keys, based upon the vals.

### Description

Takes a comma-separated list of keys and values, each separated by a colon, and returns a comma-separated list of the keys, sorted by their values. Values will be evaluated as floating-point numbers.

### Syntax

```
SORT(key1val1[,key2val2[,...]])
```

#### Arguments

- keyval
  - key1val1
- keyvaln
- ' keyvaın • kev
  - val

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH

# SPEECH()

### Synopsis

Gets information about speech recognition results.

#### Description

Gets information about speech recognition results.

### Syntax

```
SPEECH(argument)
```

#### Arguments

- argument
  - status Returns 1 upon speech object existing, or 0 if not
  - spoke Returns 1 if spoker spoke, or 0 if not
  - results Returns number of results that were recognized.

#### See Also

#### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH\_ENGINE

# SPEECH\_ENGINE()

Synopsis

Change a speech engine specific attribute.

Description

Changes a speech engine specific attribute.

### Syntax

```
SPEECH_ENGINE(name)
```

#### Arguments

• name

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH\_GRAMMAR

# SPEECH\_GRAMMAR()

Synopsis

Gets the matched grammar of a result if available.

## Description

Gets the matched grammar of a result if available.

# Syntax

```
SPEECH_GRAMMAR([nbest_number,result_number])
```

#### Arguments

- nbest\_numberresult\_number
- See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH\_RESULTS\_TYPE

# SPEECH\_RESULTS\_TYPE()

Synopsis

Sets the type of results that will be returned.

### Description

Sets the type of results that will be returned. Valid options are normal or nbest.

#### Syntax

```
SPEECH_RESULTS_TYPE()
```

Arguments

See Also

Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH\_SCORE

## SPEECH\_SCORE()

Synopsis

Gets the confidence score of a result.

Description

Gets the confidence score of a result.

### **Syntax**

```
SPEECH_SCORE([nbest_number,result_number])
```

### Arguments

- nbest\_numberresult\_number
- See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SPEECH\_TEXT

## SPEECH\_TEXT()

Synopsis

Gets the recognized text of a result.

Description

Gets the recognized text of a result.

#### Syntax

```
SPEECH_TEXT([nbest_number,result_number])
```

#### Arguments

- nbest\_number
- result\_number

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function SPRINTF**

# SPRINTF()

Synopsis

Format a variable according to a format string.

### Description

Parses the format string specified and returns a string matching that format. Supports most options found in **sprintf(3)**. Returns a shortened string if a format specifier is not recognized.

### Syntax

```
SPRINTF(format,arg1[,arg2[,...][,argN]])
```

### Arguments

- format
- arg1
- arg2
- argN

#### See Also

sprintf(3)

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SQL\_ESC

SQL\_ESC()

### Synopsis

Escapes single ticks for use in SQL statements.

# Description

Used in SQL templates to escape data which may contain single ticks ' which are otherwise used to delimit data.

Example: SELECT foo FROM bar WHERE baz='\${SQL\_ESC(\${ARG1})}'

### **Syntax**

SQL\_ESC(string)

### Arguments

• string

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SRVQUERY

# SRVQUERY()

## Synopsis

Initiate an SRV query.

### Description

This will do an SRV lookup of the given service.

### **Syntax**

SRVQUERY(service)

#### Arguments

• service - The service for which to look up SRV records. An example would be something like \_sip.\_udp.example.com

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_SRVRESULT

# SRVRESULT()

### Synopsis

Retrieve results from an SRVQUERY.

### Description

This function will retrieve results from a previous use of the SRVQUERY function.

### Syntax

SRVRESULT(id,resultnum)

### Arguments

- id The identifier returned by the SRVQUERY function.
- resultnum The number of the result that you want to retrieve. Results start at 1. If this argument is specified as getnum, then it will
  return the total number of results that are available.

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_STAT

# STAT()

### Synopsis

Does a check on the specified file.

### Description

### **Syntax**

```
STAT(flag,filename)
```

#### Arguments

- flag Flag may be one of the following: d Checks if the file is a directory. e Checks if the file exists. f Checks if the file is a regular file. m Returns the file mode (in octal) s Returns the size (in bytes) of the file A Returns the epoch at which the file was last accessed.
   C Returns the epoch at which the inode was last changed. M Returns the epoch at which the file was last modified.
- filename

#### See Also

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

## Function\_STRFTIME

## STRFTIME()

### Synopsis

Returns the current date/time in the specified format.

#### Description

STRFTIME supports all of the same formats as the underlying C function **strftime(3)**. It also supports the following format:

%nq - fractions of a second, with leading zeros.

# Example:

\$3q will give milliseconds and \$1q will give tenths of a second. The default is set at milliseconds (n=3). The common case is to use it in combination with %S, as in \$S.\$3q.

### **Syntax**

```
STRFTIME([epoch[,timezone[,format]]])
```

#### Arguments

- epoch
- timezone
- format

### See Also

strftime(3)

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_STRPTIME

# STRPTIME()

#### Synopsis

Returns the epoch of the arbitrary date/time string structured as described by the format.

### Description

This is useful for converting a date into EPOCH time, possibly to pass to an application like SayUnixTime or to calculate the difference between the two date strings

Example: \${STRPTIME(2006-03-01 07:30:35,America/Chicago,%Y-%m-%d %H:%M:%S)} returns 1141219835

### Syntax

```
STRPTIME(datetime,timezone,format)
```

#### Arguments

- datetime
- timezone
- format

### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# **Function SYSINFO**

# SYSINFO()

## **Synopsis**

Returns system information specified by parameter.

### Description

Returns information from a given parameter.

## Syntax

```
SYSINFO(parameter)
```

### Arguments

- parameter
  - loadavg System load average from past minute.

- numcalls Number of active calls currently in progress.
- uptime System uptime in hours. This parameter is dependant upon operating system. This parameter is dependant upon operating system.
- totalram Total usable main memory size in KiB. This parameter is dependant upon operating system. This parameter is dependant upon operating system.
- freeram Available memory size in KiB. This parameter is dependant upon operating system. This parameter is dependant upon operating system.
- bufferram Memory used by buffers in KiB. This parameter is dependant upon operating system. This parameter is dependant upon operating system.
- total swap Total swap space still available in KiB. This parameter is dependent upon operating system. This parameter is dependent upon operating system.
- freeswap Free swap space still available in KiB. This parameter is dependant upon operating system. This parameter is dependant upon operating system.
- numprocs Number of current processes. This parameter is dependent upon operating system. This parameter is dependent upon operating system.

## **Function TESTTIME**

### TESTTIME()

### Synopsis

Sets a time to be used with the channel to test logical conditions.

### Description

To test dialplan timing conditions at times other than the current time, use this function to set an alternate date and time. For example, you may wish to evaluate whether a location will correctly identify to callers that the area is closed on Christmas Day, when Christmas would otherwise fall on a day when the office is normally open.

#### Syntax

TESTTIME(date time[,zone])

#### Arguments

- date Date in ISO 8601 format
- time Time in HH:MM:SS format (24-hour time)
- zone Timezone name

#### See Also

# Application\_GotolfTime

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_TIMEOUT

## TIMEOUT()

### Synopsis

Gets or sets timeouts on the channel. Timeout values are in seconds.

### Description

The timeouts that can be manipulated are:

absolute: The absolute maximum amount of time permitted for a call. Setting of 0 disables the timeout. digit: The maximum amount of time permitted between digits when the user is typing in an extension. When this timeout expires, after the user has started to type in an extension, the extension will be considered complete, and will be interpreted. Note that if an extension typed in is valid, it will not have to timeout to be tested, so typically at the expiry of this timeout, the extension will be considered invalid (and thus control would be passed to the i extension, or if it doesn't exist the call would be terminated). The default timeout is 5 seconds. response: The maximum amount of time permitted after falling through a series of priorities for a channel in which the user may begin typing an extension. If the user does not type an extension in this amount of time, control will pass to the t extension if it exists, and if not the call would be terminated. The default timeout is 10 seconds.

### Syntax

TIMEOUT(timeouttype)

### Arguments

 timeouttype - The timeout that will be manipulated. The possible timeout types are: absolute, digit or response

# **Function TOLOWER**

## TOLOWER()

### Synopsis

Convert string to all lowercase letters.

#### Description

Example: \${TOLOWER(Example)} returns "example"

### **Syntax**

TOLOWER(string)

#### Arguments

• string

#### See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_TOUPPER

## TOUPPER()

Synopsis

Convert string to all uppercase letters.

### Description

Example: \${TOUPPER(Example)} returns "EXAMPLE"

### **Syntax**

TOUPPER(string)

#### Arguments

• string

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_TRYLOCK

## TRYLOCK()

### Synopsis

Attempt to obtain a named mutex.

## Description

Attempts to grab a named lock exclusively, and prevents other channels from obtaining the same lock. Returns 1 if the lock was available or 0 otherwise.

### **Syntax**

TRYLOCK(lockname)

#### Arguments

• lockname

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_TXTCIDNAME

# **TXTCIDNAME()**

### Synopsis

TXTCIDNAME looks up a caller name via DNS.

# Description

This function looks up the given phone number in DNS to retrieve the caller id name. The result will either be blank or be the value found in the TXT record in DNS.

### **Syntax**

TXTCIDNAME(number[,zone-suffix])

#### Arguments

- number
- zone-suffix If no zone-suffix is given, the default will be e164.arpa

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_UNLOCK

# UNLOCK()

### Synopsis

Unlocks a named mutex.

### Description

Unlocks a previously locked mutex. Returns 1 if the channel had a lock or 0 otherwise.

It is generally unnecessary to unlock in a hangup routine, as any locks held are automatically freed when the channel is destroyed. It is generally unnecessary to unlock in a hangup routine, as any locks held are automatically freed when the channel is destroyed.

#### Syntax

UNLOCK(lockname)

### Arguments

• lockname

#### See Also

#### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_UNSHIFT

# **UNSHIFT()**

### Synopsis

Inserts one or more values to the beginning of a variable containing delimited text

# Description

Example: Set(UNSHIFT(array)=one,two,three) would insert one, two, and three before the values stored in the variable "array".

## Syntax

UNSHIFT(varname[,delimiter])

### Arguments

- varnamedelimiter
- See Also

### **Import Version**

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_URIDECODE

# URIDECODE()

### Synopsis

Decodes a URI-encoded string according to RFC 2396.

# Description

Returns the decoded URI-encoded data string.

## **Syntax**

```
URIDECODE(data)
```

#### Arguments

• data - Input string to be decoded.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_URIENCODE

# **URIENCODE()**

## Synopsis

Encodes a string to URI-safe encoding according to RFC 2396.

### Description

Returns the encoded string defined in data.

#### Syntax

URIENCODE(data)

#### Arguments

• data - Input string to be encoded.

### See Also

# Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_VALID\_EXTEN

# VALID\_EXTEN()

#### Synopsis

Determine whether an extension exists or not.

### Description

Returns a true value if the indicated *context*, *extension*, and *priority* exist.

### **Syntax**

```
VALID_EXTEN([context,extension[,priority]])
```

#### Arguments

- context Defaults to the current context
- extension
- priority Priority defaults to 1.

#### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_VERSION

## **VERSION()**

### Synopsis

Return the Version info for this Asterisk.

### Description

If there are no arguments, return the version of Asterisk in this format: SVN-branch-1.4-r44830M

Example: Set(junky=\${VERSION()};

Sets junky to the string SVN-branch-1.6-r74830M, or possibly, SVN-trunk-r45126M.

#### Syntax

```
VERSION([info])
```

#### Arguments

- info The possible values are:
  - ASTERISK\_VERSION\_NUM A string of digits is returned (right now fixed at 999999).
  - BUILD\_USER The string representing the user's name whose account was used to configure Asterisk, is returned.

- BUILD\_HOSTNAME The string representing the name of the host on which Asterisk was configured, is returned.
- BUILD\_MACHINE The string representing the type of machine on which Asterisk was configured, is returned.
- BUILD\_OS The string representing the OS of the machine on which Asterisk was configured, is returned.
- BUILD\_DATE The string representing the date on which Asterisk was configured, is returned.
- BUILD\_KERNEL The string representing the kernel version of the machine on which Asterisk was configured, is returned.

# Function\_VMCOUNT

# VMCOUNT()

#### Synopsis

Count the voicemails in a specified mailbox.

### Description

Count the number of voicemails in a specified mailbox, you could also specify the *context* and the mailbox *folder*.

## Example:

```
exten => s,1,Set(foo=${VMCOUNT(125)})
```

## **Syntax**

```
VMCOUNT(vmbox[@context][,folder])
```

### Arguments

- vmbox
  - vmbox
  - context If not specified, defaults to default.
- folder If not specified, defaults to INBOX

### See Also

### Import Version

This documentation was imported from Asterisk version SVN-branch-1.8-r311874.

# Function\_VOLUME

## VOLUME()

### Synopsis

Set the TX or RX volume of a channel.

## Description

The VOLUME function can be used to increase or decrease the tx or rx gain of any channel.

For example:

Set(VOLUME(TX)=3)

Set(VOLUME(RX)=2)

Set(VOLUME(TX,p)=3)

Set(VOLUME(RX,p)=3>

### Syntax

```
VOLUME(direction[,options])
```

# Arguments

- direction Must be TX or RX.
- $^{ullet}$  options
  - p Enable DTMF volume control
